The correlation between economic activities and residential construction is evident. There is a high positive correlation (0.8) between total number of commercial and industrial buildings in each district with number of residential buildings in that district. Districts with a notable number of commercial and industrial presences report a significant number of residential buildings.

7. Type of ownership

The total ownership count for each district is a combination of private, government/local bodies, and other ownership categories. The private ownership is again bifurcated as male and female ownerships. During 2021-'22, out of 3,95,803 buildings constructed, 3,86,944 buildings are owned by private parties, which is 11.15% more than previous year and 3,017 buildings owned by government/Local Bodies which is 20.96% less than previous year. Majority of buildings (97.76%) are owned by private parties. This year percentage of Govt/Local body ownership is 0.76%.

In general, male ownership exceeds female ownership across all districts, which is a common trend in property ownership statistics. There is notable female ownership, indicating a positive trend in property ownership diversity. Malappuram district leads in private ownership with 53,068 buildings, reflecting a significant contribution from private individuals or entities.

In the case of ownership of private buildings male ownership is more than female ownership. The gender ratio in building ownership remains consistent across rural and urban areas, reflecting a broader pattern of male dominance in property possession, irrespective of the geographical context. On a statewide scale, the ratio between male and female ownership stands at 3:1, portraying a significant gender imbalance in private property possession across Kerala. Malappuram district amplifies this gender imbalance, reporting the highest ratio of 4:1. This trend underscores the need for a nuanced examination of gender dynamics in property ownership.

8. Government/Local bodies owned buildings

Out of 3,95,803 buildings constructed in 2021-'22, only 3,017 buildings are owned by government/local bodies. This is only about 0.76% of the total number of buildings newly built in this year, and which is 20.96% less than previous year, underscoring the government and local bodies exhibit a decline in their ownership share. Thiruvananthapuram district takes the lead in governmental constructions, boasting 558 buildings in the public domain. In contrast, Alappuzha district reports the least government-owned buildings, standing at a modest 80.

9. Type of roofing

Roofing plays a pivotal role in the construction landscape, serving as a protective and defining element of a building. Beyond its fundamental function of shielding occupants from the elements, roofing contributes significantly to a structure's aesthetic appeal. The choice of roofing material reflects a delicate balance between tradition, functionality, and modern design trends. Type of roofing is one of the indicators of standard of living of people, and may be changed according to climatic conditions and technology. The introduction of new materials and technology reasoned drastic change in the roofing pattern of houses. People preferred stronger roofing pattern. As a result, thatched and tiled roofing diminishes slowly.

During 2021-'22, 3,64,613 (92.12%) of buildings were built up with concrete roof. Only 1,890(0.48%) buildings were constructed with thatched roof and 7,817 (1.97%) with tiled roof and 5.43% with other materials.

2020-'21	268050	87824	355874
2021-'22	279465	116338	395803

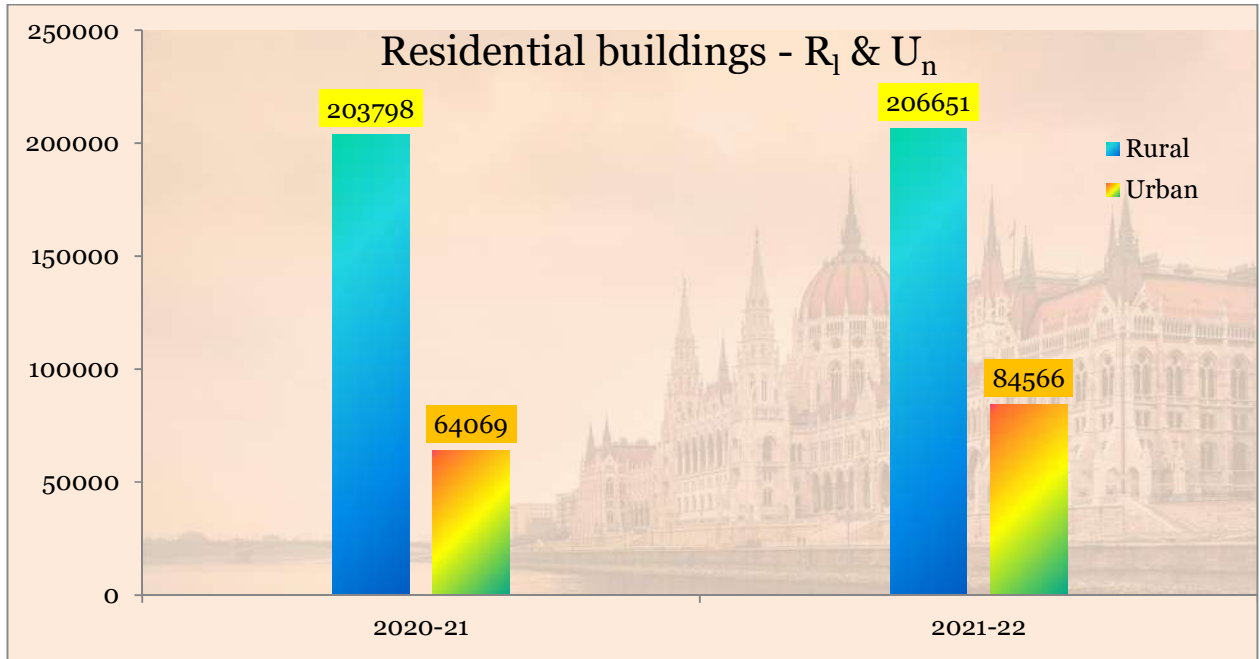

The total number of newly constructed buildings witnessed a notable increase, growing from 3,55,874 in 2020-'21 to 3,95,803 in 2021-'22, indicating a substantial growth of 11.22%. Rural areas experienced a rise in construction activity, with the number of newly built structures increasing from 2,68,050 in 2020-'21 to 2,79,465 in 2021-'22. This reflects a growth rate of approximately 4.26%, suggesting a steady but moderate increase in rural construction. Urban areas demonstrated a more significant

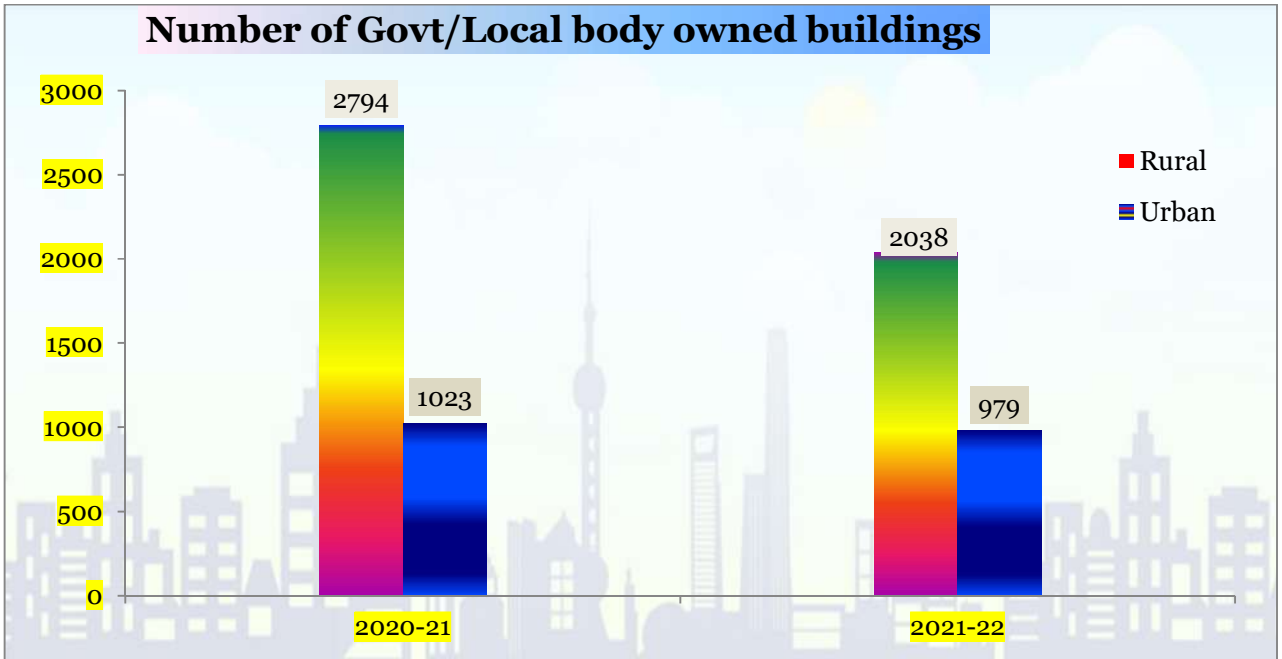

surge in construction, with the number of newly constructed buildings escalating from 87,824 in 2020-'21 to 1,16,338 in 2021-'22. This represents a robust growth rate of 32.47%, signifying accelerated construction activity in urban centers after the covid-19 impact. The faster pace of construction in urban settings may be attributed to factors such as urbanization, infrastructure development, and increased economic activities.

Number of govt. owned buildings in rural area is 2,038 (0.73%) and in urban area it is 979(0.84%) in 2021-'22 which are respectively 756 and 44 less than previous year.

Policymakers can use this data to evaluate the effectiveness of government-driven construction initiatives and adjust policies accordingly. Addressing the decrease in the count of buildings constructed by government/local bodies may require a reassessment of strategies and resource allocation.

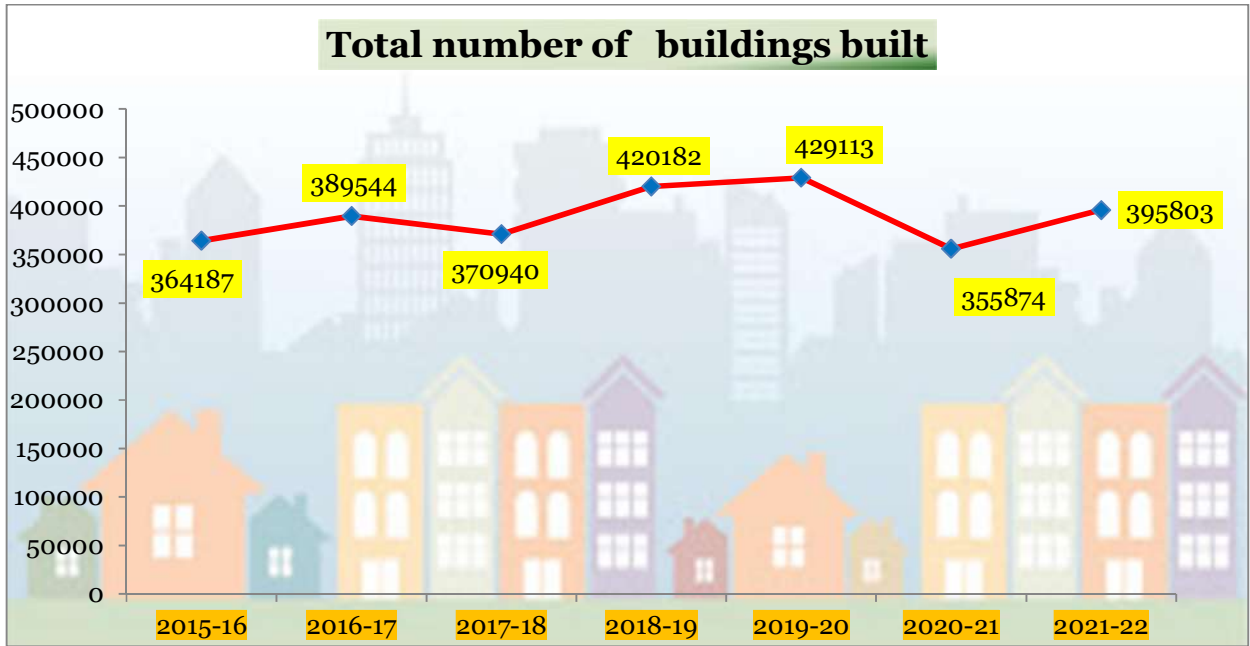

14. Analysis of building statistics since 2015-16

The table below encapsulates a comprehensive overview of building construction activities in the state of Kerala over the financial years from 2015-'16 to 2021-'22. The data provides a meticulous account of the number of newly constructed buildings each year, reflecting the dynamic landscape of urban and rural development. As Kerala continues its journey towards progress and modernization, this analysis aims to shed light on the evolving trends, key milestones, and potential factors influencing the building construction sector during this seven-year period.

Total		2038256	2084674	518476	640969	2725643

From 2015-'16 to 2021-'22, 27,25,643 buildings were completed in Kerala State. Among these 20,84,674 are residential buildings and 6,40,969 are non residential buildings. 97.77% of residential buildings are dwelling houses and 80.89% of non residential buildings are commercial buildings.

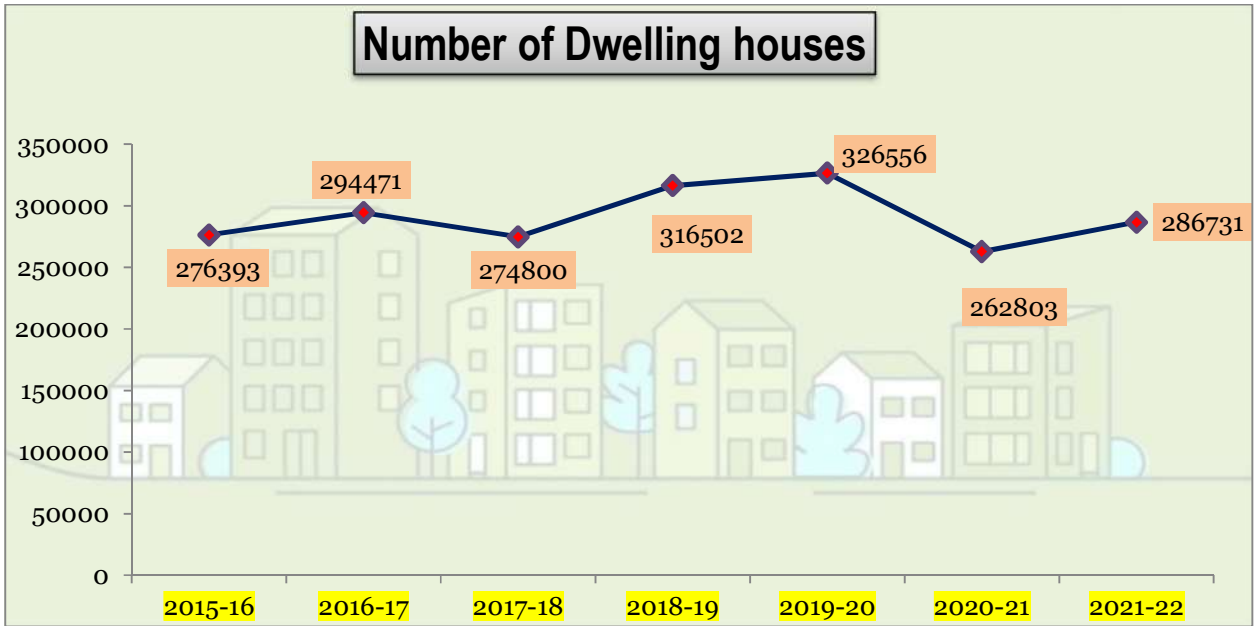

Total numbers of buildings built in each year since 2015-'16 shows an oscillating tendency. Total number of buildings completed in each financial year increases from 2015-'16 to 2016-'17, then it decreases from 2016-'17 to 2017-'18. Then it again increases from 2017-'18 to 2019-'20. This increase in number of buildings built in two years may be due to the impact of "Re-build Kerala" programme implemented by Govt. of Kerala after the flood occurred in the month August 2018. So the reasons for the variations in number of buildings may due to reconstruction activities in post flood situation and govt. sponsored programmes. The total number of new buildings built since 2015-'16 was least in the year 2020-'21. This may be due to the effect of the pandemic Covid-19 which hit Kerala first time on the month of March 2020. Then the lockdown period started and it affected the construction sector badly. Again the number of buildings increases in 2021-'22; it may be due to the financial recovery achieved after the covid pandemic crisis. Total number of newly built buildings in 2021-'22 is 11.22% more than the previous year.

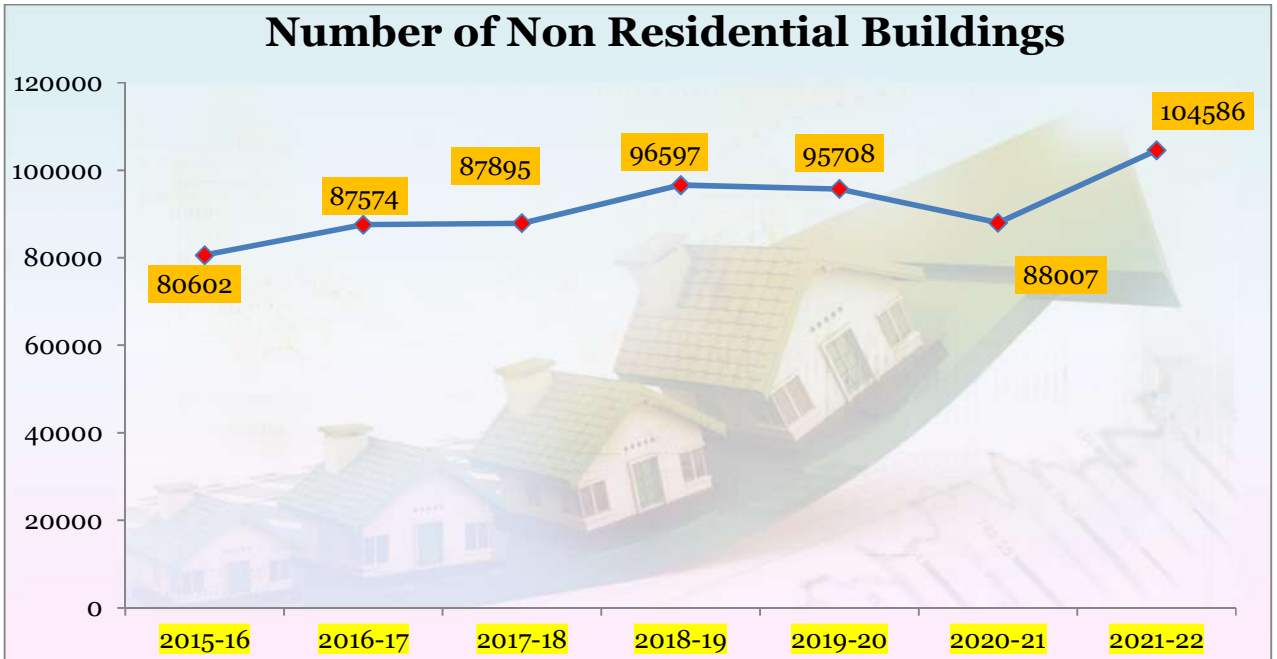

The overall growth trajectory illustrates a general upward trend in residential construction, with occasional fluctuations influenced by external factors. Residential buildings completed in each financial year since 2015-'16, show an increasing tendency except for the financial years 2017-'18 and 2020-'21. The notable surge in residential buildings from 2018 to 2020 is primarily attributed to the impactful "Rebuild Kerala" initiative spearheaded by the Government of Kerala. This strategic response aimed to reconstruct post-flood scenarios, contributing significantly to the increased building activities during this period. However, a conspicuous dip is observed in 2020-'21, aligning with the global pandemic's onset.

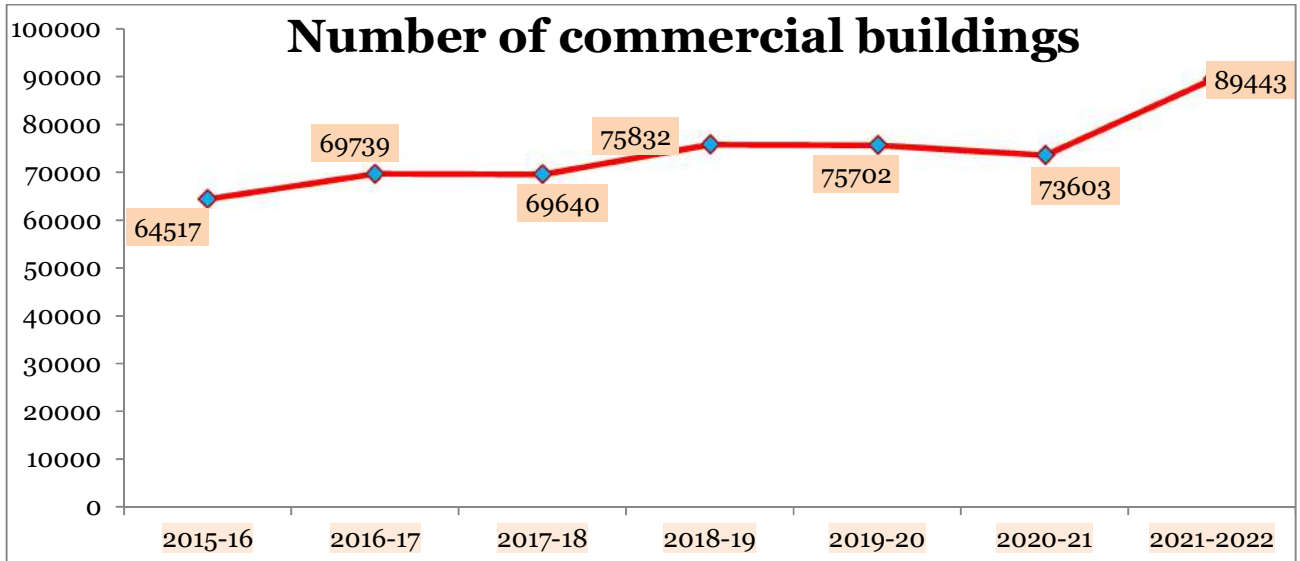

The lockdowns and ensuing financial constraints resulting from the Covid-19 crisis led to a notable reduction in residential constructions during this fiscal year. Interestingly, the subsequent financial year, 2021-'22, witnessed resurgence in residential building completions. The financial constraints induced by the preceding year's challenges appeared to alleviate, fostering an environment conducive to increased construction activities. The percentage increase in residential buildings for this year stands at a notable 8.72.

There have been 20,38,256 dwelling houses constructed over these seven years. This comprehensive figure encapsulates the collective efforts and investments in providing residences for the population. Dwelling houses completed in each financial year since 2015-'16, show an increasing tendency except for the financial year 2017-'18 and 2020-'21. Number of dwelling houses built is least in the year 2020-'21 since 2015-'16. In this year, 2021-'22, the percentage of increase in the number of dwelling houses is 9.10%.

The cumulative impact of seven years of non residential building construction in Kerala is reflected in the total count of 6,40,969 non residential buildings. The data shows an overall increasing trend in the construction of non-residential buildings, with some fluctuations in between. The COVID-19 pandemic had a profound impact on various industries, including construction, and it's highly likely that it played a significant role in the decrease in non-residential building construction in the financial year 2021-'22. The construction of non-residential buildings in Kerala has demonstrated a positive growth trend with a remarkable surge in the financial year 2021-'22. Percentage of increment in the number of non residential buildings is 18.84 with respect to previous year. This suggests a thriving construction industry and possibly a growing economy.

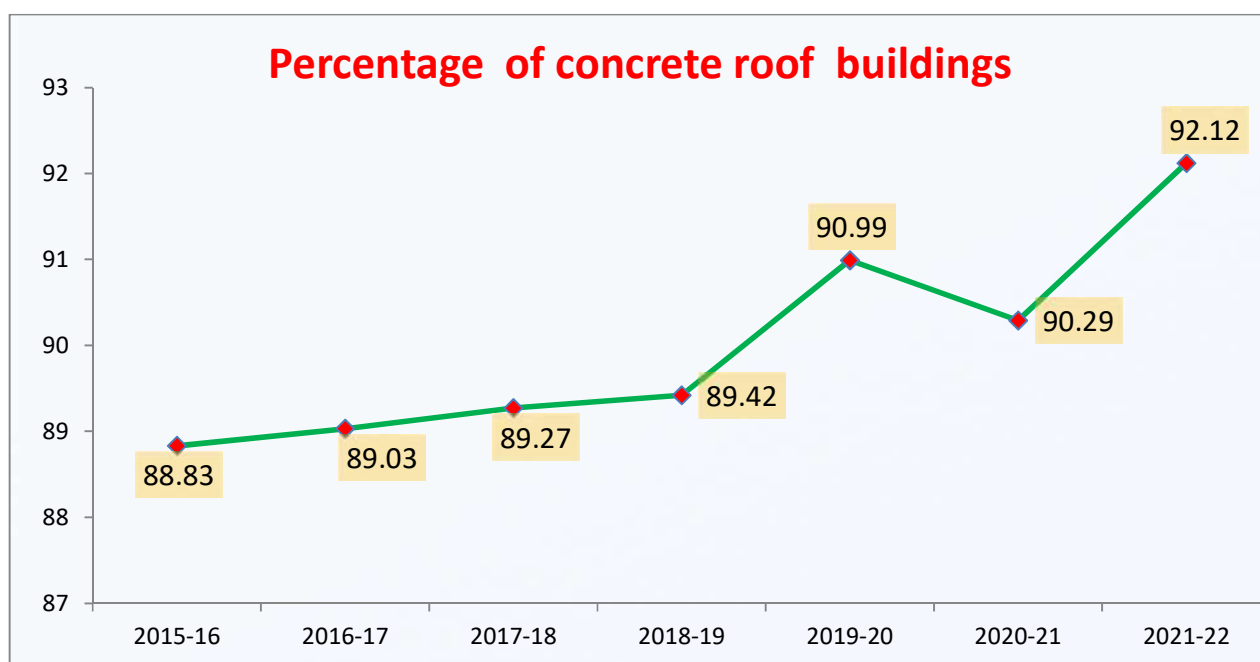

The cumulative impact of seven years of commercial building construction in Kerala is reflected in the total count of 5,18,476 commercial buildings. The dip in commercial buildings in 2020-'21 is a direct result of the global pandemic, Covid-19. In this year, 2021-'22, the number of commercial buildings built are 89,443 and is 21.52% more than previous year. The substantial rebound in 2021-'22 showcases a rejuvenated focus on commercial development, reflecting a positive economic outlook and recovery.

Roofing of buildings since 2015-'16

The cumulative figures in the following table provide an overarching view of the extensive construction activities, reaching a total of 27,25,643 buildings over the seven-year period. Out of total number of buildings made since 2015-'16, 18,629 are thatched buildings, 74,909 are tiled buildings, 24,53,551 are concrete buildings and 1,78,554 are other roof type buildings.

The cumulative impact of seven years of building construction in Kerala is reflected in the total count of 24,53,551 concrete buildings. This figure underlines the integral role of concrete in shaping the state's urban and rural landscapes. Percentage of concrete roofed buildings built since 2015-'16 shows a steady increasing tendency except for the year 2020-'21. The dip in 2020-'21 may be attributed to external factors such as the global pandemic, which influenced construction activities and

material availability. Percentage of total number concrete roofed buildings that has been built since 2015-'16 is 90.02%. This year percentage of concrete roof buildings is 92.12, ever greatest since 2015-'16.

The total cumulative percentage of tiled buildings built over the entire period calculated is at 2.75%. This average reflects the overall contribution of tiled

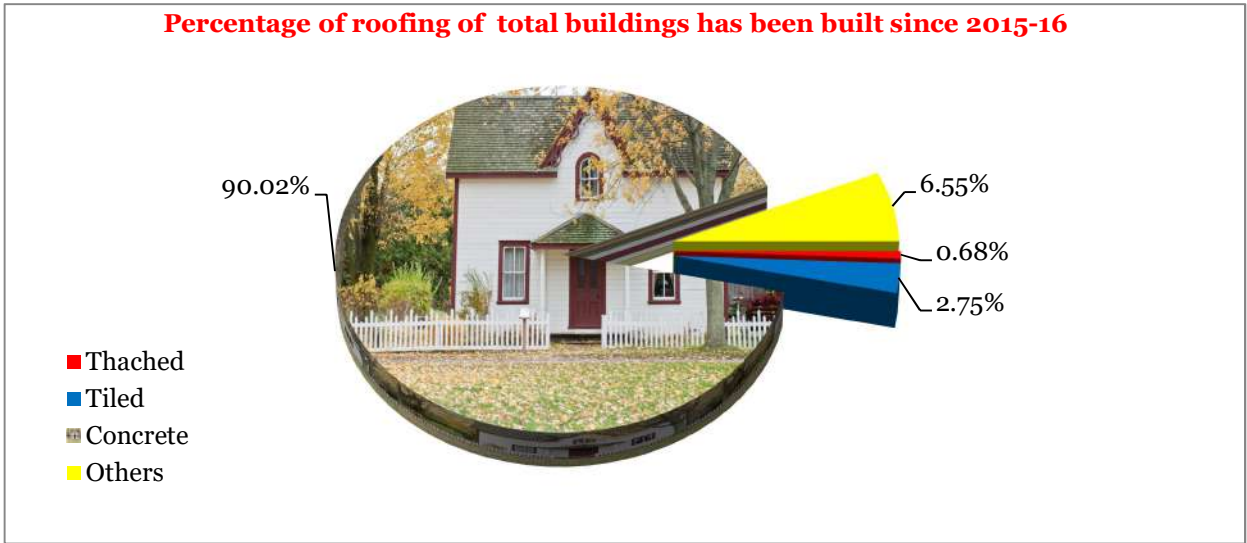

structures to Kerala's construction during these seven years. Total number and percentage of tiled buildings built since 2015-'16 is 74,909 and 2.75 respectively. The declining trend of tiled roof buildings in recent years may signify a growing inclination towards modern roofing materials (concrete).

The data reveals the gradual decline in the construction of thatched buildings over the years, indicating a shift towards more durable and modern roofing materials. During all these years, from 2015-'16, percentages of thatched buildings newly built in each year is below one percentage. Out of total number of buildings built since 2015-'16, 18,629 are thatched buildings, and it is about 0.68% of the total buildings. In this year, 2021-'22, percentage of thatched buildings is 0.48%.

Male-Female ownership in private buildings

The data provided here sheds light on the ownership distribution of buildings in Kerala across the financial years from 2015-'16 to 2021-'22, with a specific focus on male and female ownership.

Year	Male ownership	Female ownership	Female-Male Ratio
2015-'16	257813	95754	1:2.7
2016-'17	279271	101696	1:2.7
2017-'18	265620	97174	1:2.7
2018-'19	301075	109677	1:2.7
2019-'20	298468	122383	1:2.4
2020-'21	254453	93677	1:2.7
2021-'22	282698	104246	1:2.7
Total	1939398	724607	1:2.7

The male ownership is more than female ownership in the case of private buildings. The total number of private buildings owned by male is 19,39,398 and female is 7,24,607 since 2015-'16. Throughout the seven-year period, the female-male ownership ratio remains remarkably steady at 1:2.7. This steadfast ratio indicates a persistent trend of property ownership in Kerala.

Conclusion

Building-related statistics serve as principal component of assessing the infrastructure development. The information on building statistics is highly useful for Town Planning department and planners who seek the trends in construction sector.

Residential buildings claim a lion's share, constituting 73.58% of the total, with a nuanced breakdown showcasing a preference for houses over other residential structures. Commercial buildings represent the majority, constituting a significant 85.52% of the total non-residential buildings. The robust growth in commercial constructions, accounting for 21.52% of non-residential buildings, more than previous year reflects the state's economic vibrancy and entrepreneurial spirit. Concrete roofing emerges as the material of choice for 92.12% of new constructions, symbolizing a modern shift towards durable and contemporary construction practices. However, the minimal adoption of thatched roofing (0.48%) suggests the fading tradition of indigenous architectural methods. The male-female ownership ratio in private ownership indicates a higher prevalence of male ownership, reflecting traditional property ownership patterns.

High building density in certain districts necessitates strategic urban planning to manage infrastructure, traffic, and environmental concerns. Districts, with high building densities may require specific attention to sustainable development practices. Districts with moderate density shall focus on maintaining a balance between development and environmental conservation, ensuring that growth is sustainable and inclusive. The low building density in certain districts, particularly Idukki, may be influenced by geographical constraints. Policymakers should consider implementing tailored strategies to address the unique challenges faced by these regions.

The concentration of residential constructions in certain districts aligns with population distribution patterns. Some districts witness higher construction activities, while other districts have a more balanced development approach. The high number of residential constructions underscores the demand for supporting infrastructure. This includes amenities like schools, healthcare facilities, and transportation networks, necessitating strategic urban planning to cater to the growing population. Districts with a higher concentration of industrial buildings may require targeted infrastructure development to support industrial activities, including transportation and utilities. Policymakers can use this data to evaluate the effectiveness of government-driven construction initiatives and adjust policies accordingly. Addressing the decrease in the count of buildings constructed by Government/Local Bodies may require a reassessment of strategies and resource allocation.

The correlation between economic activities and residential construction is evident (i.e. positive). Districts with a notable number of commercial and industrial presences report a significant number of residential buildings. Malappuram's notable performance in non-residential construction suggests a thriving economic environment, possibly driven by commercial and industrial activities. This trend can be indicative of economic growth and diversification in the region. Across districts, there is a consistent presence of commercial buildings alongside non-residential structures, emphasizing the economic vibrancy and diverse business activities in different regions of Kerala. Districts such as Malappuram and Thrissur, boasting a substantial number of commercial buildings, emerge as commercial hubs, along with Ernakulam and Kozhikode. This reflects their significance as economic and business centers within the state.

In conclusion, the 'Building Statistics Report of Kerala in 2021-'22' offers a comprehensive snapshot of the state's building construction landscape. The data not only reflects the magnitude of development but also serves as a compass for future

planning and policy formulation. The trends identified provide a foundation for evidence-based decision-making. As Kerala navigates the balance between urbanization and rural development, this report serves as a valuable resource for assessing continued progress and prosperity of the state.
