STUDY ON THE
TREND IN TALUK YIELD RATE OF PADDY

DESIGN SURVEYS & STUDIES DIVISION
DEPARTMENT OF ECONOMICS & STATISTICS
1984.

P R E F A C E.

The Design, Surveys and Studies Division of the Department conducted an analytical study of the yield rates of paddy in the different taluks of the State over the period from 1972-1981. The findings of the study are given in this report. One of the important findings of the study is that the number of experiments are to be increased in taluks where the standard error is found to be very high. The analysis was done by Sri N.V. George, Joint Director of the Design, Surveys and Studies Division.

Department of Economics and
Statistics, Trivandrum,

Dated / --9-- 1984.

DIRECTOR.

A STUDY ON THE TREND IN TALUK WISE YIELD
A STUDY ON THE TREND IN TALUK WISE YIELD RATES
RATES OF PADDY.

Introduction:

Crop Cutting Surveys in Paddy are conducted regularly by the Department of Economics and Statistics for the three crop seasons viz. Autumn, Winter and Summer. The yield estimates are prepared on the basis of the results of these Surveys. The production of dry paddy at the taluk, district and State levels are estimated for each season.

In this paper a study of the trend in yield rates of paddy at taluk level is attempted.

1. Sampling design.

A stratified multistage random sampling design is adopted for the crop cutting survey. Taluk is treated as the stratum, revenue village as the first stage unit, a survey sub-division number as the second stage unit, a Kandom as the third stage unit and a square plot of side 5 metres as the ultimate sample unit. From 1975-76 onwards crop cutting survey is conducted in the villages selected for area estimation surveys. Upto 1975-76, Karas/Census villages were the first stage units which were selected specifically for this purpose.

2. Procedure of estimation of mean yield.

The simple average of the yield in various selected plots of a taluk is taken as the taluk mean yield. The yield rate of dry paddy per hectare is worked out by multiplying the taluk mean yield per plot by 400 and the dringe factor. For finding out the dringe factor, dringe experiments are conducted on 3 samples of harvested produce in a taluk.

3. Variation in mean yield.

The average yield estimated as given in the previous paragraph is available taluk-wise and season-wise. In this paper, the data for the period 1972-81 have been used. In Table 1 in the appendix, the state average yield rates are given. From this table, it can be seen that there is an increase in yield rate during Autumn season. In the case of Winter season there was increase only during 1973, from 1974 onwards a declining trend is noticed. In the case of summer season, the yield rates show considerable decline trend compared to 1972. But the summer yield rates are higher compared to the other two seasons in all the years.

The taluks can be classified into two, based on the average yield rate. The first category of taluks consists of those having yield rates higher than the state average yield in most of the years 1972-81. The second category of taluks have yield rates lower than the state average yield. The names of taluks coming in the first category during each season is given below:-

Contd.....

<u>Autumn</u>	<u>Winter</u>	<u>Summer</u>
1. Neyyattinkara	1. Kottarakkara	1. Kurumangapally
2. Trivandrum	2. Kunnathur	2. Mevelikkara
3. Pathanepuram	3. Pathanepuram	3. Chengannur
4. Pathanamthitta	4. Pathanamthitta	4. Thiruvalla
5. Chengannur	5. Chengannur	5. Kuttanad
6. Kuttanad	6. Thiruvalla	6. Changannacherry
7. Changannacherry	7. Kuttanad	7. Kottayam
8. Kanjireppally	8. Changannacherry	8. Thalappilly
9. Kottayam	9. Kottayam	9. Palghat
10. Meenachil	10. Meenachil	
11. Devicolam	11. Peermade	
12. Udumbanchola	12. Devicolam	
13. Thodupuzha	13. Udumbanchola	
14. Kothamangalam	14. Thodupuzha	
15. Muvattupuzha	15. Chittur	
16. Chittur	16. Alathur	
17. Alathur	17. Palghat	
18. Palghat	18. South Wynad	
19. Perinthelmann		

From the above, it can be seen that only the five taluks of Chengannur, Kuttanad, Changannacherry, Kottayam and Palghat have yield rates higher than the state average during all the three seasons.

The taluk-wise yield rates during the period 1972-81 are given in Tables 2 to 4 for the seasons Autumn, Winter and Summer seasons separately. The figures given in the tables show that the following taluks had yield rates higher than the state yield rates during the years noted against them.

No. of years in which taluk yield rate is higher than state yield rate.

Taluk.	Autumn	Winter	Summer
1	2	3	4
1. Neyyattinkara	9	3	Nil
2. Trivandrum	8	3	"
3. Nedumangad	Nil	3	"
4. Chirayinkil	3	8	"

26. Thodupuzha	6	5	Nil
27. Kothamangalam	5	3	Nil
28. Muvattupuzha	6	5	Nil
29. Cochin	3	Nil	Nil
30. Kanayannur	Nil	Nil	1
31. Kunnamkulam	5	1	Nil
32. Alwaye	4	2	Nil
33. Parur	2	1	Nil
34. Crangannore	Nil	Nil	1
35. Mukundapuram	"	1	1
36. Trichur	"	1	1
37. Thalappilly	"	2	6
38. Chavakkad	"	1	4
39. Chittur	9	10	4
40. Alsthor	9	10	8
41. Palghat	9	10	2
42. Ottappalamerry	Nil	4	2
43. Mannarghattil	4	3	Nil
44. Perinthalmanna	3	1	2
45. Ponnani	3	3	6
46. Tirur	2	2	6
47. Ernad	Nil	Nil	Nil
48. Kozhikode	"	"	3
49. Quilandy	"	"	1
50. Badagara	"	"	2
51. South Wynad	"	7	Nil
52. North Wynad	1	4	2
53. Tellicherry	Nil	Nil	"
54. Cannanore	1	"	"
55. Taliparamba	2	1	3
56. Hosdurg	2	1	1
57. Kasargode	4	2	1
58. Guruvayur	"	"	"

It is noticed from the above that generally taluks in Trichur, Kozhikode and Cannanore districts have lower yield rates during the Autumn and Winter seasons. During the summer season, taluks in Trivandrum, Quilon, Kottayam, Idukky, Ernakulam and Cannanore districts have lower yield rates. Ernad and Tellicherry taluks have yield rates lower than state average yield rates in all these years in the three seasons. Nedumangad, Shertallai, Kanayannur, Crangannore, Kozhikode, Quilandy, Badagara, South Wynad, Cannanore and Taliparamba taluks have comparatively low yield rates during two out of the three seasons.

Contd.....

Index of Variation

4.

The changes in State yield rates compared to the 1972 yield rates are given as index of variation in Table 1. The yield rates of Autumn season has increased by 14% in 1980 compared to 1972 yield rates. In the years 1973 to 1979, the increase was not uniform. There was fall in yield during 1974 and 1976.

The winter yield rates remained more or less steady around the 1972 rate with a decline of 15% during 1974. In 1981 the yield rate was 99% of the yield rate in 1972.

In the summer season, the yield rates showed considerable decline during the period 1973-81. The yield rate of 1981 was only 83% of the 1972 yield rate.

The taluk-wise indices for the 3 seasons are given in tables 5 to 7. The names of taluks which have shown 14 or more percent increase in 1980 over 1972 rate during autumn season are given below:-

- | | |
|-------------------|-----------------|
| 1. Nedungand | 12. Vaikom |
| 2. Quilon | 13. Thalappilly |
| 3. Kottarakkara | 14. Chavakkad |
| 4. Kunnathur | 15. Chittur |
| 5. Pathanapuram | 16. Palghat |
| 6. Pathanamthitta | 17. Ottappalam |
| 7. Karthigappally | 18. Mannerghat |
| 8. Mavelikkara | 19. Kozhikode |
| 9. Kuttanad | 20. Tellicherry |
| 10. Kanjirappally | 21. Hosdurg |
| 12. Kottayam | 22. Kasargod |

The following taluks have yield rates not less than the 1972 level during winter season.

- | | |
|-------------------|--------------------|
| 1. Quilon | 16. Thodupuzha |
| 2. Kottarakkara | 17. Muvattupuzha |
| 3. Kunnathur | 18. Kunnathunad |
| 4. Pathanapuram | 19. Alwaye |
| 5. Karunagappally | 20. Chittur |
| 6. Karthigappally | 21. Mannerghat |
| 7. Mavelikkara | 22. Perinthalmanna |
| 8. Thiruvalla | 23. Tirur |
| 9. Shertallai | 24. Ernad |
| 10. Kanjirappally | 25. Kozhikode |
| 11. Kottayam | 26. North Wynad |
| 12. Vaikom | 27. Tellicherry |
| 13. Peermade | 28. Cannanore |
| 14. Devicolam | 29. Thaliparamba |
| 15. Udumbanchola | 30. Hosdurg. |

During the summer season, the following taluks have yield rates not less than the 1972 yield rates.

Contd.....

1. Kotterakkara
2. Pathanapuram
3. Karthigappally
4. Mavelikkara
5. Chengannur
6. Thiruvalla
7. Kunnathunad
8. Parur
9. Crangannore
10. Mukundapuram
11. Trichur
12. Chevakkad
13. Mannarghat
14. North Wynad
15. Cannanore
16. Kasargode

The taluks included in all the 3 lists given above are the following:-

1. Kotterakkara
2. Pathanapuram
3. Karthigappally
4. Mavelikkara
5. Mannarghat

5. Ranking of taluks according to yield rate.

The rank of taluks in descending order of latest yield rates (1981) are given in Table 8 separately for each season. The taluks which hold the highest 5 ranks in yield rates in the 3 seasons are given below:-

<u>Autumn</u>	<u>Winter</u>	<u>Summer</u>
Kuttanad	Kottayam	Mavelikkara
Kenjirappally	Perrumada	Chengannore
Chittur	Devicalem	Kuttanad
Alathur	Udumbanchola	Changanacherry
Palghat	Palghat	Palghat

Palghat taluk has the distinction of having high yield rates during all the 3 seasons. Kuttanad taluk has also high yield rates during the three seasons having rank less than 5 in Autumn and Summer seasons and rank 6 for winter season.

The taluks having very poor yield rates are the following:-

<u>Autumn</u>	<u>Winter</u>	<u>Summer</u>
Ambalapuzha	Ambalapuzha	Pathanapuram
Sherthallai	Sherthallai	Pathanamthitta
Crangannore	Crangannore	Karunagappally
Kozhikode	Kozhikode	Nedumangad
Quilon	Quilon	Chirayinkil
Badagara	Badagara	Noyyattinkara
South Wynad		Kunnathur

The taluks for the Autumn and Winter seasons are more or less common in the above list. For the summer season, the low yielding taluks are from Trivandrum and Quilon Districts.

Further study on the reasons for the low yield rates and methods to improve the situation are necessary.

6. Standard error of mean yield

The standard error is a measure of the precision of the estimate. The average percentage standard error of the mean yield for each taluk for the three seasons are given in table 9. The lower standard error the more precise will be the estimates. For getting estimates with greater precision it is necessary to increase the sample size. The distribution of taluks according to range of average percentage standard error is given below:-

Range of variation	No. of taluks.		
	Autumn	Winter	Summer
Below 5
5- 9	15	27	3
10-14	25	21	18
15-19	10	6	18
20 and above	3	2	11
Not recorded	4	1	7
Total	57	57	57

The standard error is less than 15 percent in the case of 40 taluks in Autumn season, 48 taluks in winter season and 21 taluks in summer season.

It is necessary to conduct more experiments in taluks where the percentage standard error is high to get more precise estimates.

7. Summary and Conclusion.

The state average yield rates of paddy has shown very little change during the years 1972-81. Only in the case of autumn season a slight increase in yield rate is noticed during the period. The yield rates have declined from 1972 level for winter and summer seasons.

Among the taluks there is considerable variation in yield rates. Some taluks in Kozhikode and Cannanore districts have yield rates less than the state yield rates for all the years studied.

The yield rates in 5 taluks have shown increasing trend in all the three seasons during 1972-81.

Palghat and Kuttanad taluks have the distinction of having high ranks in yield rates.

In a few taluks the percentage standard error is higher than 20 percent. In taluks where the percentage standard error is high, it is necessary to conduct a larger number of experiments to get more precise estimates.

....
