P R E F A C E

Civil Registration System is a continuous, permanent and compulsory recording of the occurrence and characteristics of vital events like Births, Deaths and Still Births. The main objective of the Civil Registration System is to record the annual change in population at National and State Level between two successive decennial Censuses. The registration of births and deaths has been made statutory through Registration of Births and Deaths Act 1969, which came into force in the State on 1st April 1970 vide Government of India Gazette Notification dated 21st March 1970 along with many other States.

The registering authorities at the local bodies are Secretaries of Grama Panchayats, Health Inspectors of Municipalities, Health Officers of Corporations and the Executive Officer of Kannur Cantonment. This report titled "Annual Vital Statistics Report 2023" provides an overview of the working of the Civil Registration System (CRS) in the state and presents a compilation of data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up based on Civil Registration Records.

The report was prepared by the Vital Statistics division of this office under the supervision and leadership of Sri. Vinodan T P, Additional Director (General) & Additional Chief Registrar of Births & Deaths. The sincere efforts put in by Smt. Sindumol K G, Statistical Assistant Gr-I, & Sri. Sabu B, Research Assistant and the timely advice and guidance given by Smt. Yamuna A. R., Deputy Director, Vital Statistics Division to bring out this publication is very much appreciated.

I would like to place on record my appreciation for the co-operation and valuable services rendered by the Chief Registrar, IKM, Local Registrars, District Registrars, Deputy Directors and Staff of the District Offices of Economics & Statistics for bringing out this publication.

I hope that this report would immensely benefit to those who work in the Health sector and Researchers in the field. Suggestions for further improvement of the report will be highly appreciated.

Thiruvananthapuram,

VI	Definition Used in this Report	221

- The Projected Mid-year Population in the State for the year 2023 is 355.62 lakhs comprising of 170.62 lakhs males and 185 lakhs females.
- Number of live births registered during the year 2023 is 393231 as against 443032 during 2022
- Out of the total registered births, 50.87% are male and 49.13% are female
- Sex Ratio at Birth (SRB) is 966 during the year 2023 whereas it was 970 in 2022
- Among the districts, highest SRB is reported in Idukki district (997) and lowest in Thiruvananthapuram district (948).
- Crude Birth Rate (CBR) at the State level in 2023 is 11.06 against 12.43 during 2022.
- The maximum CBR has been reported in Malappuram district (17.11) and minimum in Alappuzha district (6.52).
- Age Specific Birth Rate reaches the peak in the mother's age group of 25-29, followed by 20-24 age group
- There is a marginal decrease in the Total Fertility Rate (TFR) to 1.35 in 2023 from 1.53 in 2022.
- 72.30 % of total live births have been registered within the stipulated time period of 21 days
- During 2023, the share of institutional (Government and Private Hospital) births to total registered births is 98.65 %.
- Most of the deliveries taken place in both the rural and urban area is institutional deliveries. 96.16% deliveries out of total deliveries in rural sector and 99.88% of deliveries out of total deliveries in urban sector are reported as institutional birth during 2023.

- In case of institutional deliveries taken place during 2023, percentage of normal deliveries (52.49) are more than cesarean (44.37).
- The highest number of births occurred in the month of March (9.73%) and the lowest in August (6.72%).
- In the State it can be seen that most of the live births were occurred to the Mothers in the age group 25-29.
- 16.29% of Infants reported low birth weight of less than 2.5 kg during 2023 where as it was 15.9% in 2022.
- The number of Deaths registered during the year 2023 is 304286 as against 323518 during 2022.
- Out of the total registered deaths, the male and female deaths are 55.11% and 44.88% respectively.
- Crude Death Rate (CDR) has decreased to 8.56 in 2023 from 9.15 in 2022.
- Highest CDR has been reported in Kottayam (12.37) and the lowest in Malappuram (5.13)
- The Infant Mortality Rate is 5.26 during 2023 as against 5.21 during 2022.
- The percentage of infant death to total death during 2023 is 0.68% where as it is 0.71% in 2022.
- Percentage of deaths occurred in institutions during 2023 is 56.12%.

Vital Rates in Kerala - 2023 (At a Glance)

Age-Sex Structure of Population

1	Sex Ratio	1084
1 a)	Sex Ratio at Birth	966
2	Masculinity Proportion	480
3	Aged – Child Ratio	53.50
4	Child-Women Ratio	262.85
5	Aged Dependency Ratio	34.40
	a) Young dependency ratio	12.21
	b) Old dependency ratio	46.61
	c) Total dependency ratio	
II Fertility Indicators		
1	Crude Birth Rate	11.06
2	General Fertility Rate	39.80
3	Age-specific Fertility Rate	
	15-19	6.94
	20-24	73.42
	25-29	101.43
	30-34	64.46
	35-39	20.69
	40-44	3.19
	45-49	0.50
4	Total Fertility Rate	1.35
5	Gross Reproduction Rate	0.66

III Mortality Indicators		
1	Crude Death Rate	8.56
2	Percentage of Infant Death to total death	0.68
3	Infant Mortality Rate	5.26
(a)	Neo-natal Mortality Rate	3.69
(b)	Early Neo- natal Mortality Rate	2.64
(c)	Late Neo- natal Mortality Rate	1.06
(d)	Post Neo- natal Mortality Rate	1.57
(e)	Peri Neo- natal Mortality Rate	6.74
4	Still Birth Rate	4.12
5	Maternal Mortality Ratio (per one lakh live birth)	25
IV Percentage distribution of births by type of Medical attention at the time of delivery		
1	Government Hospital	30.33
2	Private Hospital	68.32
3	Qualified Professional	0.35
4	Untrained functionary and others	0.96
5	Not Specified	0.04
V Percentage distribution of deaths by type of Medical attention at the time of death		
1	Institutional	56.12
2	Qualified Professional	14.74
3	No Medical attention	29.12
4	Not specified	0.02

Vital Rates in Kerala - 2010 to 2023

Year	Crude Birth Rate	Crude Death Rate	Infant Mortality Rate	Still Birth Rate	Maternal Mortality Ratio (per 1 lakh live birth)
2010	15.75	6.88	7.42	5.30	30
2011	16.75	7.32	7.53	4.92	18

The Civil Registration System in Kerala

Introduction

Registration of Births and Deaths is an important source for demographic data for socio-economic development and population planning. In India, the need for dependable demographic data was felt soon after independence heralding the era of Five Year planning. In the beginning, the registration of Births and Deaths started on voluntary basis and there was no uniformity in statistical returns resulting in both under registration and incomplete coverage. In order to unify the civil registration activities, the Civil Registration System (CRS) was introduced in India under the Registration of Births and Deaths Act (RBD Act), 1969. Civil Registration System may be defined as a continuous recording of vital events such as births, deaths and marriages occurring in a population. The basic uses of data from Civil Registration System are:

- Maintenance of permanent records on births and deaths as legal documents.
- Assessment of continuous changes in population.
- Evaluation of success of socio-economic programmes by indicators based on vital events and size of population.

As a matter of fact, requirement of this system as legal proof of births and deaths should in itself be strong enough reason for any country to have a fully operational CRS. In India the registration of vital events and the administrative machinery for this purpose has been in existence for more than a century. It had been working under diversified Acts and executive instructions thus making it unsuitable for the independent India.

1.1 Registration of Births and Deaths Act 1969

This Act replaced the then existed laws and unified the system of registration throughout the country. Under the RBD Act 1969, registration of births and deaths is made compulsory. It has become mandatory on the part of head of house hold or his representative to report and register domiciliary vital events, for medical officers in charge of medical institution in respect of births and deaths occurring in these institutions. The Act also provided the statutory authority at Centre, State, District and local level. It prescribed definitions,

principles, personnel and penalties connected with enforcement of the Act. It enabled Central Government to insist uniformity in registration procedures and bring out comparability in vital statistics registered in different parts of the country.

Statistics of births and deaths are compiled on the basis of Civil Registration System introduced under the Registration of Births and Deaths (RBD) Act, 1969. It is required under the Act that each vital event should be reported within 21 days from the date of occurrence of the event. Registration of events beyond the prescribed period of 21 days is possible under the provisions of Section 13 of the Act.

National Level

At national level the Registrar General of India (RGI) administers the CRS. He is empowered to issue general directions and take steps to co-ordinate and unify the activities of Chief Registrars of the States, who are the Chief Executive authority in the states for executing the provisions of RBD Act 1969 and the rules and orders made there under. They were responsible for coordinating, unifying and supervising the work of CRS within their respective State.

State Level

The Registration of Births and Deaths Act 1969 (Central Act 18 of 1969) came into force in Kerala on 1st April 1970 by the Government of India Gazette notification dated 21st March 1970 along with many other states. The Kerala Registration of Births and Deaths Rules 1970 published in G.O.(P)No.7/70/LAD dated 29th June 1970 by

S.R.O.No.262/70 Gazette dated 1st July 1970 have been approved by the Government of India under section 10(1) of the said Act.

As per the circular No.6/4/97/VS (CRS) dated 31/5/1999 of the office of the Registrar General of India, the revamped Civil Registration system was introduced with effect from 01/01/2000. In tune with the newly introduced system, the Registration of Births and Deaths Rules 1970 was replaced with the new rules, viz Kerala Registration of Births and Deaths Rules 1999 and it was published as per the order G.O.(P)No.8/2000/LSGD dated 06/01/2000.

1.2 Organizational Setup in the State

Chief Registrar

The Joint Director of Panchayats, Government of Kerala is the Chief Registrar of Births and Deaths.

Additional Chief Registrar

The Additional Director (General) of Economics and Statistics Department is designated as the Additional Chief Registrar of Births and Deaths.

Deputy Chief Registrar

Deputy Chief Registrar assists the Chief Registrar in the day-to-day affairs relating to the registration of Births and Deaths at the State level. Deputy Director of Economics and Statistics, Vital Statistics division has been designated as Deputy Chief Registrar to assist Additional Chief Registrar to release timely birth & death statistics.

District Registrars

The Deputy Director of Panchayats of the 14 districts in the State are functioning as the District Registrars. The Secretaries of Corporations, Municipalities and the Executive Officer of Kannur Cantonment area are exercising the powers of District Registrars.

Additional District Registrars

The Deputy Directors of the 14 District Statistical Offices are functioning as the Additional District Registrars of Births and Deaths of respective revenue districts.

Registrars

The Secretaries of Grama Panchayats, Health Officers of Corporations, Health Inspectors of Municipalities and Executive Officer of Kannur Cantonment area are functioning as the Registrars of births and deaths.

1.3 The Process

The data reporting forms contain details of birth, death and still birth. Birth Registration form contains information on date of occurrence/registration, usual residence of mother, place of birth, sex and weight of the child, order of birth, type of medical attention at birth, type of delivery and characteristics of the parents including their name, age, religion, educational status, occupation etc. In the case of death, information includes name, sex, age, marital status, religion, occupation, usual residence of the deceased,

place of occurrence, date of occurrence / registration, cause of death, whether medically certified or not and kind of medical attention received at the time of death and characteristics of the mother, pregnancy period etc. in the case of still births. These forms have two parts: legal and statistical. The statistical part of the vital events registered in the registration units are entered in to the Sevana software developed by IKM, Kerala. The Vital Statistics Division of the DES prepares this report as per the methodology and instructions issued by the Registrar General of India (RGI) from time to time. The report contains district-wise statistics of births, deaths, infant deaths, still births and the related vital rates.

1.4 Status of Reporting

The local bodies, viz., the Grama Panchayats, Municipalities and Corporations function as the registration units of vital events in the State. Place of Occurrence of events and Year of Registration are the criteria used in the report for compiling vital events. Total Registration units in the State are 1035 units. The details of registration units (Rural & Urban) are given in Table A1. Utmost care has been given for the above process avoiding duplications and omissions, and eventually a cent percent reporting was achieved both in rural as well as urban areas.

Analysis of Vital Events – Live Births

2.1 Registered Live Births

Total number of live births registered during the year 2023 was 393231. Out of the total live births registered, 200028 are male births, 193185 are female births and the remaining 18 cases are not reported its sex. It is seen that more males (50.87%) were born than females (49.13%) which resulted to a sex ratio at birth of 966 females per 1000 males.

Table- 2.1(i) Live Births by Sex

Sex	No. of Births registered	%
Male	200028	50.87
Female	193185	49.13
Not Reported	18	0.00
Total	393231	100.00

According to the number of live births registered by area, 129445 births (32.92%) were reported from rural areas and 263786 births (67.08%) from urban areas. The following Table 2.1(ii) shows the percentage of area wise registered live births and the chart 2.1(ii) shows the pictorial presentation of percentage of live births registered by area. It is observed that the percentage share of live births registered in rural area is lower than that of urban area.

The following Table 2.1(i) shows the registered live births by sex. Also the chart 2.1(i) presents the pictorial presentation of percentage of live births registered by sex.

Chart 2.1(i) - Percentage Distribution of Live Births by Sex

Table- 2.1(ii) Live births by Area

Rural/Urban	No. of births registered	%
Rural	129445	32.92
Urban	263786	67.08
Total	393231	100.00

Chart 2.1(ii)-Percentage Distribution of Live births by Area

2.2 Time Gap in Registration of Birth

The registered births have been classified in four categories depending upon their period of registration. The four time periods considered for the purpose are: i) within prescribed time limit (up to 21 days), ii) After 21 days but within 30 days, iii) After 30 days but within 1 year, iv) More than 1 year. Under the RBD Act 1969, all vital events are to be registered within 21 days from the date of occurrence of the event. Even though there exists a system of birth registration at the place of delivery (hospital) through the institution concerned, there were delayed registrations still prevails. The

percentage of registration achieved out of total registration undertaken in the year 2023 within the prescribed time limit (up to 21 days) is 72.30%. As per area wise, it is 88.56% in rural area and 64.32% in urban areas. During the year 2023, 27.70% births registered were reported as delayed registration. In the case of rural area, it is 11.44%, where as in urban area, delayed registration reported is 35.68%. District wise details of time gap in registration of live births are given in Table B3 (Rural), B3(Urban) and B3(Rural & Urban).

2.3 Live births by month wise Registration

In 2023, highest number of births registered in March with 38242(9.73%) of the total births in the State. It was followed by the months of May (8.79%), April (8.71%) & October (8.55%). The

month of August (6.72%) had the least number of births registered in 2023. The month wise live births registered during 2023 are shown in the following table 2.3 and chart 2.3.

Table – 2.3 Month-wise distribution of Live Births

Month	Number of Live Births	%
January	33056	8.41
February	30038	7.64
March	38242	9.73
April	34235	8.71
May	34569	8.79
June	31514	8.01
July	33209	8.45
August	26415	6.72
September	32596	8.29
October	33612	8.55
November	33312	8.47
December	32433	8.25
Total	393231	100.00

Chart 2.3-Month wise distribution of Live Births

2.4 Sex Ratio at Births by Month and District

The Sex Ratio (Number of females per thousand males) at birth is an important indicator to map the sex differential of the population at the beginning of their life. The sex ratio at birth has been calculated by month and district wise for the year 2023 is shown below in the following table 2.4(1) & 2.4(2). While analyzing the month wise Sex

Ratio at birth, the highest Sex Ratio at birth reported during the months of May, October and the lowest during the month of January. In the case of district wise births reported, it is seen that sex ratio at birth is highest in Idukki followed by Pathanamthitta and the lowest in Thiruvananthapuram District. Chart 2.4(i) & 2.4(ii) gives the pictorial presentation of sex ratio at birth by month wise & district wise.

Table – 2.4(1) Month wise Sex Ratio at Birth

Month	Number of Live Births registered		Sex Ratio at Birth
	Male	Female	
January	16967	16089	948
February	15371	14665	954

Chart 2.4(2)-District -wise distribution of Sex Ratio at birth

2.5 Medical attention received at the time of delivery

The percentage distribution of medical attention received at the time of delivery has been given in the following table 2.5(i). The data shows that majority of births have been occurred in an institution, either in Government or private hospitals. Out of total births registered during

2023, Institutional births occurs in 98.65% of cases, 0.35% of the cases were attended by Physicians/Nurse/Midwife. However, about 0.46% of the events were still attended by traditional birth attendant and another 0.50% by Relatives and others.

Table - 2.5(i)-Percentage distribution of Live Birth by Medical attention at Birth

Rural/ Urban	Type of attention at Delivery							Total
	Government Institutions	Private Institutions	Total	Doctors, Nurses and Midwives	Traditional birth attendants	Relatives and others	Not stated	
Rural	5.68	25.97	31.65	0.31	0.45	0.48	0.02	32.92
Urban	24.65	42.35	67.00	0.04	0.01	0.02	0.02	67.08
Total	30.33	68.32	98.65	0.35	0.46	0.50	0.04	100.00

Chart 2.5(i)-Percentage distribution of Live Birth by Medical attention at Birth

The following Table 2.5(ii) represents the percentage distribution of live birth by type of medical attention received at the time of delivery in rural/urban area separately. It is seen that out of 129445 live births in rural area, 96.16 % events are reported as institutional birth and in the case

of urban area birth is 263786 , the corresponding rate is 99.88%. In spite of having enough medical facilities across the State, a small percentage of live births (1.37%) is still attended by traditional birth attendant/ relatives in rural area and 0.01% in urban area

Table – 2.5(ii) Percentage distribution of Live Birth by medical attention at birth (Rural/Urban)

Rural/ Urban	Type of attention at delivery							Total
	Government Institutions	Private Institutions	Total	Doctors, Nurses and Midwives	Traditional birth attendants	Relatives and others	Not stated	
Rural	17.26	78.90	96.16	0.94	1.37	1.46	0.07	100.00
Urban	36.74	63.13	99.88	0.07	0.01	0.02	0.02	100.00

Chart 2.5(iii) Percentage distribution of Live Birth by Medical Attention at Birth (Urban)

2.6. Live birth by Type of institution and Method of delivery

Delivery or childbirth can be categorized on the basis of place of delivery, type of delivery (normal/caesarean section) and the personnel conducting delivery. These factors affect the chances of survival and subsequent health of mother and child.

The following Table 2.6 gives the percentage distribution of registered live births occurred in institutions by method of delivery. During 2023, the percentage share of institutional deliveries to total live birth is 98.65%. While considering the institutional wise, it is seen that out of the 119264

Live births occurred in Govt. Hospitals, 55.26% are normal deliveries and 43.18% are caesarians. But in the case of private hospitals, out of 268666 live births occurred, the percentage of normal deliveries and caesarians are 51.26% and 44.89% respectively. It is also noted that in both the type of institutions, percentage of normal deliveries are more than that of caesarian. The pictorial presentation of percentage distribution of institutional live births by method of delivery is given in the following charts 2.6(i), 2.6(ii) & 2.6(iii).

Table – 2.6 Percentage distribution of Live Births by Type of institutions and Method of Delivery

Type of Institution	Method of Delivery				Total
	Normal	Caesarean	Forceps/ vacuum	Not Stated	
Government Institution	55.26	43.18	1.55	0.01	100.00
Private Institution	51.26	44.89	3.84	0.01	100.00

Chart -2.6 Percentage distribution of Live Births by Institutions and Method of Delivery

2.7. Live Birth by method of Delivery and Age of Mother

The following Table 2.7 presents the Percentage distribution of live birth by method of delivery and age group of mothers. As per the percentage of live birth registered by type of attention at delivery, 52.95% are normal deliveries and 43.88% are of Caesarean. The highest percentage

of live births (38.26%) belongs to mothers in the age group 25-29, followed by the age group 20-24 (27.04%). In addition to this, highest percentage of normal (20.34%) as well as caesarean (16.72%) deliveries are also belongs to the 25-29 age group.

Table – 2.7 Percentage distribution of Live Birth by method of Delivery and Age group

Method of Delivery	Age of Mother (years)									Total
	<15	15-19	20-24	25-29	30-34	35-39	40-44	45 & above	Not stated	
Normal	0.00	1.58	16.28	20.34	11.05	3.33	0.33	0.02	0.02	52.95
Caesarean	0.00	0.68	9.63	16.72	11.47	4.43	0.77	0.15	0.01	43.88

Not stated	0.00	0.00	0.01	0.01	0.01	0.00	0.00	0.00	0.04	0.07
Total	0.00	2.40	27.04	38.26	23.04	7.90	1.11	0.17	0.07	100.00

Note: Total may not add up to 100 due to rounding off.

Chart (2.7)-Percentage distribution of live birth by method of delivery

2.8. Live births by age of mother and birth order

Table 2.8 below presents the distribution of live births by age of mother and birth order. In the reproductive age group of 15-49, highest number of live births were reported for the mothers in the

age group of 25-29 (38.26%), followed by the age group 20-24 (27.04%) and thereafter it declined gradually with increase in age.

Table – 2.8 Percentage distributions of Live birth by Age of Mother and Birth order

Age of mother	Birth order								Total
	1	2	3	4	5	6	7+	Not stated	
Below 15	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
15-19	2.34	0.06	0.00	0.00	0.00	0.00	0.00	0.00	2.40
20-24	18.11	7.97	0.88	0.06	0.01	0.00	0.00	0.00	27.04
25-29	16.44	15.36	5.61	0.72	0.10	0.02	0.02	0.00	38.26
30-34	4.93	10.28	5.79	1.68	0.27	0.05	0.04	0.00	23.04
35-39	1.17	3.05	2.19	1.08	0.29	0.07	0.05	0.00	7.90
40-44	0.29	0.36	0.24	0.13	0.06	0.02	0.02	0.00	1.11
45 & above	0.09	0.06	0.01	0.01	0.01	0.00	0.00	0.00	0.17
Age Not Stated	0.02	0.01	0.00	0.00	0.00	0.00	0.00	0.04	0.07
Total	43.39	37.14	14.73	3.67	0.73	0.16	0.13	0.04	100.00

Note: Total may not add up to 100 due to rounding off.

It is observed that 43.39% of the total live births are first order births, 37.14% of total births are second order births and 14.73 % are of third order

births. The fourth and higher order births account for only 4.83% of total births.

Chart-2.8 Percentage distributions of Live Birth by Birth order

2.9. Live births by Educational level of mother and father

Table 2.9 shown below the percentage distribution of live births according to the level of education of father and mother. While considering the educational level of mother, highest percentage of birth registered is in the category “Metric but below graduates”, followed by “Graduate and

above” and there after “Primary but below metric”. In the case of educational level of father also, the same pattern is following. In both the case of educational level of mother and father, percentage is very small in all other categories.

Table – 2.9 Percentage distribution of Live Births by educational level of Mother and Father

Education level	Mother	Father
Illiterate	0.10	0.02
Below Primary	0.21	0.32
Primary but below Metric	5.54	11.20
Metric but below Graduate	44.45	51.73
Graduate and above	39.27	26.26
Not stated	10.43	10.47
Total	100.00	100.00

Chart -2.9 Percentage distribution of Live Births by Educational level of Parents

2.10. Live birth by occupation of Father and Mother

The following table 2.10 shows the Percentage distribution of Live Birth by occupation of Mother & Father. Specific jobs like administrative, executive and managerial jobs

require relatively higher educational qualification, which in turn have impact on family size. Table B16 and B17 gives the details of Live birth by occupation of Mother & Father.

Table – 2.10 Percentage distribution of Live birth by occupation of Mother & Father

Occupation	Father	Mother
Professional, Technical and related workers	0.00	0.00
Administrative, Executive and Managerial Workers	0.58	0.17
Clerical and Related Workers	0.52	0.19
Sales Workers	2.27	0.06

Chart-2.10(ii)-Percentage distribution of Live birth by occupation of Mother

2.11. Live birth by duration of marriage and birth order

Following Table 2.11 presents the percentage distribution of live birth by duration of marriage of mother and birth order. It reveals that 48.72% of births were occurred to young couples having duration of marriage 0-4 years and 31.97% of live

births within 5-9 years after marriage. Obviously higher proportion of births (37.40%) was of first order for the young couples having duration of marriage 0-4 years.

Table – 2.11 Percentage distribution of Live Birth by duration of Marriage and Birth order

Duration of marriage (Years)	Birth order					Total
	1	2	3	4+	Not stated	
0-4	37.40	10.61	0.65	0.06	0.00	48.72

Chart-2.11-Percentage distribution of Live Birth by duration of marriage of Mother

2.12. Live Births by duration of pregnancy and Birth weight

One of the important causes of still birth and infant death is due to premature delivery. Again premature babies having low birth weight (less than 2.5 kg) are susceptible to diseases. Out of the total live birth registered, 16.29% were born with low birth weight. A clear association between duration of pregnancy and birth weight can be observed in the following Table 2.12. It is seen

that 40.06% of babies having birth weight between 2.500-3.000 kg and 42.88% of babies having weight between 3.000 - 4.000 kg and only 0.77% of babies having birth weight above 4kg. 78.30% deliveries were occurred within the pregnancy period of 37-39 weeks and 0.82% of deliveries occurred below the pregnancy period of 32 weeks

Table – 2.12 Percentage distribution of live birth by duration of Pregnancy and Birth weight

Duration of pregnancy (weeks)	Birth weight (Kg)					Total
	<2.5	2.5-3.0	3.0-4.0	4+	Not stated	
<32	0.74	0.04	0.03	0.00	0.00	0.82

Chart-2.12 Percentage distribution of Live Birth by duration of Pregnancy and Birth weight

2.13. Live Births by age of Mother and Birth weight

The following Table 2.13 presents the percentage distribution of live birth by age of mother and birth weight. It is observed that out of total births occurred, 16.29% of infants had a low birth weight of less than 2.5 kg and it is more in the mother's age group 25-29 (5.73%), followed by

the age group 20-24 (4.33%). It is also observed that highest percentage of babies (42.88%) have the weight of 3.000 - 4.000 kg and in this category, it is more in the mothers age group 25-29 (16.91%).

Table - 2.13 Percentage distribution of Live Birth by Age of Mother and Birth weight

Chart-2.14 -Percentage distribution of Live Birth by Birth weight

Registration of Birth events occurred during 2023

Total registration of birth in 2023 is 393291 out of which 376211 births occurred in the year 2023 whereas 12049 births occurred during 2022 and the rest births occurred for the years before 2022 (Ref. Table B26 & B27). Registration of 2023 birth data occurred during 2022 is highest in the

month of January. This may be due to the birth events occurred during the month of December 2022. Birth occurred during 2022, registered in 2023 is more in Malappuram district and it is least in Pathanamthitta district.

CHAPTER - III

Analysis of Vital Events

3.1 Registered Deaths

In 2023, a total of 304286 deaths were registered in the state. The following Table 3.1(i) provides the percentage distribution of registered deaths in the state by sex. Out of the total registered deaths, males constitute 55.11% (167700) and females constitute 44.88% (136569) which shows that male deaths registered is more than that of female death.

The Rural /Urban classification reveals that out of total deaths registered during the year 2023, rural area represents 63.36% and that of urban area is 36.64%. Table 3.1(ii) shows the percentage distribution of deaths by the area of registration.

Table - 3. 1(i)
Percentage Distribution of deaths by Sex

Sex	No of registered deaths	%
Male	167700	55.11
Female	136569	44.88
Sex not stated	17	0.01
Total	304286	100.00

Chart-3.1(ii) Percentage Distribution of deaths by Sex

Table - 3. 1(ii)
Percentage Distribution of deaths by
Rural & Urban

Rural / Urban	No of registered deaths	%
Rural	192804	63.36
Urban	111482	36.64
Total	304286	100.00

Chart-3.1(ii)
Percentage Distribution of deaths by
Rural & Urban

3.2. Time Gap in Registration

During the year 2023 out of 304286 deaths registered, 190915 deaths (62.74%) were registered within the prescribed time limit (within 21 days of occurrence) and the remaining 113371 deaths (37.26%) registered after the prescribed time period. Percentage of registration within the prescribed time limits of 21 days in Rural and Urban areas are 65.33% and 58.27% respectively.

Similarly, the percentage of delayed registration in rural and urban areas is 34.67% and 41.73% respectively. Detailed report is presented in Tables D3(Rural), D3(Urban) & D3(Rural & Urban).

Table - 3. 2 Time Gap in Registration of deaths by Area

Rural/ Urban	No of registered deaths	Registered within the prescribed time limit		Registered after the prescribed time limit	
		No. of Deaths	% of Registration	No. of Deaths	% of Registration
Rural	192804	125960	65.33	66844	34.67
Urban	111482	64955	58.27	46527	41.73
Total	304286	190915	62.74	113371	37.26

Chart – 3.2 Time Gap in Registration of deaths by Area

3.3. Deaths by month of occurrence

In 2023, highest number of deaths registered in the month of March with 28162 (9.26%) of the total deaths in the State. It was followed by the

months of May (8.98%), and November (8.53%). The month of August had the least number of deaths registered (7.53%).

Following Table 3.3 gives the number and percentage of month wise registered deaths during 2023

Table - 3.3 Percentage Distribution of deaths by the months of occurrence

Months	No of deaths registered	Percentage
January	25741	8.46
February	23666	7.78
March	28162	9.26
April	24905	8.18
May	27313	8.98
June	23597	7.75
July	25690	8.44
August	22917	7.53
September	25538	8.39
October	25553	8.40
November	25941	8.53
December	25263	8.30
Total	304286	100.00

Chart - 3.3 Percentage Distribution of Deaths by the months of occurrence

3.4. Medical attention received at the time of death

Table 3.4(i) and 3.4(ii) shows the percentage distribution of medical attention, received by the deceased at the time of death. It is evident from the Table 3.4(i) is that 56.12% of total registered deaths have occurred in institutions and 14.74% in Non-Institutions. Out of 56.12% of institutional deaths, 27.70% of deaths were reported from rural areas and 28.42% deaths from urban areas.

Similarly, in the case of 14.74% of Non-institutional deaths, share of rural and urban sectors are 11.69% and 3.05% respectively. It is also seen that percentage of registration events in rural area is higher than that of urban area. Another feature observed is that 29.12% of deceased have not received any medical attention at the time of death.

Table - 3.4(i)
Percentage Distribution of deaths by type of Medical attention received at the time of death

Rural/Urban	Institutional	Non-institutional	No medical attention	Not stated	Total
Rural	27.70	11.69	23.96	0.01	63.36
Urban	28.42	3.05	5.16	0.02	36.64
Total	56.12	14.74	29.12	0.02	100.00

Chart-3.4(i)
Percentage Distribution of deaths by type of medical attention at death Kerala

The table 3.4(ii) and Chart 3.4.ii(a) and 3.4.ii (b) shows the percentage distribution of deaths by type of medical attention at the time of death for rural and urban sector separately. It is seen that out of 192804 deaths in rural areas, 43.72% of deaths occurred at institutions and 18.45% per cent at

non-institutions. Similarly, out of 111482 deaths in urban areas, share of deaths in institutions and non-institutions are 77.56% and 8.32% respectively. Also, 37.81% of deaths in rural areas and 14.08% of deaths in urban areas have no medical attention received at the time of death.

Table - 3.4(ii)
Percentage Distribution of deaths (Rural/Urban) by type of medical attention at death

Rural/Urban	Institutional	Non-institutional	No medical attention	Not stated	Total
Rural	43.72	18.45	37.81	0.01	100.00
Urban	77.56	8.32	14.08	0.04	100.00

Chart -3.4(ii)
Percentage Distribution of deaths by type of medical attention at death-Rural/Urban

Chart -3.4 (ii a)

Chart -3.4 (ii b)

3.5. Deaths by age and sex

The table -3.5 given below shows the percentage of death in different age group by sex. Among different age groups, highest percentage of death (58.39%) was in the age group 70+ years followed by 15.68% in the age group 55-64 years and

11.02% in the age group 65-69 years. It can be seen that percentage of male deaths is higher than that of females in all the age groups except in 70+ age group where in this category, percentage of female deaths is higher than that of male deaths.

Table – 3.5 Percentage Distribution of deaths by Age and Sex

Age	Male	Female	Total
<1	0.38	0.30	0.68
1-4	0.11	0.06	0.17
5-14	0.18	0.13	0.32
15-24	0.79	0.31	1.10
25-34	1.21	0.41	1.61
35-44	2.40	0.83	3.23
45-54	5.27	2.27	7.54
55-64	10.32	5.36	15.68
65-69	6.78	4.24	11.02
70+	27.54	30.85	58.39
Age not stated	0.14	0.12	0.27
Total	55.11	44.88	100.00

3.6. Maternal Deaths by age of Mother

Maternal Death means death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes. While considering the maternal death occurred in different age groups, it reveals that out of total maternal deaths registered, highest percentage (23.23%) of maternal deaths have been reported in the age group ‘45+’ during the year 2023.

Table -3.6 Percentage distribution of maternal death by Age

Age of mother	Number of maternal death	%
Below 15	0	0.00
15-19	2	2.02
20-24	4	4.04
25-29	10	10.10
30-34	9	9.09
35-39	8	8.08
40-44	9	9.09
45+	23	23.23
Not stated	34	34.34
Total	99	100.00

Chart-3.6-Percentage distribution of maternal death by Age

3.7. Cause of Deaths by age and sex

The table 3.7 presents the details of top 10 leading causes of death in the State during the year 2023. Overall, the leading cause of death is Heart attack, followed by Cancer and Asthma. Out of 304286 deaths registered, percentage of deaths due to Heart attacks is 22.14%, followed by Cancer

(7.87%), Asthma (6.25%), Suicide (2.59%) Kidney Trouble (2.29%) and Paralysis (2.18%). It can be observed that percentages of suicidal deaths are higher for males than that of females. The Percentage of registered deaths due to accident was 1.04%.

Table - 3.7 Percentage distribution of death by sex and some causes of deaths

Cause of death	Male	Female	Total
Cancer	4.57	3.30	7.87
Diabetes	0.51	0.56	1.07
Heart attack	13.36	8.78	22.14
Asthma	3.37	2.88	6.25
Liver Disease	0.97	0.41	1.38
Paralysis	1.16	1.03	2.18
Accident (Traffic/Vehicle)	0.88	0.16	1.04
Suicide	2.09	0.50	2.59
Blood Pressure	0.66	0.75	1.41
Kidney Trouble	1.36	0.92	2.29

Chart-3.7- Percentage distribution of death by some causes of death

CHAPTER - IV

Analysis of Vital Events – Infant Deaths

4.1. Registered Infant deaths

The infant deaths (death of a child less than one year old) registered by place of occurrence (Rural/ Urban) of the event for the year 2023 has been given in Table 4.1(i). It may be observed that the share of rural area is 39.20% while that of urban area is 60.80% in total registered infant deaths during the year. At the state level, the percentage share of infant deaths to total deaths in the year

2023 is 0.68%. Also, the Table 4.1(ii) shows the Percentage distribution of infant deaths by sex. It is seen that out of 2069 infant deaths, male death is 1155 (55.82%), where as that of female death is 911 (44.03%) and the remaining 3 deaths (0.14%), sex is not reported. The share of female infant deaths in total female deaths is 0.67% while the same for male is 0.69%.

Table-4.1(i) Percentage distribution of infant deaths by Place of occurrence

Place of occurrence	No .of registered deaths	No .of registered infant deaths	% Share of Registered Infant Deaths by Place of Occurrence	% of Registered Infant Deaths to Total Registered Deaths
Rural	192804	811	39.20	0.42
Urban	111482	1258	60.80	1.13
Total	304286	2069	100.00	0.68

Chart-4.1(i)-Percentage distribution of infant deaths (Rural/Urban)

Table-4.1.(ii) Percentage distribution of infant deaths by Sex

Sex	No. of Registered deaths	No. of registered infant deaths	% Share of Registered Infant Deaths by sex	% Share of Registered Infant Deaths to Total registered Deaths
Male	167700	1155	55.82	0.69
Female	136569	911	44.03	0.67
Sex not reported	17	3	0.15	17.65
Total	304286	2069	100.00	0.68

Chart - 4.1(ii)- Percentage distribution of infant deaths by Sex

4.2. Infant Deaths by age

Percentage distribution of infant death by age group is presented below in Table 4.2. The data reveals that 50.12% of infant deaths have been occurred to the infants aged less than seven days. 20.06% of infant death belongs to the age group

7-28 days and 22.72% belongs to the age group 28 days to 6 months. Majority of infant death occurred within 7 days of age. The similar pattern could be observed in rural and urban areas also.

Table – 4.2 Percentage distribution of infant death by age

Age	Rural	Urban	Total
7 days	19.14	30.98	50.12
7-28 days	8.51	11.55	20.06
28 days-6 months	8.36	14.35	22.72
6 months-1 year	3.19	3.91	7.10
Total	39.20	60.80	100.00

Chart-4.2-Percentage distribution of infant death by age

Analysis of Vital Events – Still Births

5.1. Registered Still Births

The World Health Organization (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. During the year 2023, a total of 1625 still births comprising of 827 males, 778 female and 20 sex not reported were registered. The following table 5.1(i) shows the percentage distribution of registered still births by

sex and the pictorial presentation is given in chart 5.1(i). Also the Table 5.1(ii) given below presents the still births registered by place of occurrence (Rural / Urban) of the event for the year 2023. It may be observed that out of total registered still births, 35.38% is in rural areas and 64.62% in urban areas.

Table - 5.1(i) Percentage distribution of registered Still births by Sex

Sex	Still births registered	%
Male	827	50.89
Female	778	47.88
Sex Not reported	20	1.23
Total	1625	100.00

Chart-5.1(i) Percentage distribution of registered Still births by Sex

Table - 5.1(ii) Percentage distribution of registered Still births by Rural/Urban

Rural/Urban	Still births registered	%
Rural	575	35.38
Urban	1050	64.62
Total	1625	100.00

Chart-5.1(ii) Percentage distribution of registered Still births by Rural/Urban

5.2. Still births by age of mother

The following Table 5.2 shows the distribution of still births by age of mother at birth. It is seen that the highest percentage of still birth has been reported in the age group 25-29, followed by the age group 30-34, 20-24, 35-39 and for all other age groups, the number of still births are very low.

Table - 5.2 Percentage Distribution of Still Births by Age of Mother

Age of mother	Still birth Registered	Percentage
Below 15	1	0.06
15-19	40	2.46
20-24	343	21.11
25-29	528	32.49
30-34	371	22.83
35-39	174	10.71
40-44	44	2.71
45+	7	0.43
Age not stated	117	7.20
Total	1625	100.00

5.3 Still births by duration of pregnancy

Percentage distribution of still births by duration of pregnancy is given below in Table 5.3. Highest percentage of still birth is reported under the category of pregnancy duration of less than 32

weeks (42.83%), followed by the period of 32-36 weeks(28.49%) and lowest in the pregnancy period of 40 or more weeks(6.65%). This data reveals that one of the predominant causes for still birth is due to premature delivery.

Table - 5.3 Percentage distribution of Still births by duration of pregnancy

Duration of pregnancy (weeks)	Still births registered	%
<32	696	42.83
32-36	463	28.49
37-39	357	21.97
40+	108	6.65
Not Stated	1	0.06
Total	1625	100.00

Chart - 5.3 Percentage distribution of Still births by duration of pregnancy

5.4. Still Births by type of medical attention received

Table 5.4 given below presents the percentage distribution of still births by type of medical attention received at the time of delivery. Out of 1625 stillbirths reported, 871 (53.60%) still birth

from Government institution and 748 (46.03%) from private medical institutions during the year 2023.

Table - 5.4 Percentage distribution of Still births by type of medical attention received

Type of medical attention	Still births registered	%
Government Institution	871	53.60
Private Institutions	748	46.03
Physician, Nurses and Midwife	0	0.00
Relatives & Others	0	0.00
Not Stated	6	0.37
Total	1625	100.00

Chart-5.4-Percentage distribution of still births by type of medical attention received

CHAPTER - VI

Analysis of Vital Rates

6.1 Sex Ratio at Birth (SRB)

The Sex Ratio at Birth is defined as the number of female live births per 1,000 male live births and it is an important indicator to map the sex differential of the population at the beginning of

their life. Sex Ratio at birth for the year 2023 is 966 whereas it was 970 for the year 2022. Among the districts, highest SRB has been reported in Idukki district (990) and the lowest in Kollam district (940).

6.2 Crude Birth Rate (CBR)

The Crude Birth Rate is the number of live births occurring among the population of a given geographical area during a given year, per 1,000 population of the given geographical area during the same year. CBR is the number of live births in a year per 1000 population and it shows the growth or decline of population in the region.

During the year 2023, the CBR is 11.06, whereas it was 12.53 during 2022 which shows a marginal decrease of 1.47. Generally, Crude Birth Rate in the State shows a decreasing tendency. A declining trend has been observed from the chart given below.

Chart-6.2(i)-Trend in Crude Birth Rate –Kerala (2010-2023)

The graphical representation of district wise birth rate in the State during the year 2023 is depicted in the following chart-6.2(ii). The District wise analysis of the vital events shows that the highest

birth rate was recorded in Malappuram district (17.11), followed by Wayanad (12.76), Kozhikode (12.65) and Kannur (11.90) districts and the lowest in Alappuzha district (6.52).

Chart 6.2(ii):- District wise Birth Rate

6.3 Crude Death Rate (CDR)

Crude Death Rate (CDR) is the total number of deaths per year per 1,000 population. The Crude Death Rate (CDR) of the State during past 14 years is presented in the chart given below. From

the chart 6.3, it is observed that, there is not much change in CDR upto 2020 and there was a hike during 2021 due to COVID 19 pandemic and then it shows a decreasing tendency.

Chart-6.3-Crude Death Rate (2010-2023)

6.4 District Wise Death Rate

District wise death rates are shown in the chart below. Among the districts the highest death rate 12.37 was recorded in Kottayam followed by

Pathanamthitta (11.95) and Thiruvananthapuram (10.74) districts and the lowest in Malappuram (5.13).

Chart-6.4- District Wise Death Rate

6.5 Infant Mortality Rate (IMR)

Infant Mortality Rate is defined as the infant deaths (deaths of a child less than one year old) per thousand live births. Infant mortality rate is a widely used indicator as it provides valuable insights into the health infrastructure and health status of a country. Infant Mortality of the State

during 2023 was 5.26 whereas it was 5.13 during 2022. IMR of the State during the past 13 years is given in the chart. It is evident from the chart that IMR has decreased from 7.42 in 2010 to 5.26 in 2023.

Chart-6.5-Infant Mortality Rates (2010-2023)

6.5.1 Infant Mortality Rate-District wise

The Table 6.5.1 given below presents the District wise and Sex wise Infant Mortality Rate for the year 2023. Among the districts, it varies from 1.53

Table – 6.5.1 District wise IMR by Sex

District	Male	Female	Total
Thiruvananthapuram	9.13	8.29	8.78
Kollam	1.69	1.37	1.53
Pathanamthitta	5.30	4.07	4.69
Alappuzha	4.19	2.02	3.13
Kottayam	7.50	5.92	6.72
Idukki	3.06	1.75	2.41
Ernakulam	8.00	8.30	8.15
Thrissur	7.14	6.26	6.71
Palakkad	2.11	1.93	2.02
Malappuram	3.26	2.54	2.91
Kozhikode	12.07	8.87	10.50
Wayanad	3.02	1.84	2.44
Kannur	5.57	4.50	5.04
Kasaragod	2.41	1.11	1.83
Total	5.77	4.72	5.26

in Kollam to 10.50 in Kozhikode. It is seen that IMR of female is less than male in all districts except Ernakulam

6.6. Maternal Mortality Ratio (MMR)

As per World Health Organization, “Maternal death is the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes”. One of the key indicators of maternal mortality is the Maternal Mortality Ratio (MMR) which is defined as the number of maternal deaths during a given time period per 1, 00,000 live births during the same time period. The MMR is used as a measure of the quality of a health care system. Maternal Mortality Ratio at state level for the year 2023 was computed as 25 where as it was 30 during 2010.

Chart 6.6. Maternal Mortality Ratio (MMR)-(2010-2023)

6.7 Still Birth Rate (SBR)

The World Health Organization (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. Still Birth Rate is estimated as the ratio of number of still births per

one thousand live births and still births during the year. The SBR for the year 2023 was computed as 4.12 where as it was 5.30 during 2010.

6.8. Conclusion

It is worthwhile to mention that CRS is the only source, which can provide vital rates at State level. Even though cent percentage registration has attained in the case of births, under registration of deaths still exist. Level of registration of maternal deaths and infant deaths are comparatively better. There is also need to correctly identify the

maternal deaths for estimating the vital indicator MMR. All events of maternal deaths and infant deaths has to be registered to ensure accuracy of rates such as IMR, MMR etc., which are essential for health planning. Hence more care should be given to the proper implementation and monitoring of Civil Registration System.

DEFINITIONS USED IN THIS REPORT

1. **Sex ratio** is defined as the number of females per 1000 males in a population

$$\text{Sex Ratio} = \frac{\text{Number of females} \times 1000}{\text{Number of males}}$$

2. **Sex Ratio at birth** = $\frac{\text{Number of female birth registered during the year} \times 1000}{\text{Number of male birth registered during the year}}$

3. **Masculinity proportion** is the proportion of males in the total population.

$$\text{Masculinity proportion} = \frac{\text{Number of males in the Mid year population}}{\text{Total Mid year population}} \times 1000$$

4. **Aged – Child ratio** indicates whether or not a population is young or ageing

$$\text{Aged child ratio} = \frac{\text{Population of above 60 years}}{\text{Population of below 15 years}} \times 100$$

5. **(Total) Dependency ratio** is an age-population ratio of those typically not in the labour force (the dependent part) and those typically in the labour force (the productive part). It is used to measure the pressure on productive population. The dependent part usually includes those under the age of 15 and over the age of 64. The productive part makes up the population in between, ages 15 – 64. It is normally expressed as a percentage. The **(total) dependency ratio** can be decomposed into the **child dependency ratio** and the **aged dependency ratio**.

$$\text{Total dependency ratio} = \frac{(\text{Population of 0-14 years} + \text{Population of above 65 years})}{\text{Population of 15-64 years}} \times 100$$

$$\text{Young (child) dependency ratio} = \frac{\text{Population of 0-14 years}}{\text{Population of 15-64 years}} \times 100$$

$$\text{Old (aged) dependency ratio} = \frac{\text{Population of above 65 years}}{\text{Population of 15-64 years}} \times 100$$

Population of 15-64 years

6. **Crude Birth Rate (CBR)** is the number of live births in a year per thousand of population.

$$\text{Crude Birth Rate} = \frac{\text{Number of Live births during the year}}{\text{Mid-year population}} \times 1000$$

7. **General Fertility Rate (GFR)** is the total number of live births per 1,000 women of childbearing age (ages 15 to 49 years old) in a year.

$$\text{General Fertility Rate} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age group (15-49) years}} \times 1000$$

8. **Age Specific Fertility Rate (ASFR)** is the number of live births per 1,000 women in a particular age groups (usually age 15-19, 20-24 etc.) in a year

$$\text{Age Specific Fertility Rate} = \frac{\text{Number of live birth in a particular age group}}{\text{Mid-year female population of the same age group}} \times 1000$$

9. **Total Fertility Rate (TFR)** may be defined as average number of children that would be born to a woman if she experiences the current fertility pattern throughout her reproductive span (15-49 years).

$$\text{Total fertility rate} = \frac{\left(\sum_{15-49} \text{ASFR} \right) \times 5}{1000}$$

10. **Gross Reproduction Rate (GRR)** is the average number of daughters that would be born to a woman (or a group of women) if she survived at least to the age of 45 and conformed to the age-specific fertility rate of a given year. It is often regarded as the extent to which the generation of daughters replaces the preceding generation of females.

$$\text{Gross reproduction rate} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR for female live births}}{1000}$$

11. Child-woman ratio is the number of children aged 0 to 4 per 1,000 women of childbearing age. It is used as an index of fertility when reliable birth statistics are not available.

$$\text{Child-women ratio} = \frac{\text{Population of (0-4) age group}}{\text{Female population in the age group of (15-49)}} \times 1000$$

12. Crude Death Rate (CDR) is the total number of deaths per year per 1000 people

$$\text{Crude death rate} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

13. Infant Mortality Rate (IMR) is the number of deaths of children less than 1 year old per 1000 live births.

$$\text{Infant mortality rate} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

14. Neo-natal Mortality Rate (NMR) is the number of deaths during the first 28 completed days of life per 1,000 live births in a given year or period. **Neo- natal deaths** may be subdivided into **early neo-natal deaths**, occurring during the first seven days of life, and **late neo-natal deaths**, occurring after the seventh day but before the 28 completed days of life. **Post neo-natal mortality rate** is the number of deaths after 28 days of life but before one year per 1,000 live births in a given year or period. **Perineo-natal mortality rate** is the number of deaths between the fetal viability (22 weeks gestation) and the end of the 7th day after delivery per 1,000 live births in a given year or period.

Neo-natal mortality rate =
$$\frac{\text{Number of infant deaths} < \text{than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Early neo- natal mortality rate =
$$\frac{\text{Number of infant deaths} < \text{than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Late neo- natal mortality rate =
$$\frac{\text{Number of infant deaths of 7 days to} < \text{than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Post neo- natal mortality rate =
$$\frac{\text{Number of infant deaths of 29 days to} < \text{than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

Peri neo- natal mortality rate =
$$\frac{\text{Number of still births and infant deaths of} < \text{than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

15. Still Birth Rate (SBR) is the number of fetal deaths (still births) per 1,000 live births plus fetal deaths (still births).

Still birth rate =
$$\frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

16. Maternal Mortality Ratio (MMR) is the number of maternal deaths per 100000 live births.

Maternal Mortality Ratio =
$$\frac{\text{Number of Maternal Deaths during the year}}{\text{Number of live births during the year}} \times 100000$$
