

18th ROUND

BUREAU OF ECONOMICS & STATISTICS
KERALA STATE

NATIONAL SAMPLE SURVEYREPORT NO.11

Report on the consumer expenditure in Kerala
(Based on 18th round of N.S.S.) February 1963
to January 1964.

TRIVANDRUM

1968

1. N.S.S. Report No.1
(1963) Report on employment and unemployment in urban areas based on the data collected in the 14th round of N.S.S. (July 1958 to June 1959).
2. N.S.S. Report No.2
(1963) Report on fertility and mortality rates in rural areas in Kerala State based on the 14th round data (July 1958 to June 1959).
3. N.S.S. Report No.3
(1964) Vital rates in rural areas based on the 15th round data (July 1959 to June 1960).
4. N.S.S. Report No.4
(1965) Unemployment and labour force participation in urban areas based on the 16th round data (July 1960 to June 1961).
5. N.S.S. Report No.5
(1965) Report on employment and unemployment in rural areas based on the data collected in the 14th round of N.S.S. (July 1958 to June 1959).
6. N.S.S. Report No.6
(1966) Report on the survey to estimate the area under improved agricultural practices in C.D. areas - Kharif-1963-64.
7. N.S.S. Report No.7
(1967) Report on the consumer expenditure in Kerala based on the 14th, 15th and 16th round of N.S.S.
8. N.S.S. Report No.8
(1968) Report on the consumer expenditure in Kerala based on the 17th round of N.S.S. (September 1961 to July 1962).
9. N.S.S. Report No.9
(1968) Report on the survey to estimate the area under improved agricultural practices in C.D. areas - Rabi - 1963-64.
10. N.S.S. Report No.10
(1968) Report on the operational holdings in Kerala (Rural) based on the 16th round of N.S.S. (July 1960 to June 61).

Report on consumer expenditure in Kerala (based on
the 18th round of N.S.S.- February 1963 to January 1964)

1. Introduction:

This report presents the results of the analysis of data on consumer expenditure relating to Kerala State collected during the 18th round of the National Sample Survey (1963-64). The 17th round of the National Sample Survey was completed by August 1962. No survey on consumer expenditure was conducted during the period September 1962 to January 1963 for the sub-sample. The 18th round of N.S.S. commenced on February 1963 and was completed in January 1964. The results given in this report therefore relate to the period of 12 months from February 1963 to January 1964. The results are based on the data collected from the State samples only.

II. Coverage, period and sampling design of the Survey:

2.1 The survey covered both the rural and urban areas of the State. The concept of rural and urban areas was the same as that of the 1951 population Census. The period of the survey was, as stated earlier, twelve months from February 1963 to January 1964.

2.2. Sampling design (Rural):

The sampling design for the rural sector was a stratified two-stage one, the villages being the first stage units and households the second stage units. The state was first divided into two agricultural regions by grouping contiguous districts having similar crop pattern and population density. The northern region consisted of the districts of Palghat, Kozhikode and Cannanore and the southern region consisted of the remaining Districts of the State. Within a region contiguous tehsils homogenous with respect to population density were grouped to form strata such that the sum of the sizes of the villages in each stratum was exactly equal, the size being the 1951/1961 census population of the village rounded off to the next higher multiple of 1000. The State was divided into 15 strata during the 18th round of National Sample Survey.

The 1951 census list of villages was used as the sampling frame. In each stratum 4 independent interpenetrating sub-samples of 6 villages each were selected circular systematically with independent random starts after arranging the tehsils in the order of their geographical nearness. The number of villages surveyed was 360 in the State sector. The allocation and selection of samples were done by the Indian Statistical Institute, Calcutta. If any of the sample villages was very large, it was divided into a specified number of hamlet groups of equal population and the survey was done in one hamlet group selected at random. The sampling design was self-weighting for each sub-sample at the State level.

2.3. Sampling design (Urban):

The sampling design for the urban sector too was a stratified two-stage one with urban blocks as the first stage units and households as the second stage units. The urban stratification was done by dividing the State into two sectors, namely, Sector I consisting of State capital and the towns and cities with 1951 census population 50000 and above; and Sector II consisting of the remaining urban area. These two sectors formed the two urban strata for the State.

While allocating the sample size of urban blocks to these strata, sector I stratum was given twice the weightage. In each sector four interpenetrating sub-samples of urban blocks were selected circular systematically with independent random starts. In sector I the sample blocks had been selected systematically from the list of Blocks prepared by the National Sample Survey in the urban frame survey (UFS) with probability proportioned to the Block population rounded off to the next multiple of 1000. In sector II, the sample blocks had been selected circular systematically with equal probability either from the U.F.S. Blocks or 1961 census Blocks, in that order of priority depending as the type of frame available in a town, after arranging the towns according to their means of livelihood pattern as per the 1951 census data. The allocation and selection of the urban Blocks were done by the Indian Statistical Institute, Calcutta. In the State 144 Blocks were surveyed during the period.

In the case of big blocks, each Block was divided into a specified number of sub-blocks of roughly equal population and the survey was conducted in one sub-block selected at random. The sampling design was self-weighting for each sub-sample at the sector-level.

2.4. Programme of work (Rural):

In each stratum the samples were drawn in the form of 4 independent interpenetrating sub-samples of six villages each. Sub-samples 1 and 3 were surveyed by one party of Investigators and sub-samples 2 and 4 by another party of Investigators. The survey period one year was divided into 6 sub-rounds of two months each. During each sub-round an Investigator would survey two villages, one from each of the sub-samples 1 and 3 (or 2 & 4) allotted to him.

The households in the selected village (or hamlet in the village) were first listed and they were serially arranged in the following six classes based on the major source of income and the household size.

1. Households with major source of income from agricultural labour and household size 1 to 4.
2. Households with major source of income from agricultural labour and household size 5 and above.
3. Households with major source of income from other agricultural means of livelihood and household size 5 and above.

4. Households with major source of income from other agricultural means of livelihood and household size 1 to 4.
5. Households with major source of income from non-agricultural means of livelihood and household size 1 to 4.
6. Households with major source of income from non-agricultural means of livelihood and household size 5 and above.

From this frame a linear systematic sample of households were selected using the random start and interval specified for the village. From this sample of households a sub-sample of households was selected linear systematically using the specified random start and a sampling interval of 10. The design was self weighting. It was expected to collect data on consumer expenditure from 3 households per village on an average.

2.5. Programme of work (Urban):

The period of survey was one year divided into 6 sub-rounds of 2 months each.

The households within a selected block (or sub-block) were listed and finally arranged in the following five classes.

1. Households with atleast one unemployed person.
2. Households with professions and liberal arts as major source of income and household size 1 to 3.
3. Households with professions and liberal arts as major source of income and household size 4 and above.
4. Other households with household size 4 and above.
5. Other households with household size 1 to 3.

Using this list as the sampling frame a linear systematic sample of households was selected using the specified random start and interval. From this sample a sub-sample of households was selected for collection of data on consumer expenditure using the given random start and a sampling interval of 30. It was expected to cover on an average one household per block for the enquiry on household consumer expenditure. The design was self-weighting.

2.6. Schedule of enquiry:

The schedule 1.0 meant for the collection of detailed information on the expenditure incurred by the sample household on domestic consumption consisted of the following topics.

Block 1. Identification of sample household.

" 2. Information on some household characteristics of the sample household.

Block 3. Particulars of Investigation.

- " 9. Household members and their particulars (Block No. maintained uniform with earlier rounds).
- " 10. Exchange and consumption of cereals during the month ended on
- " 11. Exchange and consumption of milk and milk products during the month ended on
- " 12. Exchange and consumption of other food items during the month ended on
- " 13. Exchange and consumption of intoxicants, fuel and light during the month ended on
- " 14. Exchange and use of clothings etc. during the month ended on
- " 15. Expenditure (cash and kind) on miscellaneous goods and services during the month ended on
- " 16. Expenditure on durable and semidurable goods for domestic use during the month ended on
- " 17. Summary of expenditure by selected items
- " 18. Housing condition
- " 19. Remarks by Investigator
- " 20. Comments by Inspector.

A copy of the schedule is appended to the report. It may be noted that data on expenditure by the household on domestic consumption were collected for a period of 30 days preceding the date of enquiry in the household.

III. Concepts and definitions:

3.0. The basic concepts and definitions followed in the enquiry are explained below:

3.1. Household:

A group of persons normally living together and dinarily taking food from the same kitchen constitute a household. A boarding house, a hotel or a hostel is treated as a cluster of households where each individual boarder (with his dependents or guests) forms a separate household. The households maintained and fed directly by Government such as hospitals, jails, nursing homes, relief camps etc. are however excluded from the scope of the survey. But the residential staff of these institutions will be considered to form households.

3.2. Household member:

Any person who takes principal meals with the household for atleast 16 days during a period of 30 days preceding the date of enquiry is considered to be a member of the household. Such a person may be head of the household or a relation or protege of the head or an employee or a guest of the household.

3.3. Household size:

The number of members in a household gives the household size. Those who satisfy the condition of 16 days stay in the household within the reference period are included in the household size.

3.4. Consumer expenditure:

Consumer expenditure comprises all expenditures incurred by the household during the reference period (30 days preceding the date of survey) exclusively on domestic account including consumption out of home grown produce or transfer receipts like gift, loan etc. The expenditure on household enterprises is excluded from consumer expenditure. Consumption out of home grown produce is evaluated at ex-farm rates. Consumption out of gifts and charities as well as of articles acquired through barter exchanges is evaluated at prevailing retail rates. While consumption out of transfer receipts is included, transfer payments of all kinds (loan, gifts, charities, monetary as well as in kind like grain loan etc.) are excluded. Expenditure on purchase and construction of residential houses are considered as expenditure on capital account and hence it is excluded from the consumer expenditure of the household. But the expenses towards maintenance of residential building are included in the consumer expenditure of the household.

Per person consumption is arrived at by dividing the total quantity (or its value) consumed by the total population.

Data on consumer expenditure is collected on the basis of the quantity consumed in respect of cereals, milk, milk products, other food items, intoxicants, fuel and light and clothings. Quantities consumed have been evaluated at the appropriate prices to arrive at the monetary value of consumption. But in respect of other items namely consumption of miscellaneous goods and services, and of durable and semi-durable goods for domestic use, information on the expenditure incurred during the reference period on the items has been collected. This expenditure is taken to represent the consumer expenditure on the articles during the period.

3.5. Services:-

Services cover all types of services in exchange of which goods are received by the household. As money does not play any part here the value of goods received in exchange of 'goods and services' are imputed at the rate of average local retail prices prevailing during the period of reference.

3.6. Reference period:

The period of reference for the enquiry ie. the period for which consumer data are collected from the households surveyed, is 30 days preceding the date of enquiry in the households.

3.7. Items of consumption:

Items of consumption and the major groups into which these items are merged for the purpose of analysing the data and presentation of the results are shown below:

- (i) Cereals: Rice, wheat, jowar, bajra, maize, barley, small millets, ragi, bengal gram and their products.
- (ii) Cereals and cereal substitutes: like tapioca, pea etc.
- (iii) Pulses and products: tur, pea, moong etc.
- (iv) Milk and milk products: liquid milk (cow, buffaloe, goat and others), milk (condensed, powder etc.) ghee(cow and buffaloe), butter etc.
- (v) Other food items: Oil, oil seeds and products, vegetables, fruits and nuts, meat, fish and eggs, sugar, salt, spices, beverages, refreshments and processed food, pickles, jams and jellies etc. Edible oil used as hair oil is excluded.
- (vi) Clothing: All items of clothing - cotton (mill-made, handloom and khaddar), silk, rayon etc. and woolen including items of bedding and upholstery.

Expenditure on the item which were brought into use for the first time during the reference period alone would be considered as domestic consumption.

(vii) Fuel and light:

Coke, coal, firewood, electricity, gas, dung cake, charcoal, kerosene, candle, matches and other fuel and lighting oil.

- (viii) Consumer rent: It consists of rent for residential house, residential land garage for private vehicles and rent for other consumer goods like furniture, electric fans utensiles etc. hired for domestic use and hire charges for decorations on ceremonial occasions.

Rent for owned houses used for residential purposes is not included.

- (ix) Consumer taxes: This item consists of licence fees for keeping gun, radio, cycle, motor car etc. and other consumer taxes like municipal taxes, road taxes etc.

Income tax is not included in this item.

(x) Other non-food items:

Pan etc. tobacco and products, drugs and intoxicants, amusement and sports education, medicine, toilets, sundry goods, consumer services, conveyance ceremonials, furniture, musical instruments, ornaments, domestic utensils, footwear and other durable and semi-durable goods and their repairing expenses including the maintenance of residential houses.

3.8. The expenditure levels in the households have been grouped into 13 classes on the basis of the per capita monthly expenditure in the households and the results of the survey are presented for these classes. The 13 expenditure classes in Rs. arranged in ascending order of magnitude are given below:

Sl.No.	Monthly expenditure classes (in Rs.)
1	0-8
2	8-11
3	11-13
4	13-15
5	15-18
6	18-21
7	21-24
8	24-28
9	28-34
10	34-43
11	43-55
12	55-75
13	75 and above

The groups 0-8, 8-11 etc. stand for 0-less than 8, 8-less than 11 and so on. These 13 classes of expenditure are condensed further into three broad groups of Rs.0-15, Rs.15-24 and Rs.24 and above for the presentation of summary tables included in the text of the report.

IV. Summary of results:

4.0. Coverage of the sample:

The survey was conducted in 360 rural villages and 144 urban blocks. The number of sample households conducted was 1003 in the rural sector and 102 in the urban sector.

4.1. Distribution of population in the rural and urban areas:

From the data collected in the 18th round, it is seen that about 88% of the population live in the rural areas and the remaining 12% in the urban areas of the State. The corresponding percentages during the 17th round of N.S.S. were 85% and 15% respectively.

4.2. Average number of persons per household:

The survey results reveals that the average number of persons per household is 5.78. The household size is 5.81 in

the rural sector and 5.56 in the urban sector. The household size is comparatively larger in the lower expenditure classes. Distribution of average household size by monthly per capita expenditure classes is presented below for the three expenditure classes Rs.0-15, Rs.15-24 and Rs.24 and above.

Table: 1 - Average number of persons per household by monthly per capita expenditure classes.

.....

Monthly per capita expenditure classes in Rs.	Average number of persons per household		
	Rural	Urban	State
1	2	3	4
0-15	6.56	6.72	6.58
15-24	5.66	5.46	5.63
24 & above	4.97	4.80	4.94
All classes	5.81	5.56	5.78

4.3. Distribution of estimated number of households by monthly per capita expenditure classes:

The percentage distribution of the estimated number of households by the three broad monthly per capita expenditure classes is presented in the subjoined table. Monthly per capita expenditure of 72% of the households in the state is below Rs.24/- . Nearly 39% of the households in the urban area belong to the monthly per capita expenditure class of Rs.24 and above. The corresponding percentage of households in the rural area is only about 26.

Table: 2. Percentage distribution of estimated number of households by monthly per capita expenditure classes.

.....

Monthly per capita expenditure classes in Rs.	Percentage number of households		
	Rural	Urban	Rural and Urban
1	2	3	4
0-15	36.52	27.63	35.41
15-24	37.28	33.63	36.83
24 and above	26.20	38.74	27.76
All classes	100.00	100.00	100.00

Percentage distribution of households by detailed expenditure classes is presented in Table III Appendix by classes.

4.4. Percentage distribution of households by monthly per capita expenditure classes for the five years from 1958-59 to 1961-62 and 1962-64 is given below:

Table: 3. Percentage distribution of households in monthly per capita expenditure classes over five years from 1958-59 to 1961-62 and 1963-64.

Monthly per capita expenditure class	Percentage of households in				
	1958-59 (14th round N.S.S.)	1959-60 (15th round N.S.S.)	1960-61 (16th round N.S.S.)	1961-62 (17th round N.S.S.)	1963-64 (18th round N.S.S.)
1	2	3	4	5	6
0-15	55.16	49.47	45.01	34.27	35.41
15-24	25.51	29.46	28.00	40.70	36.83
24 and above	19.33	21.07	26.99	25.03	27.76
All classes	100.00	100.00	100.00	100.00	100.00

It may be noted that the percentage of households increases in the higher expenditure classes over the year under consideration. The percentage distribution of households by detailed expenditure classes for the above periods is given in table 4 in the appendix.

4.5. Distribution of estimated number of persons according to monthly per capita expenditure classes:

Percentage distribution of estimated number of persons by broad monthly per capita expenditure classes is shown in the table (4) below. Percentage distribution of the estimated number of persons by detailed expenditure classes is given in table 5 appended.

Table: 4. Percentage distribution of estimated number of persons by broad expenditure classes.

Monthly per capita expenditure classes in Rs.	Percentage of estimated No. of persons		
	Rural	Urban	Rural & Urban
1	2	3	4
0-15	41.26	33.42	40.32
15-24	36.41	33.10	35.94
24 and above	22.43	33.48	23.74
All classes	100.00	100.00	100.00

The table shows that 40% of the persons in the State spend less than Rs.15 per month for their domestic consumption. More than 76% of persons are spending less than Rs.24 per month per person. Only 24% of the persons remaining spend Rs.24/- and above per persons per month.

4.6. While the percentage of persons is the highest in the expenditure class below Rs.15/- in the rural sector, the percentage of persons in the urban sector is well balanced amongst the three expenditure classes.

4.7. Monthly consumer expenditure per person:

The average per capita total consumer expenditure for a period of 30 days in the state is observed to be Rs.20.40. The corresponding figures for the rural and urban sectors are found to be Rs.19.69 and Rs.25.62 respectively.

4.8. A comparative statement of the average per capita total consumer expenditure for a period of 30 days estimated from the 14th to 18th rounds of N.S.S. are given below:

Table: 5. Monthly consumer expenditure per person during the years 1958-59 to 1961-62 and 1963-64.

Round No.	Year	Per capita consumer expenditure for a period of 30 days (Rs.0.00)		
		Rural	Urban	State
1	2	3	4	5
14	1958-59 (July 58-June 59)	15.50	20.46	16.26
15	1959-60 (July 1959-June 1960)	16.44	22.33	17.31
16	1960-61 (July 1960 - June 1961)	18.21	23.12	18.93
17	1961-62 (September 61-July 1962)	19.10	26.00	20.14
18	1963-64 (February 63-January 64)	19.69	25.62	20.40

An increasing trend is noticed in the monthly per capita total consumer expenditure from year to year in the State per capita consumer expenditure.

4.9. Consumer expenditure per person for a period of 30 days by items of consumption:

The distribution of the monthly per capita expenditure by the various items of consumption is given in the table (6) below:

The result shows that the monthly per capita expenditure under cereals and cereal substitutes is more or less the same in the rural and urban areas. But the per capita expenditure for (i) milk and milk products, (ii) other food items, (iii) clothings, (iv) rent, (v) taxes and (vi) other non-food items is seen to be significantly greater in the urban areas than in the rural parts.

Table: 6. Consumer expenditure in Rs.(0.00) per person for a period of 30 days by items of consumption.

Sl. No.	Item consumed	Per capita consumer expenditure in Rs.(0.00) per persons for 30 days								
		Rural			Urban			State		
		Party I(S1 +S3)	Party II (S2+S4)	Combi- ned (S2+S4)	Party I(S1 +S3)	Party II (S2+S4)	Combi- ned (S2+S4)	Party I(S1 +S3)	Party II (S2+S4)	Combi- ned (S2+S4)
1	2	3	4	5	6	7	8	9	10	11
1.	Cereals	6.23	6.46	6.35	6.69	6.85	6.78	6.29	6.50	6.40
2.	Cereals & cereal substitutes	6.94	7.16	7.05	7.01	7.20	7.11	6.94	7.16	7.06

1	2	3	4	5	6	7	8	9	10	11
3.	Pulses and Products.	0.21	0.23	0.22	0.33	0.41	0.37	0.23	0.26	0.24
4.	Milk & milk products.	0.59	0.64	0.62	0.87	1.77	1.32	0.63	0.77	0.70
5.	Other food items	5.02	5.28	5.16	6.03	7.26	6.66	5.14	5.52	5.34
6.	All food items.	12.76	13.32	13.05	14.24	16.64	15.46	12.94	13.71	13.34
7.	Clothings.	0.79	1.31	1.06	0.99	2.14	1.58	0.81	1.40	1.12
8.	Fuel & light.	1.43	1.42	1.43	1.53	1.79	1.66	1.44	1.46	1.45
9.	Rent.	0.05	0.06	0.05	0.49	0.23	0.36	0.11	0.08	0.09
10.	Taxes.	0.03	0.04	0.03	0.06	1.14	0.60	0.03	0.17	0.10
11.	Other non-food items.	3.21	4.88	4.07	5.08	6.81	5.96	3.43	5.11	4.30
12.	All non-food items.	5.50	7.71	6.64	8.15	12.11	10.16	5.82	8.22	7.06
13.	Total consumer expenditure.	18.26	21.02	19.69	22.39	28.75	25.62	18.76	21.93	20.40

4.10. It is seen from the table that the average consumer expenditure for a person for a month of 30 days in the state is Rs.7.06 on cereals and cereals substitutes, Rs.0.70 on milk and milk products, Rs.1.12 on clothings and Rs.1.45 on fuel and light.

Distribution of monthly per capita expenditure under the different items of consumption by the detailed expenditure classes and for the different sub-samples for the rural areas, urban areas are given in the tables 6 and 7 appended. Table 8 appended gives the monthly per capita consumer expenditure under the different items in the state for the various monthly per capita expenditure classes of the population.

Table 9 appended presents monthly per capita consumer expenditure (Rs. 0.00) separately for the rural and urban areas of the state for the different items of consumption as obtained from the different rounds of the N.S.S. from the 14th round to the 18th round.

4.11. Percentage distribution of the monthly per capita consumer expenditure among the various items of consumption:

The percentage distribution of the total consumer expenditure for a month of 30 days for the various items of consumption is given in table 10 appended. If we arrange the items in the table by grouping them into five major groups namely (i) food, (ii) clothing, (iii) fuel and light, (iv) rent and taxes and (v) miscellaneous, we get the results presented in the following table.

-: 12 :-

Table: 7. Percentage distribution of monthly per capita consumer expenditure among the major groups of consumption.

Sl. No.	Consumption group	Percentage of monthly per capita total consumer expenditure		
		Rural 3	Urban 4	State 5
1.	Food	66.27	60.34	65.38
2.	Clothing	5.37	6.15	5.49
3.	Fuel and light	7.23	6.49	7.12
4.	Rent and taxes	0.44	3.77	0.94
5.	Miscellaneous	20.69	23.25	21.07
Total:		100.00	100.00	100.00

4.12. The above table shows that more than 65% of the total monthly consumer expenditure in the State is spent on food items. When the rural and urban areas are considered separately it is seen that 66% of the total monthly consumer expenditure is spent on food items in the rural areas and 60% in the urban areas. Next to food items, the major item of expenditure is the 'miscellaneous items'. 21% of the total monthly consumer expenditure is spent on this item in the state. The corresponding figures for the rural and urban areas are 21% and 23%. The percentage estimates of the total monthly consumer expenditure spent on clothing, fuel and light, and rent and taxes are 5%, 7% and 1% respectively.

4.13. Per capita consumption of rice and wheat by quantity:

The average quantity of rice and wheat consumed per person for a month of 30 days is shown in table 11 appended. The average quantity of rice consumed per person for a period of 30 days worked out to 9.99 kgms. The corresponding figures for the rural and urban areas are 9.86 kgms. to 10.47 kgms. respectively. The consumption of wheat is very low during the period of the survey. The average quantity of wheat consumed per person for a period of 30 days came to 0.06 kgm. The corresponding figures for the rural and urban areas are 0.02 kgm. and 0.19 kgm. respectively. This shows that wheat consumption is more in the urban areas than in the rural parts as observed in the case of rice.

4.14. Monthly per capita quantity consumption of rice and wheat according to the three major expenditure classes is given in table (8) below:

Contd.....

-: 13 :-

Table: 8. Average quantity of rice and wheat consumed per person for a period of 30 days.

Monthly per capita expenditure classes in Rs.	Quantity of rice and wheat(0.00 kgm.) consumed per person for a period of 30 days						
	Rice			Wheat			
	Rural	Urban	Rural & Urban	Rural	Urban	Rural & Urban	
1.	2	3	4	5	6	7	
0- 15	7.36	8.65	7.59	0.01	0.02	0.01	
15-24	10.70	10.36	10.64	0.02	0.10	0.03	
24 &above	13.12	12.39	12.91	0.06	0.45	0.17	
All classes	9.86	10.47	9.99	0.02	0.09	0.06	

The average quantity of rice and wheat consumer per person for a month of 30 days is given in table 11 appended for the detailed expenditure classes.

4.14. A comparative statement of the quantity of rice consumed per person for a month of 30 days for the period of five years corresponding to the 14th, 15th, 16th, 17th and 18th round of N.S.S. is given below:

Table: 9. Quantity of rice (0.00 kgm.) consumed per person for a period of 30 days.

N.S.S. round and year	Quantity (0.00 Kgs.) rice consumed		
	Rural	Urban	Rural & Urban
	2	3	4
14th round -1958-59(July 58-June 59)	7.79	8.68	7.92
15th round- 1959-60(July 59 - June 60)	8.34	10.59	8.68
16th round- 1960-61(July 60 - June 61)	9.63	9.60	9.63
17th round- 1961-62(Sept. 61 - July 62)	9.28	9.27	9.28
18th round-1963-64 (Feb. 63 - Jan. 64)	9.86	10.47	9.99

4.15. Monthly per capita expenditure for All India and different States:

Comparative figures of per capita consumer expenditure on important items of consumption for All India and for different States are available for the year 1960-61, compiled on the basis of 16th round N.S.S. Central Sample data. The figures are presented in table 10.

TABLE - 10.

"Consumers' expenditure" in rupees (0.00) per person for a period of 30 days by items of consumption in the rural and urban areas for different States and All India.

Consumer expenditure in (Rs. 0.00) per person for a month of 30 days.

Source: National Sample Survey - 16th round - July 1960 - August 1961 - Report No. 101 issued by the Cabinet Secretariat, Government of India.

V. Estimation procedure:

The procedure followed in estimating the total value of the various characteristics presented in the reports are given below:

The estimate of the total of any characteristics (T) from a particular sub-sample in urban area is given by

$$\hat{T} = \sum_s M_s \sum_{k=1}^K \sum_{i=1}^{n_s} \sum_{j=1}^{h_{si}} y_{sij} \quad \text{where}$$

M_s is the constant multiplier for the s^{th} sector.

(ie. M_s . for sector I - 9720 and for sector II - 19440)

For rural areas estimate (\hat{T}) for a particular sub-sample is given by

$$\hat{T} = M \sum_{s=1}^k \sum_{i=1}^L \sum_{j=1}^{h_{si}} y_{sij} \quad \text{where } M \text{ is the constant multiplier supplied (ie. } M = 9360)$$

Notations:

s = subscript for s^{th} stratum/sector

i = subscript for i^{th} sample village/block/selected part of village or block.

j = subscript for j^{th} sample household.

k = number of strata/sectors in the State.

y = value of the characteristic.

h = number of households selected.

n = number of villages/blocks selected.

VI. APPENDIX.

The following tables are appended to the report:-

- (1) Distribution of sample households by monthly per capita expenditure classes.
- (2) Distribution of average number of persons per household by monthly per capita expenditure classes.
- (3) Percentage distribution of the estimated number of households by monthly per capita expenditure classes
- (4) Percentage distribution of estimated number of households for the different rounds.
- (5) Distribution of average household size by monthly per capita expenditure classes for 17th and 18th rounds.
- (6) Percentage distribution of the estimated number of persons by monthly per capita expenditure classes.
- (7) Distribution of consumer expenditure (in Rs.0.00) per person for a period of 30 days by various items of consumption and by monthly per capita expenditure classes.
(Rural)
- (8) Distribution of consumer expenditure (in Rs.0.00) per person for a period of 30 days by various items of consumption and by monthly per capita expenditure classes.
(Urban)
- (9) Distribution of consumer expenditure (in Rs.0.00) per person for a period of 30 days by items of consumption and by monthly per capita expenditure classes.
(Rural & Urban)
- (10) Monthly per capita consumer expenditure(Rs.0.00) on the various items of consumption for different rounds of the N.S.S.
- (11) Percentage distribution of total consumption expenditure among various items of consumption.
- (12) Average quantity in Kgs.(0.00) of rice and wheat consumed per person for a period of 30 days by the monthly per capita expenditure classes.
- (13) Facsimile of the schedule of investigation.
