SERIES

FOR THE YEAR
ENDING 1917
AND
FOR THE YEAR
ENDING 1918

1918

P R E F A C E

Annual Agricultural Statistics in Kerala are collected and published under the Centrally sponsored Scheme of Establishment of an Agency for Reporting Agricultural Statistics (EARAS). The Original Scheme was designed by adopting taluk as a stratum and the survey was done by complete enumeration of 20% of the revenue villages selected in each year so that the whole state was covered during a period of 5 years. But this design has been changed to suit the estimation of various parameters at Block level through cluster sampling due to the increase in demand at Block level.

Under the present-scheme the whole state is divided into 811 Investigator zones. Blocks/Municipalities with an area of 10 sq.kms. and above are treated as separate stratum. Municipalities with an area of less than 10 sq.kms. were merged with the adjoining blocks and treated as a single stratum. The Blocks are divided into a number of investigator zones depending on the area of the block, nature of land etc. Each Corporation area is divided into 3 Investigator zones. Each Municipality with area more than 10 sq.kms. is treated as a single Investigator zone.

Sample size:-In each Investigator zone 100 culsters of five survey sub-divisions as in the Basic Tax Register will be selected for the survey. These 100 clusters will be allocated among the dry land and wet land proportion to the area under these categories in the zone.

It may be noted that the gross area concept is followed for recording the area under crops. According to this concept the area under various crops in one acre of land can be more than one acre according to the intensity of crops. The following example will make this clear. Let the crops in a particular survey number having a net area of 50 cents be as follows:-

- | | | | |
|----|-----------|---|-----------|
| 1. | Banana | - | 400 nos. |
| 2. | Pineapple | - | 1000 nos. |
| 3. | Tubers | - | 10 cents |
| 4. | Tapioca | - | 5 cents |

Converting the crops given in number into area, adopting the standard number of plants/trees/per acre, the area under banana will be 50 cents (800/per acre) and Pineapple 20 cents (5000/per acre). So the gross cropped area will be -85 cents (50 + 20 + 10 + 5).

As mentioned above the new design was introduced to prepare agricultural statistics at Block Level. But from experience it is found that there is significant year to year variations in the Block wise estimates. This may be due to small sample size and also due to multiplicity of crops and inter-crops in the sample units. Hence, if the crops are not evenly distributed in the block it is possible that there is considerable year to year variations in the estimated area of different crops even if there is no change in the cropping pattern. For eg. if a predominant crop cultivated in a block is sparsely cultivated in the selected clusters, the estimated area of the crop in the block is likely to be an under estimate. On the other hand if a minor crop in the block is found cultivated in most of the selected clusters, the estimated area under the crop will be an over estimate. In order to reduce the above bias arising out of the small sample size and uneven distribution of various crops in a block, three year moving average of area and production of 10 important crops are presented in this publication.

It may also be remembered that only the area and production of crops cultivated in land brought under the Revenue Department is covered in this publication. The area and production of crops grown in reserved or encroached forest area are not included in this publication.

This publication is prepared in the Agricultural Statistics Division of the Department by Sri. Rajendran, Research Assistant and Sri. B. Rajagopal, U.D.Compiler under the close supervision of Sri. R. Mohandas, Joint Director.

I hope the report will be of considerable use to planners both in government and outside and also researchers and other data users interested in Block Level Planning. Opinion and suggestions for improvement are welcome.
