

GOVERNMENT OF KERALA

**GROSS DOMESTIC PRODUCT
OF KERALA AND INDIA
FROM 2004-05 TO 2012-13
(BASE YEAR 2004-05)**

DEPARTMENT OF ECONOMICS AND STATISTICS
THIRUVANANTHAPURAM

P R E F A C E

The State Domestic Product is estimated annually by the Department of Economics and Statistics (DES) based on the guidelines, methodology and definitions prescribed by the Central Statistical Office (CSO) in conformity with the U. N. System of National Accounts (1993). The state domestic product thus prepared by the Department is invariably reconciled with the CSO before finalization.

This present publication reveals the estimates of Gross Domestic Product (GDP), Net Domestic Product (NDP) and Per capita Income of Kerala and India from 2004-05 to 2010-11 and 2011-12(Provisional) and 2012-13(Quick), both at Current and Constant (2004-05 base year) prices. The detailed estimates of sub sectors and methodology of estimation are also included in this issue.

The series of State Domestic Products and Per Capita Income of Kerala and District Domestic Products from 2004-05 have been modified according to the revised rates provided by CSO, Government of India, Government of Kerala and Population figures provided by Registrar General of India through CSO.

The dedicated efforts made by all Officers and Staffs of State Income Division of DES to bring out this publication are very much appreciated. I hope that this publication is useful to administrators, planners, researchers and others engaged in developmental activities.

INTRODUCTION

The concept of National/State Income forms the basis of economic growth. Economic growth deals with various aspects of economic activities in connection with economic development of a nation. The significance of national income lies precisely in the fact that it is a measure of the economic well-being of the community. It also provides a birds-eye view of economic activity in the country. Estimates of national/state income serve a wide variety of purpose such as distribution of income among factors of production such as land, labour, capital and organization in the form of wages, interest, rent and profits. The national/state income per head is of great importance in the studies relating demand for consumer goods and supply of personal savings. National income calculation tells us the economic progress of a country and it can be used to compare the material standards of living of the people in two countries. National/State income estimate is also important in assessing the taxable capacity of the people. The national/state income data are indispensable instrument of economic planning, by providing the success and failure of the plan, judged on the basis of the growth of national/state income.

Economic growth is a process by which the real national income and per capita income of a country increase over a period of time. Changes in national income, i.e. goods and services produced over a period of time of members of community, represent the rate of economic growth. A high rate of economic growth raises the standard of living of the people, and a low rate of growth lowers it.

The major problem in developed and developing countries is how to eradicate poverty, unemployment and raising standard of living of the people. These problems can be solved only by means of accelerating economic growth. Therefore, we must have some standard or measure to evaluate the performance of an economy in terms of growth. This standard or measure is provided by national/state income accounting. The national/state income figures of a country over a number of years enable us to find out the actual performance of the economy in terms of the targets set for its growth. In the context of economic planning national income accounting has special significance. It helps the planners to know whether there is any improvement in the standard of living of the people or to what extent poverty in the country has been eliminated. Thus, national/state income is the measuring rod or indicator of the economic growth of a country.

The Directorate of Economics and Statistics (DES) is the nodal agency for the coordination of statistical activities in the state. DES annually estimates the State Domestic Product (SDP) and District Domestic Product (DDP) using the concepts and methodology approved by the System of National Accounts (SNA) of the international agencies and finalize after the reconciliation with CSO.

State income is the measurement, in monetary terms of all the goods and services that an economy with in the geographical boundaries of the state, without duplication, within a given period of time, generally a year. The goods cover all possible items like agricultural crops, livestock products, fisheries, forest products, manufacture of materials in the registered and unregistered sectors, construction of buildings, roads etc. Services cover medical and educational services, domestic services, hotels, restaurants, trade, transport and public services etc.

The products in different units and different measures of services produced in the economy are not directly additive in nature. To overcome this difficulty the value of all goods and services produced is measured in monetary terms. The aggregate of all the money value of final goods and services produced in the state during an accounting year represents the state income. It should be ensured that the measurement of total value of products is counted without duplication while measuring the total.

The income of a state can be measured in three alternative ways, viz., production approach, income generation approach and final utilization approach. The state income accounting starts at the production stage, where the productive units engage capital and labour and turn out goods and services, the total measure of which gives the state product. This production process generates a given amount of money income, which is distributed by the productive units to the two factors of production, viz., labour and capital. The measures of state income in this phase indicate the share of state product distributed to the two factor shares. The income thus received by the factors of production is spent for acquisition of goods and services for consumption, or by the producers in acquiring more capital goods and increasing the physical assets of their productive units. The state income by definition is the same whether measured at the point of production or at the point of income generation or at the point of final utilization. The state income can thus be measured in any one of these alternative approaches but if a complete analysis of the economy is the object, then it should be measured by all the three different approaches simultaneously.

For the measurement of state income at the point of production, it is important to remember that the value added by production is to be counted without duplication, i.e. not only the total values of commodities and services produced over a given period of time, but also the value of final products, excluding the value of inputs of all raw materials and services used in the process of production. The method followed for this purpose is to divide the economy into a given set of industrial sectors and estimate the total value of outputs within each sector as well as the total value of inputs of raw materials and services used for production and then estimate the value added by the sectors as the total value of output minus the value of inputs used as intermediate consumption.

CONCEPTS AND DEFINITIONS

THE BASIC ECONOMIC ACTIVITIES

The basic economic activities of an economy are Production, Consumption and Capital formation. These activities are also called vital processes of an economy.

(i) Production

In the ordinary sense production means manufacturing of some tangible or material goods like agricultural crops, livestock products, fish, forest products, machines etc., but when it used in Economics it has a wider meaning. The act of making and providing goods and services is called production in Economics. Production thus represents not only tangible goods but also non-tangible goods or services like those of doctors, teachers, etc.

(ii) Consumption

Consumption is the second vital process of an economy. It is the act of using goods and services to satisfy human wants. The standard of living of the people is determined by their consumption level. People purchase goods and services to satisfy their wants. So far as the consumption of goods is concerned, there is time gap between their production and consumption. They are produced first and consumed only after some time. But in the case of services there is no time gap between their production and consumption. Their consumption takes place along with their production.

(iii) Capital Formation

Capital formation is the process of adding capital to the existing capital stock. It is the third important flow, and it leads to investment. In any growing economy, production in an accounting year would be normally higher than consumption. This surplus of production over consumption takes the form of goods that are used for further production. This is capital formation and it results in investment. The level of investment determines the rate of growth of an economy. For a higher rate of growth a higher level of investment is needed. Developing countries are poor because the rate of capital formation in these countries is very low. Capital formation consists of the construction of new assets like buildings, roads, bridges, dams and transport equipments, production of machinery and equipments increase in stock of materials, semi-finished goods and finished goods during an accounting year.

STATE INCOME

State income or State Domestic Product (SDP) is a measurement in monetary terms of all the goods and services that an economy with in the geographical boundaries of the state without duplication within a given period of time, generally a year. For the purpose of estimations of SDP the state economy is

broadly classified as Primary, Secondary and Tertiary sectors. Estimates of these sectors are prepared individually by adopting one or more of the following approaches.

- (i) Production Approach
- (ii) Income approach
- (iii) Expenditure approach

(i) **PRODUCTION APPROACH**

In this method, the sum of economic value of all goods and services produced is considered after deducting the inputs consumed in the process of production. This approach is followed in Agriculture, Livestock, Fishing, Forestry and Logging, Mining & Quarrying and Manufacturing (registered) sector.

(ii) **INCOME APPROACH**

In this method the income accrued to the factors of production namely land, labour, capital and entrepreneurship in the form of rent, salaries and wages, interest and profit are taken into account in estimation of value added. This approach is being followed in manufacturing (Un regd.), Electricity, Gas and Water supply, Trade, Hotels & Restaurants, Transport Storage and Communication, Banking and Insurance, Real Estate, Business services, Public Administration and Other Services.

(iii) **EXPENDITURE APPROACH**

This method is based on the measurement of income at the stage of disposal. In any production process all the items produced are either ultimately consumed or a part of it is saved for further consumption or future production of goods and services. i.e., the total money value of consumption expenditure and the saving gives the income. This approach is used in estimating income from construction sector.

Value of Output

In an economy various production units produce different types of goods and services. The money value of goods and services produced are called Value of Output.

Value Added

Value Added is a concept that measures the value of production carried by an enterprise. In order to produce goods and services the enterprise uses many intermediate goods. These goods are purchased by the enterprise from other enterprises or taken from the same enterprise. So an enterprise alone is not responsible for the full value of its output. It only adds value to the intermediate products purchased from other enterprises and used in the process of production. Therefore to find out the exact contribution of an enterprise to the total output, the value of its intermediate consumption is deducted from the value of its total output. The exact contribution given to the product represents the value added by the enterprise in the process of production.

Financial Intermediation Services Indirectly Measured (FISIM)

The banking enterprises render services to their customers in the form of maintaining their accounts and providing them banking services. In return for these services, customers are charged nominal amount, which is substantially smaller than the expenses of the banking enterprises. On the other hand, the banks provide loans and advances and the return on such transactions are much higher than the payment made to depositors. This net return accruing to banks is large enough to meet their expenses and to earn a profit. If the financial enterprises are treated like any other productive enterprise, their income in the production account would only be limited to the charges made on customers which would mean that the banks would have a negative operating surplus and most likely negative value added. To circumvent this difficulty, an imputed income equivalent to interest and dividend receipts of banking and financial enterprises, net of interest paid to depositors is defined as Financial Intermediation Services Indirectly Measured (FISIM) (income earned in return for services rendered), is entered as a receipt item in the output of the financial enterprise. The output of the financial enterprise thus includes interest received, which has paid by the producing industries. As the interest paid by the industries already accounted for in the GDP of the respective industries, its inclusion in the GDP of banking industry accounts to duplication. To avoid this duplication FISIM is allocated to the user industries as intermediate input. The FISIM which form component of financial sector output is partly treated as intermediate consumption of industries and partly as the final consumption of Government and the households. For determining these proportions the basic data on loans and deposits relating to enterprises and consumers are used. These are taken from the same source material from which value added is estimated.

The proportion of imputed service charges so worked out for different economic activities are treated as a separate input item in the respective sectors. In case of household and government such charges are considered as an item of private and government final consumption expenditure. FISIM has been allocated to all user industries. The industries to which FISIM has been allocated are agriculture, livestock, forestry, fishing, mining and quarrying, manufacturing (registered and unregistered), electricity and gas, transport, construction, storage, trade hotels and restaurants, business services and other services.

Consumption of Fixed Capital (CFC)

The consumption of fixed capital (CFC) is the replacement value of reduction in the assets used up in the process of production during the accounting period resulting from deterioration, normal obsolescence or normal accidental damage. The CFC is calculated for all fixed assets, i.e. tangible (buildings, other construction, roads and bridges, transport equipments and other machinery and equipments) and intangible

fixed assets (software and mineral exploration) owned by producers. Fixed assets must have been produced as outputs from the process of production. Exceptions to the above cases are the following.

- (i) CFC is not calculated for valuables that are acquired precisely because their value, in real terms, is not expected to decline over time.
- (ii) Livestock
- (iii) Non-produced assets such as land, mineral or deposits
- (iv) Work in progress and
- (v) Value of fixed assets destroyed by acts of war or major natural disasters.

Gross & Net Domestic Products

There is some wear and tear to the capital goods used in the production process resulting in a reduction in their economic life. This measurement of wear and tear is known as consumption of fixed capital (CFC). The estimate of value added without any adjustment of consumption of fixed capital is termed as gross domestic product. When an adjustment is made for this wear and tear, the resultant aggregate is known as net domestic product.

Factor Cost and Market Prices

Production and the income approach measures domestic product at the cost paid to the factors of production and known as domestic product at factor cost. But at the expenditure, value of the product is at market prices, i.e. at the actual prices which, either the consumers or the producers, pay for purchase of goods and services, whether for consumption or for capital formation. This measurement of domestic product through the expenditure side is known as domestic expenditure at market prices. This market value of the final expenditure would exceed the total obtained at factor cost by the amount of indirect taxes levied by the government less the value of subsidies given by the government to producers. The domestic product can, therefore, be measured either at factor cost or at market prices, one differing from the other by the amount of net indirect taxes (i.e. indirect taxes less subsidies). It will be seen that indirect taxes add to the prices paid by the consumers / producers while the subsidies have the opposite effect. It is for this reason that the measurement at market price is obtained after adjustment for net indirect taxes.

Base Year

To capture the structural changes in the economy, to incorporate results of long term surveys (as they are not included in between), to incorporate latest international standards, to make methodological improvements, to realistically measure the real growth in the economy, we change the base year time to time.

Current & Constant Prices

The SDP estimates at current prices are obtained by evaluating the goods and services at prices prevailing during the year. The estimates of SDP at current prices, over the time do not reveal actual economic growth because these contains the combined effect of the changes in the volume of goods and services and the changes in the prices of goods and services. This estimates compared over period would not give the real increase in production of the state or the economic welfare of the people or growth of the economy. In order to eliminate effect of price changes or inflation, the estimates of SDP are estimated by evaluating the goods and services at the prices prevailing in the base year is known as estimates at constant prices.

Classification of Economy

The UN/CSO classified the entire economic activities into the following sectors and sub sectors and items.

Primary Sector- Agriculture (Agriculture proper & Livestock), Forestry & Logging, Fishing, Mining & Quarrying.

Secondary Sector- Manufacturing (Registered & Unregistered), Electricity, Gas, Water supply, & Construction.

Tertiary sector- Transport, Storage & Communication, Trade, Hotels& Restaurants, Banking & Insurance, Real Estate, Ownership of Dwelling & Business, Public Administration & Defence, Other Services.

Contribution of various sectors into the Tertiary Sectors of Kerala & India at Constant Prices

AGRICULTURE

The contribution of this sector to the Gross State Domestic Product (GSDP) is estimated in terms of Gross Value Added (GVA) using the production approach. The estimation of GVA involves valuation of the products and by-products and ancillary activities at the prices received by the producers and deducting there from the value of inputs of raw materials and services consumed in the process of production at purchaser's prices. In respect of operation of irrigation system by Government sources, income approach is used.

The agriculture sector includes agriculture proper, livestock and operation of irrigation system. The agriculture proper includes various crops including plantation crops, agricultural and horticultural services and ancillary activities etc. The livestock sector covers breeding and rearing of animals and poultry, production of milk, slaughtering, preparation of meat, production of raw hides and skins, eggs, dung, honey and increment in livestock.

In respect of the sub-sector agriculture proper, the estimates of value of output are prepared separately for all the crops under consideration. These crops are divided into four categories, namely, principal crops, minor crops, miscellaneous, and unspecified crops & other products and by-product. The estimates of value of output for the principal crops are prepared using the production and price data made available by the

Directorate of Economics and Statistics. The prices relating to the peak marketing period prevailing in the primary market centers are also compiled by the Directorate of Economics and Statistics. The source for production figures of other minor crops like coffee, rubber and opium are obtained from the Coffee Board, Rubber Board and Central Bureau of Narcotics, respectively. Utilizing the information on processed tea received from the Tea Board arrives at the estimated production of tea. The miscellaneous and unspecified crops cover other cereals, other oil seeds, other sugars, other fibers, other dyes and tanning material, other drugs and narcotics, other condiments and spices, other fruits and vegetables, fodder, miscellaneous food crops, grass and miscellaneous non-food crops. The products and by-products include stalks and straw, arhar, sesamum, jute and cotton sticks, bagasse and cane trash.

The estimates of value of output for the livestock sector are prepared separately for the items, milk, meat group, eggs, wool and hair, dung, honey and increment in livestock. In the case of meat group, which comprises meat (including edible oils & glands and poultry meat), meat products (fats, legs, head, etc.) and by-products (hides, skins, guts, blood, bones, horns, hoofs, etc), the production is estimated with the help of yield rates and number of slaughtered animals, furnished by the State Animal Husbandry Departments (AHD). The estimates of other meat products and by-products the value of output has been estimated as a percentage of the total value of meat production using certain ratios of meat production for different categories of animals.

The estimates of poultry meat are prepared in terms of number of adult fowls and chickens slaughtered using the information on utilization of eggs and chickens survived. The estimates of dung are prepared using the results of Integrated Sample Survey (ISS) conducted by AHD. The utilization rates of dung used as manure and used as fuel are also supplied by the Department of AHD. The estimates of increment in livestock population are estimated by extrapolating the population figures available from the successive Indian Livestock Censuses.

In order to avoid double counting of value of product, the value of inputs, which are also outputs of some items, are deducted, to arrive at the GVA. The inputs, generally being common to both livestock and agriculture sub-sectors, are estimated for the sector as a whole. Thus, GDP estimates are not separately available for the agriculture and livestock sub-sector. The inputs of agriculture sector are divided into ten items, namely, seed, organic manure, chemical fertilizers, current repairs, maintenance of fixed assets and other operational costs, feed of livestock, irrigation charges, market charges, electricity, pesticides and insecticides and diesel oil. Adjustment is made towards the consumption of these items by the animals, which are not directly connected, to agriculture sector. The estimates of irrigation charges are based on the information available from the state irrigation departments.

FORESTRY AND LOGGING

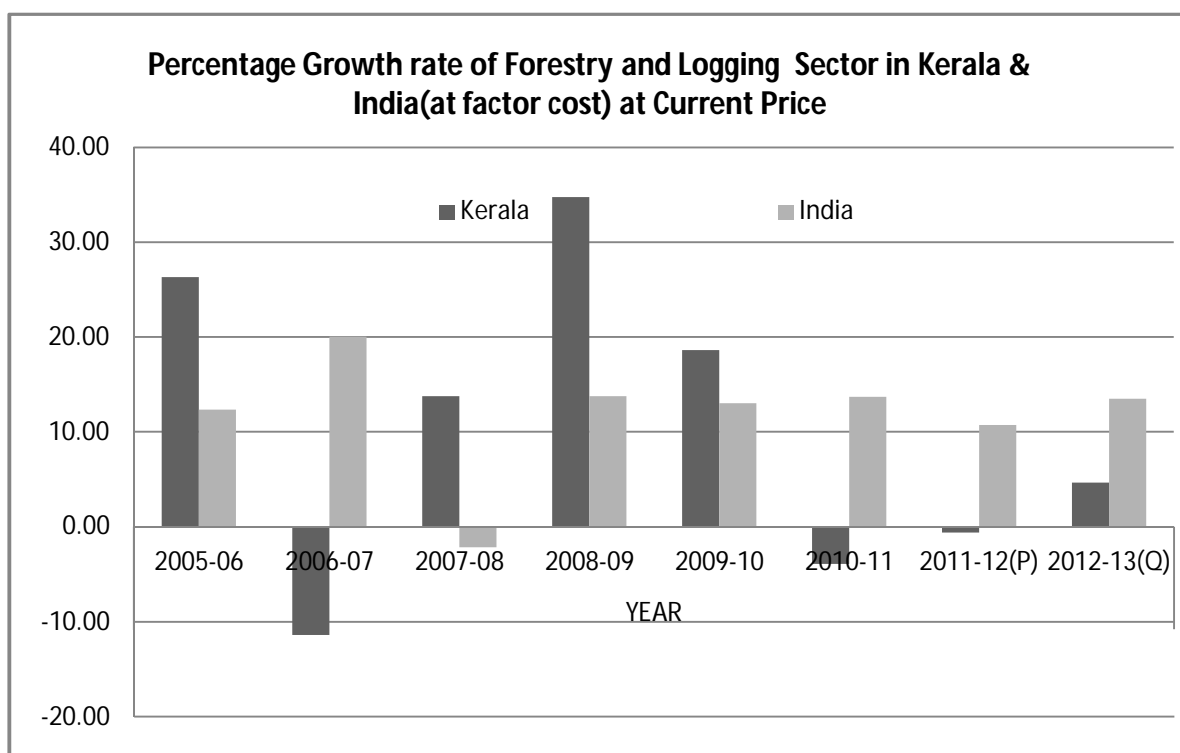

The GDP from this sector can be estimated in terms of GVA by following the production approach. The production approach involves the estimation of the total value of output at factor cost and deducting there from the various inputs at purchases prices, which are used in the process of production. Since the forests are generally under the administration of government, data on production and prices are not difficult to obtain. For the private forests, if any, detailed data could be obtained from the concerned enterprises. For estimating the production of forest produce, which is lifted by the people living in surrounding areas either with permission or through unauthorized means (like minor forest products and firewood), household consumer expenditure surveys and type studies in the habitations around the forests could give the necessary data. As regards inputs, Based on an analysis of budget documents of the State Forest Departments for the year 2004-05, input rate in forestry has been revised to 15.6% of the value of output.

Fishing

In the State income accounts, the GVA from the fishing sector is estimated by the production approach. It involves the estimation of total value of output at factor cost and deducting there from the value of various inputs at purchases prices which are used in the process of production.

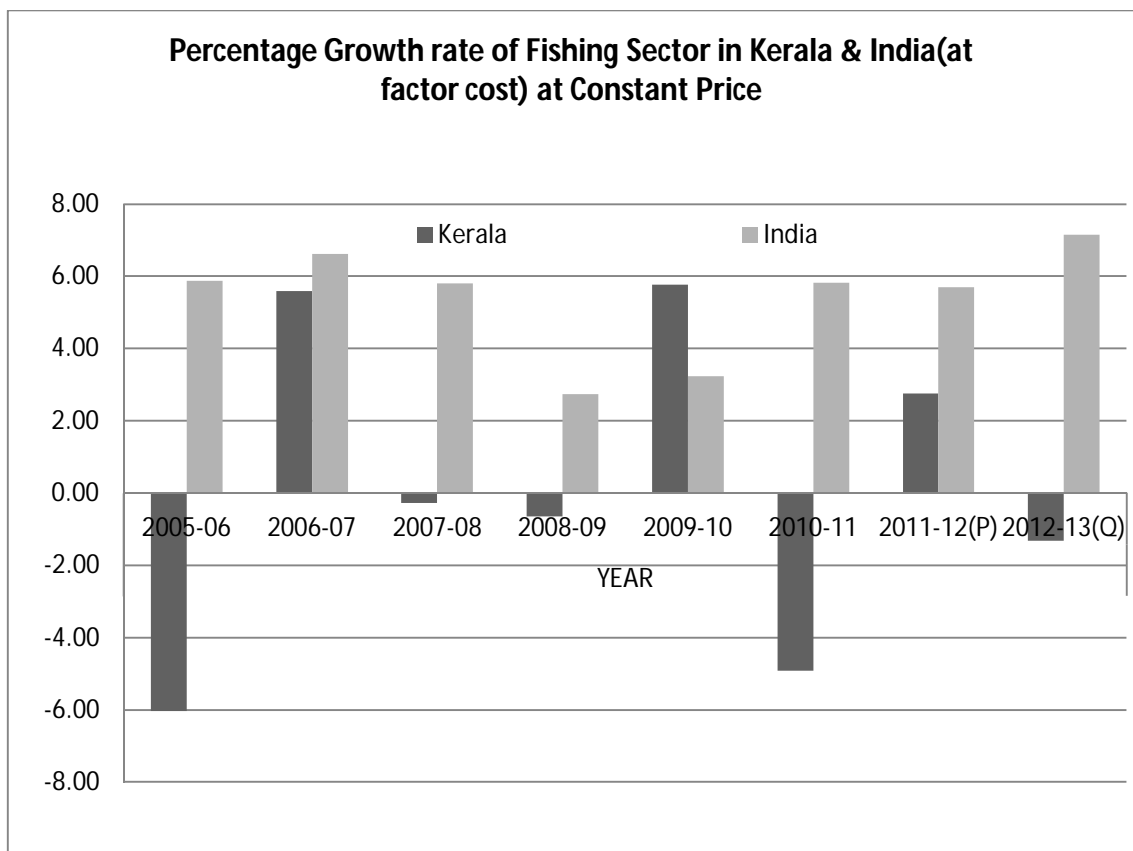

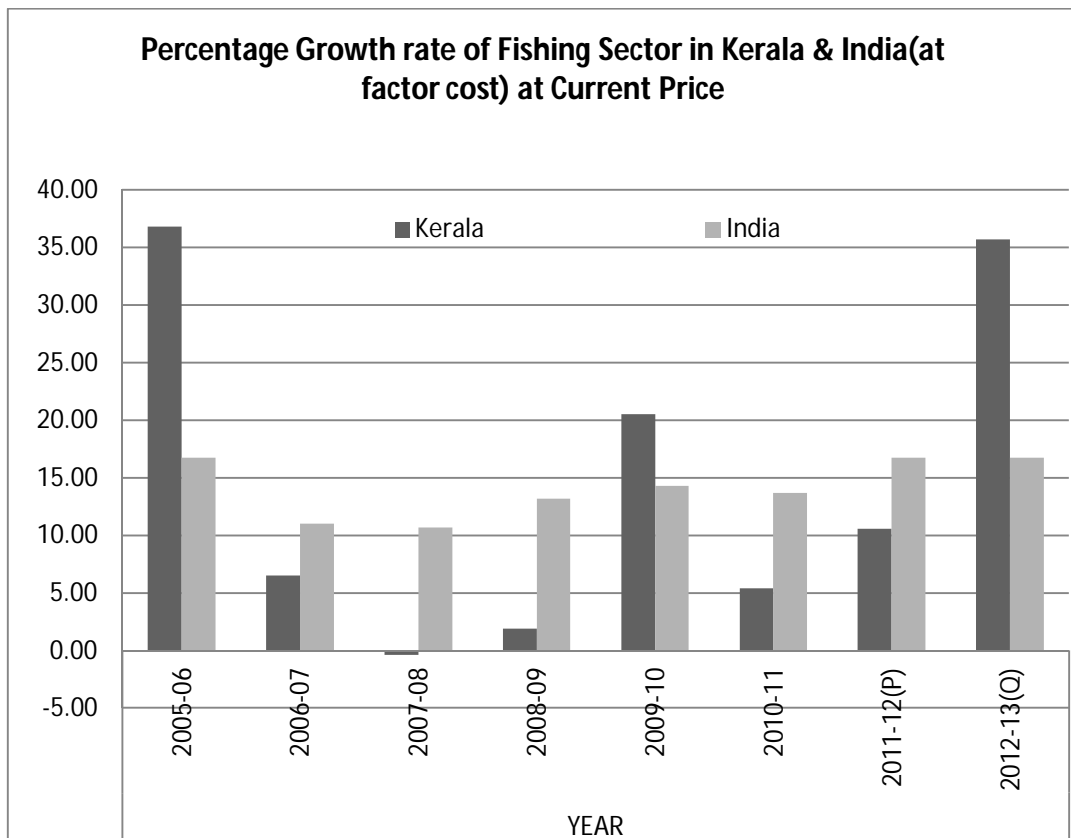

The activities covered in this sector are (i) fishing in ocean, coastal, offshore and inland water for commercial purposes (ii) subsistence fishing in inland water (iii) gathering of sea weeds, sea shells & other ocean and coastal water products and (iv) fish curing. Data on production, prices and value of fish catch are supplied by the Fisheries Department.

Mining and Quarrying

The estimates of GVA in this sector are prepared following the production approach. The value of output of each mineral, is calculated at state level, and by deducting the value of corresponding inputs, GVA is estimated.

This sector comprises extraction of minerals, which occur in nature as solids, liquids or gases with all supplementary operations for dressing and beneficiating ores, and other crude minerals such as crushing, screening, washing, cleaning, grading, milling, floatation, melting, pelletizing, topping and other preparations needed to render the material marketable. All these activities are covered to the extent they are carried on at the mine site. Production of rock salt is included but production of salt obtained by evaporation of water from sea, lake etc., is excluded from the preview of this sector and included under manufacturing. The expenditure on preparing mining sites, prospecting and boring activities are not included here as they are included under the construction sector. The major source of data for fuel minerals is the Indian Bureau of Mines (IBM).

For calculating the value of output, the mining and quarrying sector is divided into two broad groups viz., major minerals and minor minerals. The major minerals cover fuel minerals consisting of coal, lignite, petroleum and natural gas and other major minerals i.e. metallic minerals including atomic minerals and non-metallic minerals.

Manufacturing (Registered)

The registered manufacturing segment covers all manufacturing factories registered under sections 2m(i) and 2m(ii) of the Indian Factories Act, 1948 which respectively refer to the factories employing 10 or more workers and using power or those employing 20 or more workers but not using power on any day of the preceding 12 months and bidi and cigar establishments registered under Bidi and Cigar Workers (Condition of Employment) Act, 1966 and employing 10 or more workers using power or 20 or more workers and not using power. Estimates of GSDP for registered manufacturing are prepared by following the production method. The industry-wise estimates are prepared on the basis of results of Annual Survey of Industries. For the years for which ASI results are not available, the growth observed in the Index of Industrial Production (IIP) of either the State IIP or the all India IIP of the CSO, is used at compilation category level. These estimates, as prepared undergo changes as soon as ASI results become available.

Manufacturing (Un-Registered)

The unregistered manufacturing segment -being complementary to registered manufacturing segment - covers all those units which are not covered under the registered manufacturing segment. In other words, the unregistered manufacturing segment covers all the manufacturing, processing, repair & maintenance services units employing less than 10 workers and using power or less than 20 workers and not using power. It, by implication, also covers own account enterprises (OAE) engaged in the manufacturing activities. Estimates for manufacturing (unregistered) are first compiled for the base year and are extrapolated to later years using relevant indicators.

The estimates of GSDP from manufacturing (Unregistered) for the base year are compiled by multiplying the workforce engaged in manufacturing unregistered with the value added per worker (VAPW) (compiled at compilation category level, separately for rural and urban areas). The base year estimates are also compiled separately for the units belonging to the Micro, Small and Medium Enterprises (MSME) segment (other than those covered under the ASI), and other non-MSME segment of unregistered manufacturing sector. The estimates for the units belonging to MSME sector for the 2004-05 base year series are based on the state wise results of Fourth All-India Census on MSME, 2006-07 published by Development Commissioner, Micro, Small and Medium Enterprises (MSME) and the value added ratios of unorganized manufacturing sector estimated from NSS 62nd (2005-06) survey. The estimates for the non-MSME segment have been compiled, at compilation category level using the value added per worker estimates from NSS 62nd Round results and the corresponding estimates of workforce from the results of EUS, NSS 61st (2004-05) Round and Population Census 2001. Suitable adjustments are made to bring the estimates to the price levels of 2004-05, in respect of data pertaining to the years other than 2004-05. Estimates for subsequent years are first worked out at constant prices and the constant price estimates are then inflated by relevant price indices to obtain the current price estimates for the corresponding years. The estimates at constant prices for the subsequent years are compiled by moving forward the industry wise estimates for the year 2004-05 with the help of either all-India IIP or the State level IIP, if available, at the compilation category level.

Electricity, Gas & Water supply

The economic activities relating to generation, transmission and distribution of electric energy are covered under the electricity sub-sector, the manufacture of gas in gas works including gohar gas and distribution through mains to household, industrial, commercial and other users are covered under the gas sub-sector and the activities associated with collection, purification and distribution of water excluding the operation of irrigation system are covered under water supply sub-sector. GVA is estimated as the sum of gross factor incomes in the case of electricity and water supply sub-sectors and as gross output less input in the case of gas sub-sector.

Electricity: The GVA estimates for this subsector are prepared using the income method. The estimates are based on the analysis of annual accounts of State Electricity Boards and other electricity undertakings located in the State. The value added estimates of central undertakings, viz. National Thermal Power Corporation, National Hydro Power Corporation and Power Grid Corporation made available are also added.

Gas: Data sources utilized for the estimation of gas sector GVA are the accounts of the Gas Authority of India Ltd. Estimates in respect of gohar (organic) gas were prepared from the data supplied by Khadi and Village Industries Commission.

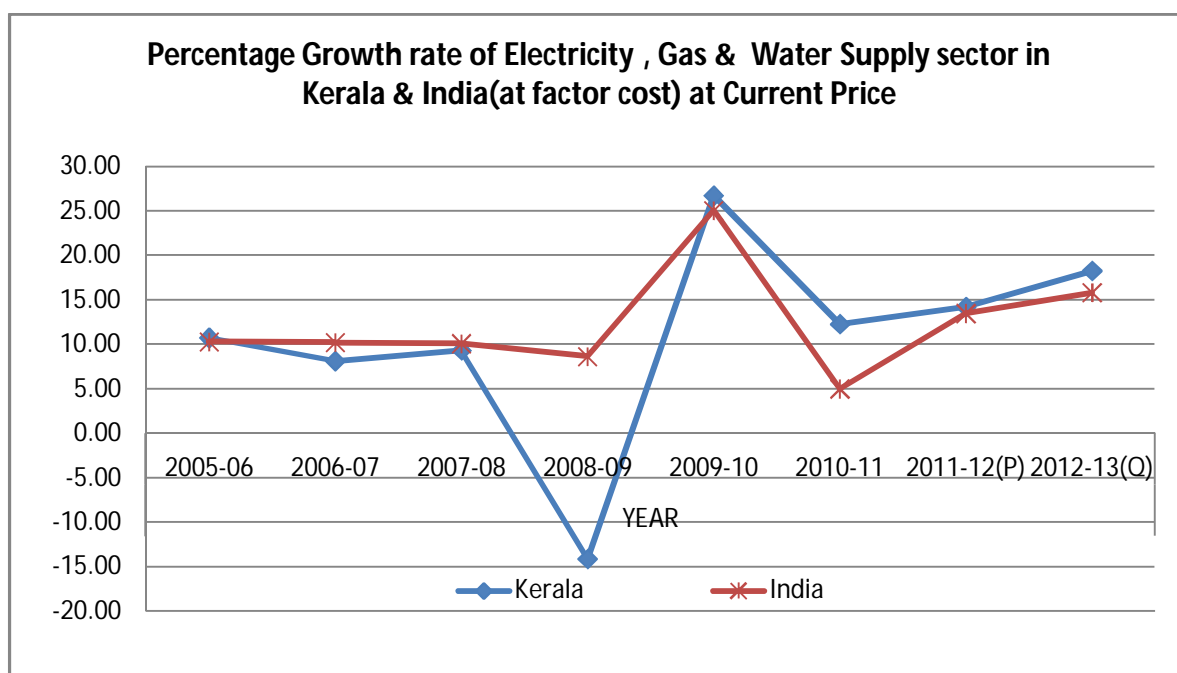

Water Supply: In the case of government Kerala Water Authority (KWA) and municipal water supply undertakings GVA is to be taken as compensation of employees. To get the GVA from KWA, the annual Financial Statements of KWA are used. Estimates of CFC worked out are added to obtain the estimates of GVA.

Construction

The 'construction' broadly comprises to components namely (i) accounted construction (pucca construction) and (ii) un accounted construction (katcha construction). In each category, both the new construction and repair and maintenance are covered. The output of construction of the total economy is compiled by a composite methodology including both commodity flow approach and expenditure approach and taken as the total production costs of accounted and unaccounted construction. The value of accounted construction undertaking with the use of construction materials such as cement, steel, bricks, timber, fixtures etc. is determined by commodity flow method. The value of output in, kutchra construction in public sector and private corporate sector is estimated from the data available in annual budget documents of the government and the annual reports of related firms. In the case of household sector the component of kutchra construction works is estimated from the All India Debt and Investment Survey (AIDIS) results. For pucca construction, based on information available from Central Public Works Department, National Building Organisation and survey results, a fixed percentage of material inputs is taken as factor inputs i.e., GVA in the base year and for subsequent years the value of material input is duly adjusted for wage and price indices. Deflating the current price GVA estimates by suitable price indices arrives at estimates at constant prices.

Railways

Estimates of GSDP for railways are considered as part of supra-regional sectors and the national level estimates are allocated to States by the CSO. Railway budget is analyzed and three sets of accounts, namely, the production account, the income and outlay account and the capital finance account are prepared for the complete activity of government railways. The GVA at current prices is obtained from the production account as the sum of compensation to employees and gross operating surplus. The GVA thus obtained relates to the entire activity of the government railways. Since it includes GVA pertaining to the manufacturing, construction and the other services activities also within government railways, these are subtracted from the total GVA to arrive at the current price estimates of GVA on government railways transport services. To this is added the GVA for non-government railways, the share of which is, however, quite small.

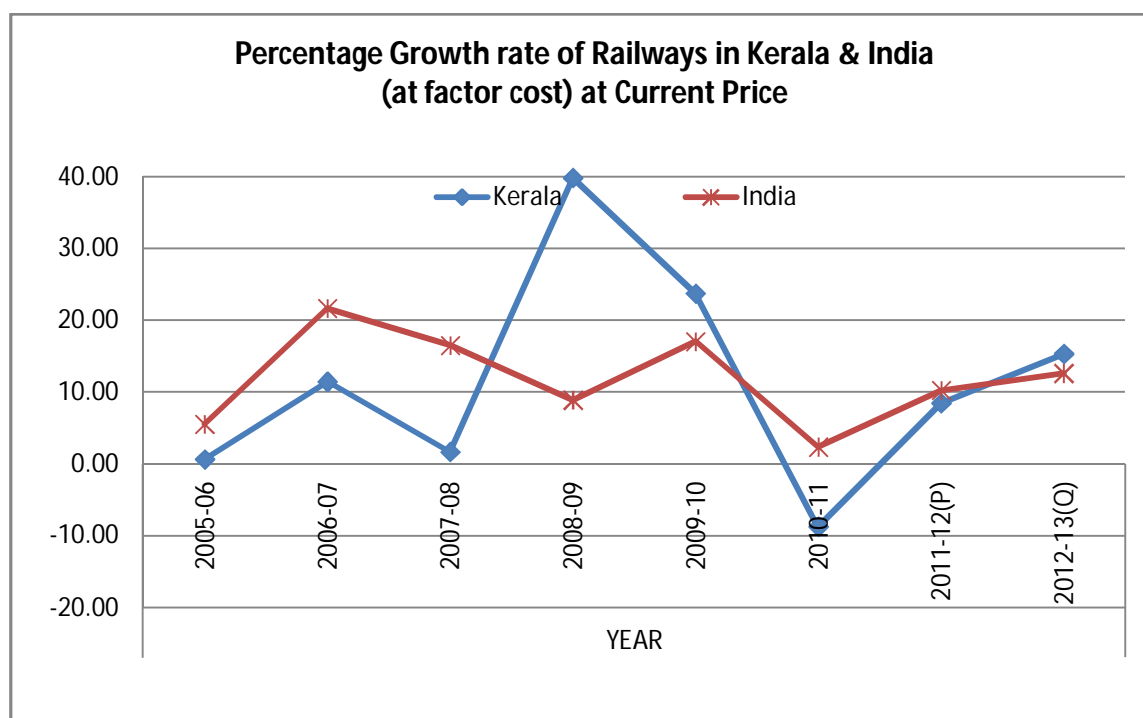

Estimates at constant prices are prepared by carrying forward the base year estimates with the combined indicator of passenger kilometers and net tone kilometers. The two physical indicators are combined using passenger earnings and goods earnings for the base year as weights.

Transport other than Railways

The economic activities covered in the sector are

(i) Road transport

- Mechanized road transport (NIC-98 codes- 6021+60221+60231);
- Non-mechanised road transport (NIC-98 codes – 60222+60232);

(ii) Water transport (NIC-98 code- 61);

(iii) Air transport (NIC-98 code- 62); and

(iv) Supporting and auxiliary transport activities (NIC-98 code – 63 – 6302).

The GVA estimate is prepared by multiplying the labour input (duly adjusted for public sector) with estimated Value Added Per Worker (VAPW) available from the results of Enterprise Survey, for the respective NIC codes, separately for organized (corporate sector) and unorganized segments.

Mechanized road transport:- The main economic activities covered under the mechanized road transport are transport by buses, transport by other vehicles; and transport by trucks. The GVA estimates of mechanized road transport are prepared in two parts i.e., organized (public) and unorganized. The current price GVA estimate of organized part is prepared by analyzing the annual accounts of Kerala State Road Transport Corporations. The constant price GVA is estimated by moving the base year GVA with quantum

index of passenger kilometers. The GVA of unorganized part for the year 2004-05 has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes.(duly adjusted for public sector). The constant price GVA for subsequent years is compiled as a product of base year labour input moved with index of registered vehicles and base year GVA per worker. The constant price GVA is inflated by Consumer Price Index (CPI) Industrial Worker (I W) to get current price GVA.

Non-mechanized road transport: - The non-mechanized road transport have been compiled for the base year as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes. The constant price estimates for subsequent years are prepared by moving the base year GVA with inter survey work force growth rate between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS.The current price GVA is estimated by inflating the constant price GVA with CPI for industrial workers.

(ii) **Water transport:**

The GVA estimates of water transport are prepared separately for organized (public and private) and unorganized segments.

Water transport (Organized public):

The base year GVA estimate of organized (public) part has been prepared at current prices by analyzing the water transport part of budget documents and annual accounts of Public Shipping Companies and Inland Water Shipping Companies. The constant price GVA is estimated by moving the base year GVA with Index of Cargo handled at major ports.

Water transport (Organized Private):

Current price GVA estimate of organized (private) part is prepared by analyzing the annual accounts of Private Shipping Companies. The constant price GVA with Index of Cargo handled at major ports.

Water transport (Un-organized):

The GVA estimates for unorganized sector have been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes (duly adjusted for public and private organized part). . For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey

average compound growth rate between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS. The current price GVA is estimated by inflating the constant price GVA with CPI Industrial worker.

(iii) Air transport:

The GVA estimates of air transport at current prices are prepared in two parts i.e. organized (public) and organized (private). Current price GVA estimates are prepared by analyzing the Air transport part of budget documents and annual accounts of Airlines (both public and private), flying and gliding clubs. The constant price GVA of public and private parts are estimated by moving the base year GVA with air transport volume index and combined index of passenger and cargo traffic handled in the airports respectively.

(iv) Supporting and auxiliary transport activities:

The GVA estimates of 'supporting and auxiliary transport activities' are prepared separately for organized (public) and unorganized parts.

Supporting and auxiliary transport activities (organized public):

The GVA estimate of organized part is prepared by analyzing the light houses and light ships part of the budget documents and annual accounts of companies engaged in services incidental to water and air transport like Port Trusts, Inland Water Authority, Dredging Corporation and Airport Authority of India. The GVA at constant prices is obtained by deflating the current price GVA with CPI of I W.

Supporting and auxiliary transport activities (un-organized):

The base year GVA estimate of Private corporate and Un-organised sector has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes. . For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey average compound growth rate between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS. The current price GVA is estimated by inflating the Constant price GVA with CPI Industrial worker.

Communication

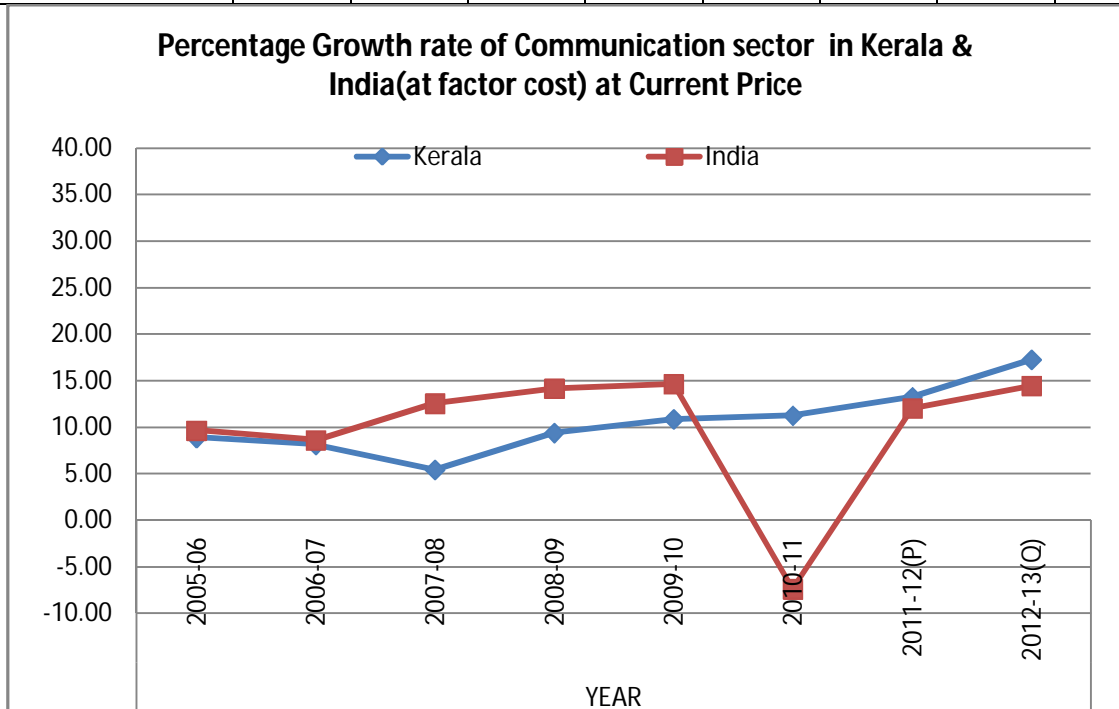

Estimates of GSDP for public part of Communication are considered as part of supra-regional sectors and the national level estimates are allocated to states by the CSO. The annual reports and accounts of the Indian Posts and Telecommunication Departments are analyzed and three sets of accounts, namely, the production account, the income and outlay account and the capital finance account are prepared. The GVA at current prices is obtained from the production account as the sum of compensation to employees and gross operating surplus. The estimates at constant prices are prepared by carrying forward the base year estimates with the help of combined weighted index of number of money orders, number of telephones and number of postal articles handled, weights being the corresponding gross earnings in the base year. The economic activities covered under (i) Courier activities (NIC-98, code-64120), (ii) Activities of the cable operators (NIC-98, code-64204) and (iii) Other communication (NIC-98, code-642-64204). The data sources are (i) Employment and Unemployment survey data from NSS 61st round and population census, 2001 estimates of work force (ii) Value added per worker from Enterprise Survey (iii) CPI of Agricultural Labour (AL) and CPI(IW) and (iv) Number of Cellular subscribers.

Storage

The economic activities covered in this sector are:

- Warehousing Corporations;
- Cold Storage: and
- Storage (not elsewhere classified)

The major data sources for preparing estimates for storage and warehousing sector are:

- The budget documents of Central and State Governments relating to storage and warehousing activities;
- Annual reports of Central and State Government enterprises relating to storage and warehousing corporations;
- Enterprise survey results of NSS 63rd round (2006-07);
- Labour Input estimates; and
- Annual survey of Industries (ASI results relating to cold storage)

Warehousing Corporations: The GVA estimate of warehousing corporations is based on the analysis of annual accounts of state and central warehousing corporations. The constant price estimates are prepared by deflating the current price estimates with storage index.

Cold Storage: The current price GVA estimate for the cold storage is based on the results available from Annual Survey of Industries (ASI). The constant price estimates are prepared by deflating the current price estimates with index of agriculture production.

Storage (n.e.c) : This is an unorganized part and the base year GVA has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001.

The GVA per worker of all types of storage category is obtained by subtracting the number of workers in public sector warehousing and cold storage covered under ASI from the total labour input estimates. For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey average compound growth rate observed between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS. The constant price GVA is inflated with CPI Industrial worker to get the current price estimates for subsequent year.

Trade, Hotels and Restaurants

The economic activities covered in this sector are

- (i) Wholesale and retail trade in all commodities both produced at home (including exports and imported),
- (ii) Purchase and selling agents, brokers and auctioneers,
- (iii) Services rendered by hotels and other lodging places, restaurants, cafes and other eating and drinking places.

The GDP estimates of both trade sector and hotels and restaurants sector are prepared separately for (a) Public part (b) Private organized part, consisting of Private corporate sector and Trading Co-operatives (applicable only for trade) and (c) Private Unorganized part.

The Trade Sector includes wholesale and retail trade in all commodities whether produced domestically, imported or exported. It covers activities of purchase and selling agents, brokers and auctioneers. Wholesale trade covers units, which resale without transformation, new and used goods generally to retailer and industries, commercial establishments, institutional and professional users or to other wholesalers. Retail trade covers units, which mainly resale without transformation new and used goods for personal or household consumption. This sector, now, also comprises of maintenance and repair of

motor vehicles and repair of personal household goods. As per NIC 1998 classification, this sector consists of following five categories:

- Maintenance and repair of motor vehicles (502+50404)
- Sale of motor vehicles (50-502-50404)
- Whole sale trade except of motor vehicles + Auctioning activities (51+74991)
- Repair of personal household goods (526) and
- Retail trade (except motor vehicles) (52-526)

Current price estimates of GVA in respect of public sector are based on annual budget documents and annual report of trading enterprises. In the case of private corporate sector and the co-operatives the estimates are based on sample studies undertaken by the Reserve Bank of India (RBI) and annual report of the National Bank for Agriculture and Rural Development (NABARD) respectively. For the remaining unorganised part of trading activity, estimates for the base year are based on the results of surveys conducted by the NSSO. For other years, estimates in respect of unorganised trade and hotels are compiled by extrapolating the base year estimates with the help of a specially compiled Gross Trading Index (GTI). The GTI is compiled for the commodity producing sectors and imports on the basis of value of output and commodity-wise marketable surplus ratios and trade margins, separately at current and constant prices.

The hotels and restaurants sector covers services rendered by hotels and other lodging places, restaurants, cafes and other eating and drinking places. As per the NIC 1998 classification, it consists of following two categories

- Hotels, camping sites etc (NIC 98 code-551) and
- Restaurants, bars and canteens (NIC 98 code-552)

Current price estimates of GVA in respect of public sector units engaged in hotels and restaurants are based on the analysis of annual budget documents and budget documents. In the case of private organized sector the estimates are based on sample studies undertaken by the Reserve Bank of India (RBI). For the remaining private unorganized part, estimates for the base year are based on the value added per worker from enterprise survey and labour input estimates from Employment-Unemployment Survey. For other years, estimates in respect of un-organised hotels and restaurants are compiled by extrapolating the base year estimates with the help of a specially compiled GTI. The GTI is compiled for the commodity producing sectors and imports on the basis of value of output and commodity-wise marketable surplus ratios and trade margins, separately at current and constant prices.

Banking and Insurance

The main activities covered under this sector are banking and insurance which comprises of:

- Commercial banks;
- Banking department of RBI;
- Public non-banking financial corporations;
- Organised non-banking financial companies engaged in trading in shares, investment holdings, mutual funds, loan finance and the like activities;
- Unorganised non-banking financial institutions/undertakings such as professional money lenders and pawn brokers;

- Post office savings banks including operations concerning cumulative time deposits and national saving certificates;
- Co-operative credit societies; and
- Life and non-life insurance activities.

Under the NIC 1998, this sector consists of codes 651-Monetary Intermediation, 659-Other financial intermediation, 660-Insurance and pension funding, except compulsory social security, 671-Activities auxiliary to financial intermediation, except insurance and pension funding, and 672-Activities auxiliary to insurance and pension funding. Estimates of GSDP for banking and insurance are considered as part of supra-regional sectors and the national level estimates are allocated to states by the CSO. Annual Reports/Accounts of the Public Sector Banks, Companies and Corporations like Life Insurance Corporation (LIC), State Financial Corporations etc. are major sources of data. The budget documents of Department of Posts provide the necessary data in the case of post office savings and postal life insurance.

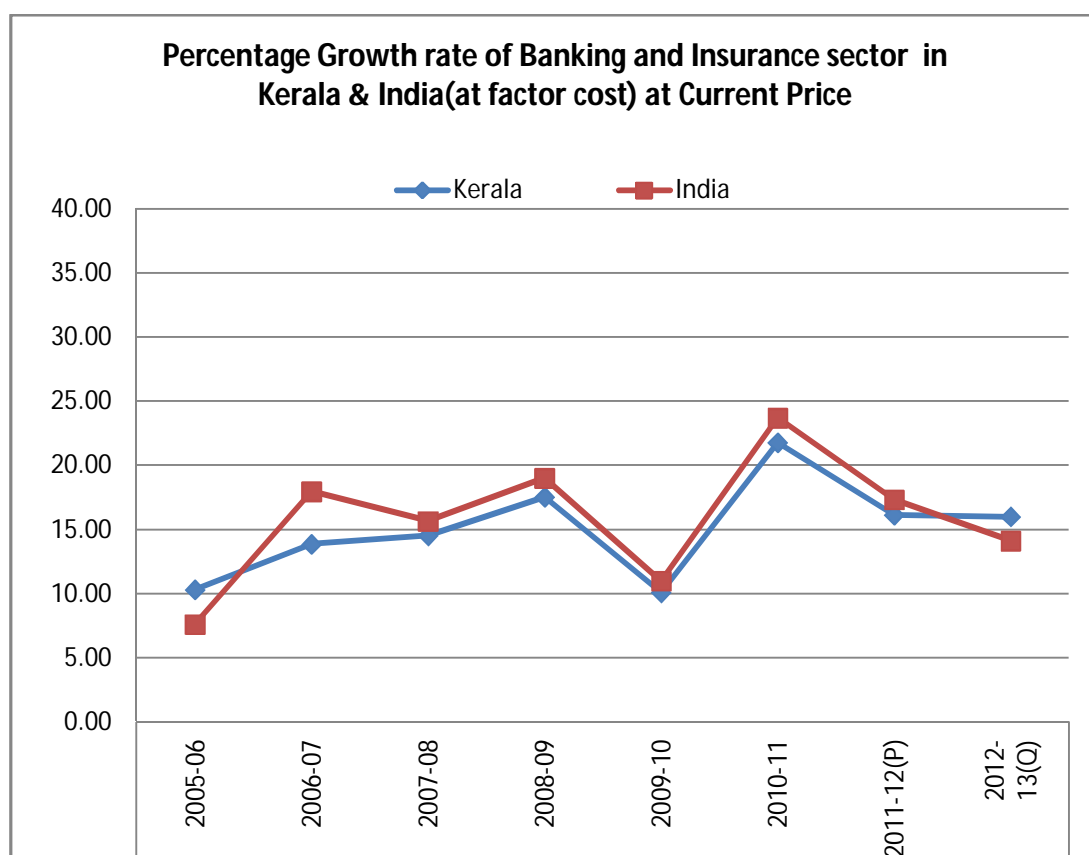

Banks: The gross output of banks and similar financial institutions is estimated in two components viz., actual service charges and the imputed service charges. The GDP from this sector is estimated by income method using readily available source material for each of the sub-sectors. Detailed data are available from the annual reports of the RBI, Non-banking financial companies and corporations and also the Life Insurance and General Insurance Corporations. In respect of post office savings banks and postal life insurance, data are available from the annual budget documents of the central government. Data in respect of co-operative credit societies are available from the NABARD. Estimates at constant price are arrived at by using suitable quantum indices in each case.

Real Estate, Ownership of Dwellings and Business Services

The estimates of real estate, legal services and business services (except software development) are prepared using labour input and value added per worker approach. The estimates of software development activities are prepared using National Association of Software and Service Companies (NASSCOM) data of output from these services and GVA to GVO ratio obtained from the annual reports of the various companies engaged in software development activities. For ownership of dwellings the methodology consists of estimating the gross rental of residential buildings (including owner occupied) and deducting there from the cost of repairs and maintenance to obtain the estimates of GVA.

Real Estate Activities (NIC-98, code 70):

These includes buying, selling, renting and operating of self-owned or leased real estate such as apartment building and dwelling, non-residential buildings, developing and subdividing real estates into lots etc. It also included developments and sale of land and cemetery lots, operating of apartment hotels and residential mobile home sites, development on own account involving construction classified in class 4520 of NIC 1998. Purchase, sale, letting and operating of real estate – residential and non-residential buildings, developing and subdividing real estate in to lots, leasers of real property, real estate activities with own or leased property not elsewhere classified (n.e.c.), real estate activities, on a fee or contract basis are the activities included in it. Further activities relating to buying, selling, renting, managing and appraising real

estate on a fee or contract basis are also included. The estimates of Value added for the base year (2004-05) have been prepared using the estimates of VAPW from NSS 63rd round and the estimated workforce of NSS 61st round separately for rural / urban / private corporate and unorganised sectors.

Ownership of Building:

In the production boundary of national accounts only two categories of services produced by households for own final consumption are included, namely,

(a) Services of owner – occupied dwellings;

Owner-occupies are deemed to own household unincorporated enterprises that produce housing services for their own consumption; and

(b) Domestic services produced by employing paid staff;

Households are deemed to own household unincorporated enterprises in which they employ paid staff like servants, cooks, gardeners, etc. to produce services for their own consumption.

Business Services:

Renting of machinery and equipment without operator (NIC-98 code 71);

The activities covered under this compilation categories are; renting of machinery and equipment without operator and personal and household goods. The estimates of GVA for these activities for the year 1999-2000 have been compiled by using labour input method. The VAPW of rural / urban areas of Enterprise survey, 2006-07 of NSS 63rd Round and labour input estimates based on EUS 2004-05 of the 61st round have been used to prepare the GVA estimates for the base year. For subsequent years, the estimates of labour input have been prepared using the population growth rate as projected by the Office of the Registrar General of India (RGI). The value added per worker of rural and urban areas are projected to subsequent years using CPI (AL) and CPI (IW) respectively.

Computer and related activities in Private Sector (NIC-98 code 72) :

The activities covered under this compilation category are hardware consultancy, software consultancy and supply, data processing, database activities, maintenance and repair of office/accounting/computing machinery and other computer related activities. The estimates of Value added for the base year (2004-05) have been prepared using the estimates of VAPW from NSS 63rd round and the estimated workforce of NSS 61st round for the unorganised sector and the latest NASSCOM's data for the private corporate sector. The value added per worker of rural and urban areas are projected to subsequent years with the CPI (AL) and CPI (IW) respectively.

Legal activities (NIC 98 Code 7411):

This compilation category includes legal services such as those rendered by advocates, barristers, solicitors, pleaders, mukthiars etc (law court activities are classified in class 7523 of NIC 1998). The estimates of GVA

for legal services for the base year 1999-2000 have been prepared by using the labour input method based on VAPW estimates of NSS enterprises survey of 2006-07 and labour input estimates based on EUS 2004-05 of NSS 61st Round, worked out separately for rural/urban and organized/un-organized segments.

Accounting, Book Keeping and Related activities in Private Sector (NIC-98 code 7412):

The activities covered under this compilation category are accounting, book keeping and auditing activities and tax consultancy services. The estimates of GVA for accounting and book keeping services etc., in the private sector for the base year 1999-2000 have been prepared by using the labour input method based on GVAPW estimates of NSS Enterprise survey of 2001-02 and labour input estimates based on EUS 2004-05 of NSS 61st Round, worked out separately for rural and urban areas.

Research and development (NIC-98 codes 73,7413,7414,742,743, 74991)

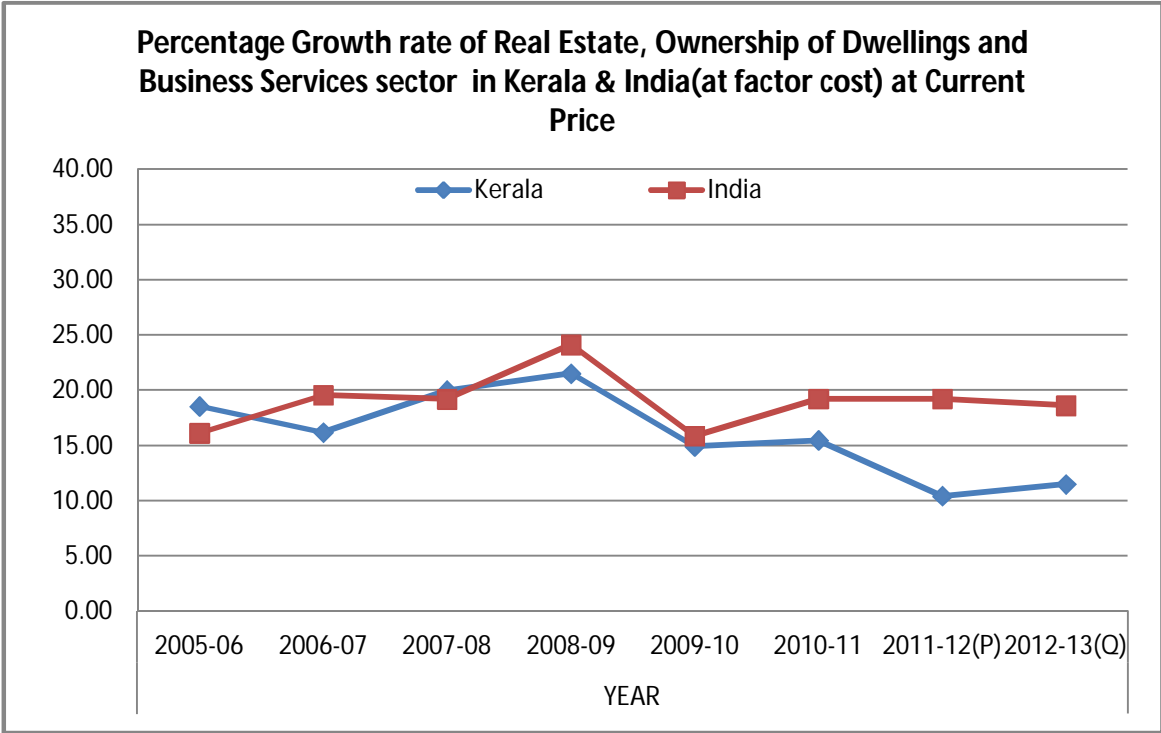

This compilation category has been obtained by re-grouping the activities under business services and other services. In the 1993-94 series, the estimates of Research and Scientific services (NIC-87 code 922) were included under 'other services'. In NIC-98, this activity is classified under code 73, which is under 'business services'. In 1999-2000 series of NAS, the estimates of this activity are included under 'business services' only. Similarly, the GVA estimates of 'press agency activities' falling under NIC-87 code 897 were being compiled, though not exclusively, under the category of 'business services' in 1993-94 series. Now this activity falls under 'news agency activities' which is classified under NIC-98 code 922. The GVA estimates from this category are included under 'other services' in the new series. Thus the comparison of GVA estimates of 'business services' in the 1993-94 series, and 1999-2000 series, has to be done keeping in view these changes in grouping. The estimates of GVA for these services in the new series for the year 2004-05 have been prepared by using the data on workforce and VAPW from the results of 61st round and NSS 63rd rounds, respectively, also separately for rural / urban/private corporate/un-organised sectors. The values added per worker of rural and urban areas have been projected to subsequent years with CPI (AL) and CPI (IW) respectively.

Public Administration and Defence

Public administration and defence (NIC 1998 code 75) covers services rendered by the general government i.e., Central and State governments, Corporations, Municipalities, District Panchayath, Block Panchayath and Grama Panchayat. Public services in quasi government bodies are also included under these economic activities. These services relate to the organs of state dealing with collection of taxes, other fiscal services, interest payments and servicing of debts, defence services administrative services (such as external affairs, police, jails, supplies and disposal, pensions), social and community services (viz., social security, welfare and relief on account of natural calamities) and economic services (e.g. agriculture, animal husbandry, industries and community development). The activities of the Issue department of the RBI and Employees Provident Fund Organization (EPFO) are like that of administrative departments and therefore these activities are also included. However, economic services like irrigation, forestry etc., are included under respective industry groups. Thus an irrigation system comes under agriculture and construction activity undertaken by government under 'construction'. Education and medical & health services are under 'other services' industry groups. The departmental commercial enterprises of government such as railways, postal and communications, overseas communication services, forests, road transport, power projects, distilleries, television and radio broadcasting, milk supply schemes, manufacturing industries including defence manufacturing establishments and government printing presses are included in the appropriate industry groups.

For the estimation of GVA normally, goods and services produced for own final consumption or own capital formations are valued on the basis of prices of similar goods and services produced by market producers. However, in the case of general government, which is engaged in non-market production, its output cannot be valued with these imputation procedures, as suitable prices for similar services produced by the market producers are not available. For these reasons, and also to ensure that the various non-market services produced by government units and NPISHs are valued consistently with each other, the SNA recommends that they are all valued by the sum of costs incurred in their production, namely, as the sum of:

- Intermediate consumption;
- Compensation of employees;
- Consumption of fixed capital; and
- Other taxes, less subsidies; on

Annual estimates of NVA, which comprises only the compensation of employees, are compiled from the government budget documents. The CFC estimated separately is added to NVA to

arrive at GVA estimates. Estimates of GVA at constant prices are compiled by deflating the current price NVA by CPI (IW) and adding to it the CFC at constant prices.

Other Services

The economic activities covered under this sector are (i) Coaching and Tuition (NIC-98 codes 80903 and 80904), (ii) Education excluding Coaching and Tuition (NIC-98 code 80(-)80903 and (-) 80904, (iii) Human health activities including veterinary activities, (iv) Sewage and refuse disposal, Sanitation activities (NIC-98 code 90) , (v) Activities of membership organizations (+) social work, (NIC-98, code 91+853) , (vi) Recreational cultural and sporting activities (NIC-98 code 92), (vii) Washing and cleaning of textiles and fur products (NIC-98 code 9301), (viii) Hair dressing and other beauty treatments (NIC-98 code 9302), (ix) Funeral related activities (NIC-98 code 9303+9309) , (x) Private households with employed persons (NIC -98 code 95), (xi) Custom tailoring (NIC-98 code 18105), and (xii) Extra territorial organizations and bodies (NIC-98 code 99)

The sources of data are: (i) Employment and Unemployment survey data of NSS 61st Round and population Census 2001 estimates of work force; (ii) Value added per worker from enterprise survey, NSS 63rd Round; (iii) Budget documents for data relating to activities of these services covered under Government; (iv) Annual report/Accounts of corporations; and (v) Consumer price index for agriculture labour - CPI(AL), Consumer Price Index for Industrial workers - CPI(IW)

All the activities are broadly grouped under three segments, namely, public sector, private organized sector, and private unorganized sector. While the estimates of GVA in respect of activities covered under public sector are compiled by analyzing the budget documents and annual accounts of the concerned units, those of private organized and private unorganized segments are prepared following the labour input method and benchmark-indicator procedures.

Generally, the GVA estimates for non-public sector segments are prepared separately for organized segments. Initially estimates are prepared for a benchmark year (usually the base of current national series), and for subsequent years, the benchmark year's GVA estimates are extrapolated with suitable indicators. The benchmark year GVA estimates are prepared as a product of estimated workforce engaged in the economic activity and the estimated value added per worker (VAPW), separately for organized and unorganized segments. For the current NAS series (base year 1999-2000), the workforce estimates are from the NSS 61st round (2004-05) survey results, and the estimates of VAPW are from the results NSS 63rd round (2005-06). The GVA estimates for the base year have been prepared separately for rural/urban areas and also separately for organized/unorganized segments. It may be mentioned that the NSS 63rd round survey results provide the data separately for corporate sector and unorganized sector. For subsequent years, the estimates of workforce in the respective activities have been prepared using the inter survey average compound growth rate of quinquennial Employment & Unemployment surveys as observed between 1999-2000 and 2004-05 of NSS

55th and NSS 61st round survey results. The value added per worker of rural/ urban areas and organized/unorganized segments have been projected to subsequent years with the CPI (AL) and CPI (IW) respectively. The GVA estimates have then be compiled as product of workforce and VAPW for the respective rural/urban and organized/unorganized segments

GLOSSARY OF TERMS

Assets	Assets are entities that must be owned by some unit, or units, and from which economic benefits are derived by their owner(s) by holding or using them over a period of time.
Base period	The period that provides the weights for an index is described as the base period.
Basic price	The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable, and plus any subsidy receivable, on that unit as a consequence of its production or sale; it excludes any transport charges invoiced separately by the producer.
Capital stock - gross	Gross capital stock is the value of all fixed assets still in use at the end of an accounting period, at the actual or estimated current purchasers' prices for new assets of the same type, irrespective of the age of the assets.
Capital stock - net	The sum of the written-down values of all the fixed assets still in use at the end of an accounting period is described as the net capital stock.
Changes in inventories (including work-in-progress)	Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.
Classification of individual consumption by purpose (COICOP)	The classification of individual consumption by purpose (COICOP) is a classification used to identify the objectives of both individual consumption expenditure and actual individual consumption.
Classification of the functions of government (COFOG)	The classification of the functions of government (COFOG) is a classification used to identify the socio-economic objectives of current transactions, capital outlays and acquisition of financial assets by general government and its sub-sectors.
Compensation of employees	Compensation of employees is the total remuneration, in cash or in kind, payable by enterprises to employees in return for work done by the latter during the accounting period.
Computer software	Computer software consists of computer programs, program descriptions and supporting materials for both systems and applications software.
Constant prices	Constant prices are obtained by directly factoring changes over time in the values of flows of goods and services into two components reflecting changes in the prices of the goods and services concerned and changes in their volumes (i.e. changes in "constant price terms").
Consumption	Consumption is an activity in which institutional units use up goods or services; consumption can be either intermediate or final.
Consumption of fixed capital	Consumption of fixed capital represents the reduction in the value of the fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or normal accidental damage.

Cultivated assets	Cultivated assets are livestock for breeding (including fish and poultry), dairy, draught, etc. and vineyards, orchards and other plantations of trees yielding repeat products that are under the direct control, responsibility and management of institutional units.
Defined benefit pension plans	Defined benefit pension plans are those in which the level of pension benefits promised to participating employees is guaranteed; benefits are related by some formula to participants' length of service and salary and are not totally dependent on either the participants' contributions or the assets in the fund.
Depletion of natural economic assets	The depletion of natural economic assets is the reduction in the value of deposits of subsoil assets, natural forests, fish stocks in the open seas and other non-cultivated biological resources as a result of the physical removal and using up of the assets.
Depreciation	Depreciation as usually calculated in business accounts is a method of allocating the costs of past expenditures on fixed assets over subsequent accounting periods; note that the depreciation methods favored in business accounting and those prescribed by tax authorities almost invariably deviate from the concept of consumption of fixed capital employed in the SNA and so the term "consumption of fixed capital" is used in the SNA to distinguish it from "depreciation" as typically measured in business accounts.
Disposable income	Disposable income is derived from the balance of primary incomes of an institutional unit or sector by adding all current transfers, except social transfers in kind, receivable by that unit or sector and subtracting all current transfers, except social transfers in kind, payable by that unit or sector.
Disposals	Disposals of assets (inventories, fixed assets or land or other non-produced assets) by institutional units occur when one of those units sells any of the assets to another institutional unit.
Domestic output	Domestic output is output produced by resident enterprises.
Double deflation	Double deflation is a method whereby gross value added is measured at constant prices by subtracting intermediate consumption at constant prices from output at constant prices; this method is feasible only for constant price estimates which are additive, such as those calculated using a Laspeyres' formula (either fixed-base or for estimates expressed in the previous year's prices).
Durable good	A durable good is one which may be used repeatedly or continuously over a period of more than a year, assuming a normal or average rate of physical usage.
Dwellings	Dwellings are buildings that are used entirely or primarily as residences, including any associated structures, such as garages, and all permanent fixtures customarily installed in residences; movable structures, such as caravans, used as principal residences of households are included.
Entertainment, literary or artistic originals	Entertainment, literary or artistic originals are the original films, sound recordings, manuscripts, tapes, models, etc, on which drama performances, radio and television programming, musical performances, sporting events, literary and artistic output, etc, are recorded or embodied.
Establishment	An establishment is an enterprise or part of an enterprise that is situated in a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.
Expenditures	Expenditures are the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

Exports of goods	Exports of goods consist of exports of the following items from residents to non-residents, generally with a change of ownership being involved: general merchandise, goods for processing, goods procured in domestic ports by non-resident carriers, and non-monetary gold.
Exports of services	Exports of services consist of the following services provided by residents to non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.
Factor cost	Gross value added at factor cost is not a concept used explicitly in the System but it can easily be derived by subtracting the value of any taxes, less subsidies, on production payable out of gross value added.
Final consumption	Final consumption consists of goods and services used up by individual households or the community to satisfy their individual or collective needs or wants.
Final consumption expenditure of government	Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.
Final consumption expenditure of households	Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant.
Final consumption expenditure of NPISHs	Final consumption expenditure of NPISHs consists of the expenditure, including imputed expenditure, incurred by resident NPISHs on individual consumption goods and services.
Financial auxiliaries	The financial auxiliaries sub-sector consists of all resident corporations and quasi-corporations engaged primarily in activities closely related to financial intermediation but which do not themselves perform an intermediation role.
Financial corporations	The financial corporations sector consists of all resident corporations or quasi-corporations principally engaged in financial intermediation or in auxiliary financial activities which are closely related to financial intermediation.
Financial enterprises	Financial enterprises are enterprises that are principally engaged in financial intermediation or in auxiliary financial activities which are closely related to financial intermediation.
Financial intermediaries	Financial intermediaries are units which incur liabilities on their own account on financial markets by borrowing funds which they lend on different terms and conditions to other institutional units.
Financial intermediation	Financial intermediation is a productive activity in which an institutional unit incurs liabilities on its own account for the purpose of acquiring financial assets by engaging in financial transactions on the market.
Financial intermediation services indirectly measured (FISIM)	Financial intermediation services indirectly measured (FISIM) is an indirect measure of the value of financial intermediation services provided but for which financial institutions do not charge explicitly.
Fixed assets	Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly or continuously in other processes of production for more than one year.

Foreign direct investment	Foreign direct investment is the category of international investment that reflects the objective of a resident entity in one economy to obtain a lasting interest in an enterprise resident in another economy; foreign direct investment is defined as ownership of 10 per cent or more of the ordinary shares or voting power (for an incorporated enterprise) or the equivalent (for an unincorporated enterprise).
Functional classifications	Functional classifications provide a means of classifying, by purpose or socio-economic objective, certain transactions of producers and of three institutional sectors - namely households, general government and non-profit institutions serving households (NPISH)s.
GDP - expenditure based	Expenditure-based GDP is total final expenditures at purchasers' prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.
GDP - income based	Income-based GDP is compensation of employees, plus taxes less subsidies on production and imports, plus gross mixed income, plus gross operating surplus.
GDP - output based	Output-based GDP is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).
GDP at market prices	GDP at market prices is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).
GNI (gross national income)	GNI (gross national income) is GDP less net taxes on production and imports, less compensation of employees less property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units); an alternative approach to measuring GNI at market prices is as the aggregate value of the balances of gross primary incomes for all sectors; (note that GNI is identical to gross national product (GNP) as previously used in national accounts generally).
Goods	Goods are physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets.
Goods and services account	The goods and services account shows for the economy as a whole and for groups of products, the total resources in terms of output and imports, and the uses of goods and services in terms of intermediate consumption, final consumption, gross capital formation and exports.
Government final consumption expenditure	Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.
Gross	The term "gross" is a common means of referring to values before deducting consumption of fixed capital (generally used as in "gross capital stock" or "gross domestic product").
Gross capital formation	Gross capital formation is measured by the total value of the gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables for a unit or sector.

Gross fixed capital formation	Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units.
Gross national disposable income	Gross national disposable income may be derived from gross national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.
Gross saving	Gross saving is gross disposable income less final consumption expenditure.
Gross value added	Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.
Gross value added at basic prices	Gross value added at basic prices is output valued at basic prices less intermediate consumption valued at purchasers' prices.
Gross value added at producers' prices	Gross value added at producers' prices is output valued at producers' prices less intermediate consumption valued at purchasers' prices.
Historic cost accounting	Historic cost accounting is a valuation method which requires goods or assets used in production to be valued by the expenditures actually incurred to acquire those goods or assets, however far back in the past those expenditures took place.
Holding gains	Positive or negative holding gains may accrue during the accounting period to the owners of financial and non-financial assets and liabilities as a result of a change in their prices (holding gains are sometimes referred to as "capital gains").
Household final consumption expenditure	Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant.
Illegal production	Illegal production is the production of goods or services whose sale, distribution or possession is forbidden by law; and production activities which are usually legal but which become illegal when carried out by unauthorised producers; the scope of illegal production varies depending on the laws in place in individual countries (eg, prostitution is legal in some countries but illegal in others).
Income	Income is the maximum amount that a household, or other unit, can consume without reducing its real net worth.
Income from abroad - net	Net income from abroad is the difference between the total values of the primary incomes receivable from, and payable to, non-residents.
Industry	An industry consists of a group of establishments engaged on the same, or similar, kinds of production activity; the classification of productive activities used in the System is ISIC (Rev.3).
Institutional sectors	Institutional units are grouped together to form institutional sectors, on the basis of their principal functions, behaviour, and objectives.
Institutional unit	An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and in transactions with other entities.

Insurance	The activity of insurance is intended to provide individual institutional units exposed to certain risks with financial protection against the consequences of the occurrence of specified events; it is also a form of financial intermediation in which funds are collected from policyholders and invested in financial or other assets which are held as technical reserves to meet future claims arising from the occurrence of the events specified in the insurance policies.
Insurance corporations	Insurance corporations consist of incorporated, mutual and other entities whose principal function is to provide life, accident, sickness, fire or other forms of insurance to individual institutional units or groups of units.
Insurance technical reserves	The technical reserves held by insurance enterprises consist of the actuarial reserves against outstanding risks in respect of life insurance policies, including reserves for with-profit policies which add to the value on maturity of with-profit endowments or similar policies, prepayments of premiums and reserves against outstanding claims.
Intangible fixed assets	Intangible fixed assets are non-financial produced fixed assets that mainly consist of mineral exploration, computer software, entertainment, literary or artistic originals intended to be used for more than one year.
Intangible non-produced assets	Intangible non-produced assets are assets that entitle their owners to engage in certain specific activities or to produce certain specific goods or services and to exclude other institutional units from doing so except with the permission of the owner (eg, patented entities or purchased goodwill).
Integrated economic accounts	The integrated economic accounts comprise the full set of accounts of institutional sectors and the rest of the world, together with the accounts for transactions (and other flows) and the accounts for assets and liabilities.
Interest	Interest is the amount that the debtor becomes liable to pay to the creditor over a given period of time without reducing the amount of principal outstanding, under the terms of the financial instrument agreed between them.
Intermediate consumption	Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets whose consumption is recorded as consumption of fixed capital; the goods or services may be either transformed or used up by the production process.
Inventories	Inventories consist of stocks of outputs that are still held by the units that produced them prior to their being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units that are intended to be used for intermediate consumption or for resale without further processing.
Inventories - changes in (including work-in-progress)	Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.
Inventories of work-in-progress on cultivated assets	Inventories of work-in-progress on cultivated assets consist of livestock raised for products yielded only on slaughter, such as fowl and fish raised commercially, trees and other vegetation yielding once-only products on destruction and immature cultivated assets yielding repeat products.
ISIC	ISIC is the United Nations International Standard Industrial Classification of All Economic Activities; the third revision of ISIC is used in the 1993 SNA.
Kind-of-activity unit	A kind-of-activity unit is an enterprise, or a part of an enterprise, which engages in only one kind of (non-ancillary) productive activity or in which the principal productive activity accounts for most of the value added.

Land	Land is the ground, including the soil covering and any associated surface waters, over which ownership rights are enforced.
Machinery and equipment (assets)	Machinery and equipment (assets) consist of transport equipment and other machinery and equipment other than that acquired by households for final consumption.
Maintenance and repairs (of fixed assets)	Ordinary maintenance and repairs of fixed assets are activities that owners or users of fixed assets are obliged to undertake periodically in order to be able to utilise assets over their expected service lives (they are current costs that cannot be avoided if the fixed assets are to continue to be used); maintenance and repairs do not change the fixed asset or its performance, but simply maintain it in good working order or restore it to its previous condition in the event of a breakdown (note the contrast between this item and “major renovations or enlargements”).
Major renovations or enlargements (of fixed assets)	Major renovations or enlargements of fixed assets are activities which increase the performance or capacity of existing fixed assets or significantly extend their previously expected service lives; the decision to renovate, reconstruct or enlarge a fixed asset is a deliberate investment decision which may be undertaken at any time and is not dictated by the condition of the asset (note the contrast between this item and “maintenance and repairs”).
Margin (trade)	A trade margin is the difference between the actual or imputed price realised on a good purchased for resale (either wholesale or retail) and the price that would have to be paid by the distributor to replace the good at the time it is sold or otherwise disposed of.
Margin (transport)	A transport margin consists of those transport charges paid separately by the purchaser in taking delivery of the goods at the required time and place.
Market output	Market output is output that is sold at prices that are economically significant or otherwise disposed of on the market, or intended for sale or disposal on the market.
Market prices	Market prices for transactions are the amounts of money willing buyers pay to acquire something from willing sellers.
Mineral exploration	Mineral exploration consists of the value of expenditures on exploration for petroleum and natural gas and for non-petroleum deposits.
Mixed income	Mixed income is the surplus or deficit accruing from production by unincorporated enterprises owned by households; it implicitly contains an element of remuneration for work done by the owner, or other members of the household, that cannot be separately identified from the return to the owner as entrepreneur but it excludes the operating surplus coming from owner-occupied dwellings.
Monetary gold	Monetary gold is gold owned by the monetary authorities or others subject to their effective control that is held as a financial asset and as a component of foreign reserves.
National income	National income is the total value of the primary incomes receivable within an economy less the total of the primary incomes payable by resident units.
Net	The term “net” is a common means of referring to values after deducting consumption of fixed capital (generally used as in “net capital stock” or “net domestic product”); it should be noted, however, that the term “net” can be used in different contexts in the national accounts, such as “net income from abroad” which is the difference between two income flows.
Net domestic product (NDP)	Net domestic product (NDP) is obtained by deducting the consumption of fixed capital from gross domestic product.

Net fixed capital formation.	Net fixed capital formation consists of gross fixed capital formation less consumption of fixed capital.
Net income from abroad	The difference between the total values of the primary incomes receivable from, and payable to, non-residents is often described as net income from abroad.
Net national income	The aggregate value of the balances of net primary incomes summed over all sectors is described as net national income.
Net saving	Net saving is net disposable income less final consumption expenditure.
Net value added	Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.
Net worth	Net worth is the value of all the non-financial and financial assets owned by an institutional unit or sector less the value of all its outstanding liabilities; it is a measure of the wealth of a unit or sector at a point in time.
Non-financial assets	Non-financial assets are entities, over which ownership rights are enforced by institutional units, individually or collectively, and from which economic benefits may be derived by their owners by holding them, or using them over a period of time, that consist of tangible assets, both produced and non-produced, and most intangible assets for which no corresponding liabilities are recorded.
Non-financial corporations	Non-financial corporations are corporations whose principal activity is the production of market goods or non-financial services.
Non-financial quasi-corporations	Non-financial quasi-corporations are quasi-corporations whose principal activity is the production of market goods or non-financial services.
Non-life insurance premiums	Non-life insurance premiums comprise both the actual premiums payable by policyholders to obtain insurance cover during the accounting period (premiums earned) and the premium supplements payable out of the property income attributed to insurance policyholders, but excluding social contributions.
Non-market producers	Non-market producers are producers that provide most of their output to others free or at prices which are not economically significant.
Non-profit institutions (NPIs)	Non-profit institutions (NPIs) are legal or social entities created for the purpose of producing goods and services whose status does not permit them to be a source of income, profit or other financial gain for the units that establish, control or finance them.
Non-profit institutions controlled and mainly financed by government	Non-profit institutions controlled and mainly financed by government are properly constituted legal entities which exist separately from government but which are financed mainly by government and over which government exercises control.
Non-profit institutions engaged in market production	Non-profit institutions engaged in market production consist of those NPIs which charge fees determined by their costs of production and which are sufficiently high to have a significant influence on the demand for their services, but any surpluses such institutions make must be retained within those institutions as their status as "Non-profit institutions (NPIs)" prevents them from distributing them to others
Non-profit institutions engaged in non-market production	Non-profit institutions engaged in non-market production are NPIs that are incapable of providing financial gain to the units which control or manage them, and which must rely principally on funds other than receipts from sales to cover their costs of production or other activities.

Non-profit institutions serving households (NPISHs)	Non-profit institutions serving households (NPISHs) consist of NPIs which are not financed and controlled by government and which provide goods or services to households free or at prices that are not economically significant.
Non-residential buildings	Non-residential buildings are buildings other than dwellings, including fixtures, facilities and equipment that are integral parts of the structures and costs of site clearance and preparation.
Operating surplus	The operating surplus measures the surplus or deficit accruing from production before taking account of any interest, rent or similar charges payable on financial or tangible non-produced assets borrowed or rented by the enterprise, or any interest, rent or similar receipts receivable on financial or tangible non-produced assets owned by the enterprise; (note: for unincorporated enterprises owned by households, this component is called "mixed income").
Output	Output consists of those goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.
Perpetual inventory method (PIM)	The perpetual inventory method (PIM) is a method of constructing estimates of capital stock and consumption of fixed capital from time series of gross fixed capital formation; it allows an estimate to be made of the stock of fixed assets in existence and in the hands of producers which is generally based on estimating how many of the fixed assets installed as a result of gross fixed capital formation undertaken in previous years have survived to the current period.
PPP (purchasing power parity)	A PPP (purchasing power parity) is a price relative which measures the number of units of country B's currency that are needed in country B to purchase the same quantity of an individual good or service as 1 unit of country A's currency will purchase in country A.
Primary incomes	Primary incomes are incomes that accrue to institutional units as a consequence of their involvement in processes of production or ownership of assets that may be needed for purposes of production.
Produced assets	Produced assets are non-financial assets that have come into existence as outputs from processes that fall within the production boundary of the SNA.
Producer's price	The producer's price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser; it excludes any transport charges invoiced separately by the producer.
Production	Production is an activity, carried out under the responsibility, control and management of an institutional unit, that uses inputs of labour, capital and goods and services to produce outputs of other goods and services.
Production account	The production account records the activity of producing goods and services as defined within the SNA; its balancing item, gross value added, is a measure of the contribution to GDP made by an individual producer, industry or sector.
Production boundary	The production boundary includes all production actually destined for the market, whether for sale or barter, all goods or services provided free to individual households or collectively to the community by government units or NPISHs, all goods produced for own final use, own-account production of housing services by owner occupiers and services produced by employing paid domestic staff.

Property income	Property income is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds to or putting the tangible non-produced asset at the disposal of, another institutional unit; it consists of interest, the distributed income of corporations (ie, dividends and withdrawals from income of quasi-corporations), reinvested earnings on direct foreign investment, property income attributed to insurance policy holders, and rent.
Property income attributed to insurance policyholders	The property income attributed to insurance policyholders is the investment income receivable by insurance enterprises on insurance technical reserves; it is shown in the accounts as being paid by the insurance enterprises to the insurance policyholders because the technical reserves are assets of the policyholders.
Purchaser's price	The purchaser's price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser; the purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.
Quasi-corporations	Quasi-corporations are unincorporated enterprises that function as if they were corporations, and which have complete sets of accounts, including balance sheets.
Reference rate (of interest)	The reference rate (of interest) is the pure cost of borrowing funds (i.e. a rate from which the risk premium has been eliminated to the greatest extent possible and which does not include any intermediation services).
Reinvested earnings on direct foreign investment	Reinvested earnings on direct foreign investment consist of the retained earnings of a direct foreign investment enterprise and which are treated as if they were distributed and remitted to foreign direct investors in proportion to their ownership of the equity of the enterprise and then reinvested by them in the enterprise.
Rent	Rent is the sum of rents on land and rents on subsoil assets.
Research and development	Research and development by a market producer is an activity undertaken for the purpose of discovering or developing new products, including improved versions or qualities of existing products, or discovering or developing new or more efficient processes of production.
SAM (social accounting matrix)	A SAM (social accounting matrix) is a means of presenting the SNA accounts in a matrix which elaborates the linkages between a supply and use table and institutional sector accounts; a typical focus of a SAM on the role of people in the economy may be reflected by, among other things, extra breakdowns of the household sector and a disaggregated representation of labour markets (i.e., distinguishing various categories of employed persons).
Satellite accounts	Satellite accounts provide a framework linked to the central accounts and which enables attention to be focussed on a certain field or aspect of economic and social life in the context of national accounts; common examples are satellite accounts for the environment, or tourism, or unpaid household work.
Saving	Saving is disposable income less final consumption expenditure (or adjusted disposable income less actual final consumption, after taking account of an adjustment for pension funds); saving is an important aggregate which can be calculated for each institutional sector.
Services	Services are outputs produced to order and typically consist of changes in the conditions of the consuming units realised by the activities of producers at the demand of the consumers; by the time their production is completed they must have been provided to the consumers.

Single indicator method of deflation	A single indicator method of deflation is a means of estimating the volume movements of value added directly using only one time series instead of double deflation.
SNA (System of National Accounts)	The System of National Accounts (SNA) consists of a coherent, consistent and integrated set of macroeconomic accounts, balance sheets and tables based on a set of internationally agreed concepts, definitions, classifications and accounting rules.
Stocks	Stocks are a position in, or holdings of, assets and liabilities at a point in time and the System records stocks in accounts, usually referred to as balance sheets, and tables at the beginning and end of the accounting period; stocks result from the accumulation of prior transactions and other flows, and they are changed by transactions and other flows in the period (note that stocks of goods are referred to as "inventories" in the System).
Straight-line depreciation	Straight-line depreciation is a depreciation profile based on a constant annual amount of capital consumption over the life of the asset.
Subsidies	Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or the quantities or values of the goods or services which they produce, sell or import.
Subsidies on losses of government trading organisations	Subsidies on losses of government trading organisations consist of the losses incurred by government trading organisations whose function is to buy and sell the products of resident enterprises; when such organisations incur losses as a matter of deliberate government economic or social policy by selling at lower prices than those at which they purchased the goods, the difference between the purchase and the selling prices should be treated as a subsidy.
Tangible fixed assets	Tangible fixed assets are non-financial produced assets that consist of dwellings; other buildings and structures; machinery and equipment and cultivated assets.
Tangible non-produced assets	Tangible non-produced assets are natural assets - land, subsoil assets, non-cultivated biological resources and water resources - over which ownership may be established and transferred
Total economy	The total economy consists of all the institutional units which are resident in the economic territory of a country.
Trade margin	A trade margin is the difference between the actual or imputed price realised on a good purchased for resale (either wholesale or retail) and the price that would have to be paid by the distributor to replace the good at the time it is sold or otherwise disposed of.
Unit value index	A unit value index is a "price" index which measures the change in the average value of units that are not homogeneous and which may therefore be affected by changes in the mix of items as well as by changes in their prices.
Valuables	Valuables are produced assets that are not used primarily for production or consumption, that are expected to appreciate or at least not to decline in real value, that do not deteriorate over time under normal conditions and that are acquired and held primarily as stores of value.
Volume index	A volume index (also called a "quantity index") is most commonly presented as an average of the proportionate changes in the quantities of a specified set of goods or services between two periods of time; volume indices may also compare the relative levels of activity in different countries (eg, those calculated using PPPs).

Wages and salaries	Wages and salaries consist of the sum of wages and salaries in cash and wages and salaries in kind.
Wages and salaries in cash	Wages and salaries in cash consist of wages or salaries payable at regular weekly, monthly or other intervals, including payments by results and piecework payments; plus allowances such as those for working overtime; plus amounts paid to employees away from work for on holiday; plus ad hoc bonuses and similar payments; plus commissions, gratuities and tips received by employees.
Wages and salaries in kind	Wages and salaries in kind consist of remuneration in the form of goods and/or services that are not necessary for work and can be used by employees in their own time, and at their own discretion, for the satisfaction of their own needs or wants or those of other members of their households.
Work-in-progress - inventories	Inventories of work-in-progress consist of goods and services that are partially completed but that are not usually turned over to other units without further processing or that are not mature and whose production process will be continued in a subsequent period by the same producer.
Work-in-progress on cultivated assets - inventories	Inventories of work-in-progress on cultivated assets consist of livestock raised for products yielded only on slaughter, including fowl and fish raised commercially, trees and other vegetation yielding once-only products on destruction and immature cultivated assets yielding repeat products.
