Preface

The Annual Survey of Industries (ASI) , being the prime source of Industrial Statistics in the Indian Economy provides information on various aspects of the original industrial sector prevailing in India separately by the States a specified region. The present volume is based on the results of ASI 2005-06, Kerala received from the Central Statistical Organisation (CSO) (IS Wing), Kolkata and their findings. The information would be useful in the context of Planning, which usually aims at removing Regional imbalances and also for identifying the proper areas where investments could be effective and meaningful.

The Annual Survey of Industries provides the basic statistics of Industrial Sector. It provides information to assess, evaluate, composition and structure of organised manufacturing process and repair services. The survey is conducted annually under the statutory provisions of the Collection of Statistical Act 1953 and the Rules framed there under in 1959. National Sample Survey Organisation (NSSO), Field Operations Division (FOD) is conducting the survey at National Level.

This report was prepared by Sri.S.Anirudhan, Assistant Director; Smt.C.Sathi Devi and Rajendran Kuttikkadu Research Assistants and Sri. Jineesh. V. K., Statistical Assistant Grade II in the ASI division with the guidance of Smt. K.Sathyabhama, Additional Director. Constructive suggestions to improve this publication are always welcome.

CHAPTER - 1

Scope and Coverage

1.Introduction:

The Annual Survey of Industries, the principal source of Industrial Statistics in India provides statistical information to assess and evaluate, objectively and realistically, the changes in the growth, composition and structure of organised manufacturing sector comprising activities related to manufacturing process, repair services, gas and water supply and cold storage. The survey is conducted annually under the Statutory Provisions of the Collection of Statistics Act, 1953 and the Rules framed there under in 1959 except in the State of Jammu and Kashmir where it is conducted under the Jammu and Kashmir Collection of Statistics Act, 1961 and Rules framed there under in 1964.

2.Historical Background:

Understanding the importance of collection and compilation of data relating to industrial sector of the country, the Government of India after 1930, launched a voluntary scheme for all collection of detailed data from important industries in India. The Census Manufacturing Industries (CMI) conducted under the Industrial Statistics Act, 1942 and Rules framed there under. While the responsibility for collection of the returns and their verification rested with the Statistics Authorities in the States, the Directorate of Industrial Statistics at the Centre was in charge of co-ordination, technical guidance and publication of results.

The CMI was conducted for the accounting years (calendar years). With the implementation of the Factories Act, 1948 the scope of CMI was extended. The frame for the census was the list of factories classified according to the industries maintained by the Chief Inspector of Factories. The criterion of classification of factory was the value of its principal products.

A closely related survey called the Sample Survey of Manufacturing Industries (SSMI) was also conducted according to the need arose from the urgent requirements of the National Income Committee for Statistics relating to the manufacturing industries for the estimation of the contribution from industries to the national income. With the implementation of the Factories Act, 1948 the SSMI covered the factories registered under Section 2m (i) and 2 m (ii).

After independence, Central Statistical Organisation (CSO) was set up under the Cabinet Secretariat by the Government of India in 1951 as an apex statistical body for co-ordinating the large variety of data collected by various agencies, which was necessitated for adoption of planned economy by the Government. In 1956, the Industrial Statistics Act, 1942 was repealed with the passing of a more comprehensive collection of Statistics Act, 1953. Subsequently Directorate of Industrial Statistics was transferred to the Cabinet Secretariat in 1959 and was attached to Central Statistical Organisation as Industrial Statistics Wing.

3. Census of Manufacturing Industries (CMI):

The Directorate of Industrial Statistics launched the Census Manufacturing Industries (CMI) in 1946 with the objective of studying the structure of the Indian industry and estimating its contribution to national income. Because of practical difficulties, the CMI could cover only 29 of the 63 industry groups specified in the Industrial Statistics Act and extended only to 11 States of the Indian Union. It was conducted annually up to the year 1958. Afterwards, the geographical coverage of the CMI extended to 13 States and 2 Union Territories.

4. Sample Survey of Manufacturing Industries (SSMI) :

Following the recommendations of the National Income Committee (1949), the Directorate of Industrial Statistics conducted the first SSMI in 1949 for collecting data from factories falling under the 34 industry groups left out by the CMI and defined under the Factories Act 1934. The technical work including the survey design, sample selection and preparation of schedules was undertaken by the Directorate of Industrial Statistics while the tabulation and analysis of data, report writing etc. was carried out by the Indian Statistical Institute, Calcutta. The SSMI was conducted annually up to the year 1958 by the then Directorate of National Sample Survey (now the NSS Organisation). The sampling design adopted envisaged classification of establishments in each of the industries into groups according to the number of workers employed. For industries with marked concentration in particular areas, a further grouping according to States was also done.

ASI refers to the factories defined in accordance with the Indian Factories Act, 1948 and thus has coverage wider than that of the CMI and the SSMI put together and substituted

both the CMI and the Sample Survey of Manufacturing Industries (SSMI). The ASI in its present form started in 1960 with 1959 as the reference year and is continuing since then except for the ASI 1972. The Directorate of Industrial Statistics was transferred to CSO in 1957 and renamed as CSO (IS Wing). ASI has replaced both the CMI and SSMI.

5. Annual Survey of Industries:

The Annual Survey of Industries (ASI) is a Statutory Survey conducted under the provisions of the Collection of Statistics Act, 1953 and Rules framed there under in 1959. Deputy Director General (FOD) functions as the Statistics Authority under the Act for the conduct of the ASI. ASI is a record based inquiry. This scheme covers the units registered under the following Acts.

- a) Factories registered under Section 2 m (i) and 2 m (ii) of the Indian Factories Act , 1948 ie., those factories employing 10 or more workers with power and those employing 20 or more workers and without power respectively.

and

- b) Bidi and Cigar Establishments registered under Bidi and Cigar Workers (condition of employment) Act, 1966.

The survey covers entire country except States /Union Territories of Arunachal Pradesh, Mizoram, Sikkim, and Lakshadweep.

The ASI data are collected in 2 parts namely, Part I relating to Capital, Employment, and Emoluments, Consumption of Fuels, Lubricants and Raw Materials, other Inputs /Outputs, Value Added for use of Central Statistical Organisation and other agencies while Part II relates to Labour turnover, Absenteeism, Labour Cost etc. for use of Labour Bureau. In addition, information on certain key items are collected through a SHORT Schedules on a priority basis for quick tabulation from 1999-2000 onwards. The ASI refers to the factories defined in accordance with the Factories Act, 1948 and thus has coverage wider than that of the CMI and SSMI put together.

6. Scope and Coverage:

The Annual Survey of Industries covers the entire factory sector comprising factories sector comprising factories registered under section 2 m (i) and 2 m (ii) of the Factories Act, 1948. The coverage of the factory sector extends not only to manufacturing units but also to

others, categorized under services such as those engaged in water supply, sanitary services, motion picture production, laundering, job-dyeing and electricity undertaking. However from 1998-99 onwards all electricity undertaking engaged in generation, transmission and distribution of electricity registered with Central Electricity Authority (CEA) are being excluded. Similarly, Defense installations, technical training institutes, establishments engaged in hotel and café services, and Storage and distribution of oil are not covered. However, the Bidi and Cigar units covered under Bidi and Cigar Workers (condition of employment) Act, 1966 are surveyed under ASI. Geographically the survey covers the entire country, except States/Union Territories of Arunachal Pradesh, Mizoram, Sikkim, and Lakshadweep. From 1998-99 onwards the departmental units such as Railway workshops, RTC workshops, Government mints, Sanitary, water supply, gas storage etc. are not covered, as there are alternative sources of their data compilation for the GDP estimates by the National Accounts Division of CSO.

7. ASI Frame and its updation:

The ASI frame is based on the lists of registered factories /units maintained by the Chief Inspector of Factories (CIF) in each State and those maintained by licensing authorities in respect of Bidi and Cigar Establishments and electricity undertakings. Availability of a complete and up-to-date frame listing all the eligible units is an essential prerequisite for any large-scale survey. In fact, availability of proper frame is one of the most critical requirements for working out correct multiplier to arrive at proper estimate. Regional offices of FOD (NSSO) maintain close liaison with Chief Inspector of Factories in updating the frame every year. ASI frame should be complete and error free.

8. Sampling Design:

The Sampling Design adopted for ASI has undergone considerable changes from time to time taking into account technical and other requirements. The Technical Group on Revision of Sampling Design of ASI recommended a revised Sampling Design in 1997-98. The salient features of stratification of the population for selection of units are (i) Census Sector and (ii) Sample Sector.

9. Census Sector:

- (i) For industrially less developed States/Uts:
 - a). All industrial units of less industrially developed 12 States/Uts and
- (ii) For States /UTS other than those industrially less developed States /Uts,
 - b). Industrial units having 200 or more workers
- (iii) & (c) .All electricity undertakings and PSUs (Public Sector Undertaking) not covered as above ie. industrial units not having 200 or more workers.

Further the sector includes industrial units having significant input/ output/GVA/NVA which would jointly contribute to industrial units having 200 or more workers and electricity undertakings and PSUs not covered under industrial units not having 200 or more workers, not less than 90% of NVA within a State. All units with 50 or more workers operating with power and units having 100 or more workers operating without power were covered under Census Sector.

10. Sample sector

All industrial units of the entire ASI of the entire ASI frame minus the industrial units of the Census Sector formed the Sample Sector. State X industry constitutes the stratum in the Sample Sector. The sample size is first decided for each industry group at all India level and sample size for each industry within each State (stratum) is allocated in proportion to sampling variation measured in terms of RSE (Relative Standard Error) but not the number of factories. CSO (IS Wing) is responsible for selection of units in accordance with sampling design recommended by expert committee from time to time. Generally there is a certain minimum coverage in the stratum and appropriate adjustment may be made by amalgamating industries of similar nature, wherever necessary, using a circular systematic sampling technique.

Sample Sector comprised of 50 / 100 workers operating with or without power in the major states was covered fully. In 1997-98 a consensus decision has been taken so as not to attempt for the district level estimates. This design has been more or less continued in 2003-04 with the modification that the Census Sector was defined to include units having 100 or

more workers, instead of 200 or more workers and only 5 industrially backward States/Uts namely Manipur, Meghalaya, Nagaland, Tripura and Andaman Nicobar Islands were covered in the Census Sector. The Public Sector Undertakings were also covered in the general scheme i.e., units having 100 or more workers in Census Sector and rest in Sample Sector.

The entire sample was selected in the form of two independent sub-sample using Circular Systematic Sampling Method. Sub-samples were one or more same units were selected in both the sub-samples were discarded and fresh sub-samples were drawn.

11. Industrial Classification:

A standard Industrial Classification is essential for developing a proper database in any country. Such classifications are frequently used in classifying the economically active population, statistics of industrial production and distribution, the different fields of labour statistics and other economic data such as national income. Comparability of statistics available from various sources, on different aspects of the economy, and usability of such data for economic analysis are prerequisites for standardization of a system of classification. The classification of economic activity is under 3 broad categories namely,

- 1) Primary Production (Agriculture and Mining)
- 2) Secondary Production (Manufacturing and Construction)
- 3) Services (Transport, Commerce, and Administration etc.)

The Central Statistical Organisation (CSO) which is responsible for co-ordination of statistical activities in the country as well as for evolving and maintaining statistical standards took up the task of evolving a standard industrial classification as early as in 1960 and evolved a Standard Industrial Classification (SIC) in 1962. Considering the significant changes in the organisation and structure of the industries the necessity to revise the industrial classification has been felt from time to time and the SIC 1962 revised in the years 1970, 1987, and 1998. The latest classification, i.e., NIC 1998 developed on the basis of UNISIC 1990(Rev.3) has been adopted from ASI 1998-99.

12. Reference Period and Schedule of Enquiry:

In the beginning the Reference Period for the ASI was the Calendar Year for all items except fixed assets and working capital for which it was the accounting year. After a careful study of the relevant issues the reference year was changed to the financial year for all the

items with effect from ASI 1988-89 and for ASI Part II data it continues to be calendar year. Reference Period for ASI 2005-06 is the accounting year of the factory ending on any day during the fiscal year 2005-06. Thus ASI 2005-06 data collected from the respective establishment relate to their accounting year ended on any day between 1st April 2005 and 31st March 2006. Survey conducted in the year 2006-07.

The schedule has been designed to meet substantially the national and international requirements for industrial data. ASI schedule is the basic tool to collect desired data. A comprehensive schedule has been devised to collect ASI data. ASI schedule consists of different parts. In the initial rounds the schedule sought particulars relating to manufacturing activity only. Over the years, additions were made to meet the specific data requirements of various organizations. By the year 1973-74 the schedule consisted of 5 parts:

1. Part I on Manufacturing
2. Part II on Labour Turn over
3. Part III on Stocks and Consumption of components and accessories in small-scale sector.
4. Part IV on Construction expenditure and
5. Part V on Indirect Taxes, Sales subsidies and capacity of power equipment installed.

It was felt that ASI schedule had become too lengthy and complicated. So modifications made in the schedule consisting of 3 parts namely, Part I covering data on Manufacturing activities, Part II covering Labour and Part III covering Construction which was adopted in 1974-75. Part III was canvassed until ASI 1997-98 after which it was dropped for want of finalizations of the exact data requirements by NBO (National Buildings Organisation). Thus from ASI 1998-99 onwards only Part I and Part II are being canvassed in addition to a "Short Schedule" which has been introduced from ASI 1999-2000 with a view to collect data on certain key parameters, mainly for the purpose of preparing quick GDP estimates. In a view of the urgent requirement of such data, it was decided to accept the provisional wherever actual audited data was not available. Appropriate action is taken before each ASI round, to implement necessary revisions and modifications in response to specific data demands.

13. Unit of Enumeration:

The Primary Unit of Enumeration in the survey is a Factory in the case of manufacturing industries, a Workshop in the case of repair services, an undertaking or a licensee in the case of electricity, gas and water supply undertakings an establishment in the case of Bidi and Cigar industries. The owner of two or more establishments located in the same region and pertaining in the same industry group and belonging to the same scheme (Census or Sample) was however, permitted to furnish a single consolidated return called "Joint Return". Wherever different parts of single integration unit of production are registered as different factories the owner is permitted to submit a single return for the whole unit provided the constituent factories are located in the same State.

14. Form of Returns

The returns are submitted in the prescribed form for the purpose of ASI under the collection of Statistics (Central) rules 1959. As the data relating to a single factory cannot be published in a view of restrictive class in the Act, safeguarding the interest of the owners, the industries in such case had been combined and data published for a group of industries.

State Government participates in the survey programme in a scale to commensurate with their requirements. Our department has started collection of data under this scheme with effect from 2000 onwards. The State Level Co-ordination Committee (SLCC) is the nodal agency, co-coordinating the fieldwork of ASI in the State. Principal Secretary to Government, Industries Department is the Chairman of the SLCC

15. Limitations:

As the data relating to less than 3 units in an industry group cannot be published, the data in respect of such industrial units are combined with the nearest sub-group of group keeping the nearness in the line of production as far as possible. Also as the figures were rounded up to the nearest integer at various levels of aggregates during the course of tabulation, there might be slight variation in the total presented at higher level of aggregation and the sums of corresponding constituents showing different tables.

14. Workers:

Workers are defined to include all persons employed directly or through any agency whether for wages or not and engaged in any manufacturing process or in cleaning any part of the machinery or premises used for manufacturing process or in any other kind of work incidental to or connected with the manufacturing process or the subject of the manufacturing process. Labour engaged in the repair and maintenance or production of fixed assets for factory's own use or labour employed for generating electricity or producing coal, gas etc. are included.

15. Employees:

Employees include all workers defined above and persons receiving wages and holding supervisory or managerial positions engaged in administrative office, store keeping section and welfare section, sales department as also those engaged in purchase of raw materials etc. or purchase of fixed assets for the factory and watch and ward staff.

Total Persons engaged includes the employees as defined above and all working proprietors and their family members who are actively engaged in the work of the factory even without any pay and the unpaid members of the co-operative societies who worked in or for the factory in any direct or productive capacity. The number of workers or employees is an average number obtained by dividing man-days worked by the number of days the factory had worked during the reference year.

17. Man days:

Man-days represent the total number of days worked and the number of days paid for during the accounting year. It is obtained by summing up the number of persons of specified categories attending in each shift over all the shifts worked on all days.

18. Wages and Salaries:

It also excludes imputed value of benefits in kind, employer's contribution to old age benefits and other social security charges, direct expenditure on maturity benefits, crèches and other group benefits, traveling and other expenditure incurred for business purposes and reimbursed by the employer are excluded. The above three table shows the structural ratios and technical co efficient by major economic activities during the year 2005-06. The fixed capital utilised by each factory in the manufacturing sector is Rs 145.50 Lakhs and in other sector it is Rs. 240.55 Lakhs. Gross output per factory shows an amount of Rs.855.14 Lakhs in the manufacturing sector while it is Rs.477.69 Lakhs in the other sector. Thus manufacturing sector has a prime role in the case of gross output per factory. The number of workers and persons engaged per factory is higher in the manufacturing sector, than in other sector. But in the case of net value added per factory in the manufacturing sector is Rs 85.09 Lakh only whereas Rs125.34 Lakh in the other sector during the year 2005-06

Fixed capital per person engaged, Gross output per person engaged, Net value added per person engaged, and wages per worker all show an increase in other sectors than in manufacturing sector. The ratio of fixed capital to net value added is high in the other sector than manufacturing sector. The ratio of fixed capital to gross output and net value added to gross output is also high in the other sector.
