PREFACE

Ministry of Agriculture and Farmers Welfare, Government of India is implementing the scheme on Improvement of Agriculture Statistics for the purpose of collecting crop statistics from all states in India. In this connection, in Kerala, the Scheme Establishment of an Agency for Reporting Agricultural Statistics, a sub component of the main scheme on Improvement of Agriculture Statistics is implementing for the collection of crop statistics. It is a 100% Central Sector Scheme. In order to collect crop statistics, two sample surveys viz. Land Utilization Survey and General Crop Estimation Survey are being conducted under the EARAS Scheme.

The report on 'Agricultural Statistics' is one of the important annual publications of the Department of Economics and Statistics. This report presents the data relating to crop statistics for the year 2017-18, which is collected under the scheme on Establishment of an Agency for Reporting Agricultural Statistics (EARAS). The data relating to land use (Thirteen way classifications), area under crops, crop production, yield rate, irrigation statistics, comparative study of important crops in Kerala for the 10 years, block-wise area and production of important crops etc. are included in this report. Farm wholesale prices of important crops, rainfall during the year 2017-18, district wise value of major agricultural crops for the year 2016-17 (Provisional) are also included.

This report was prepared by the EARAS Division of the Directorate of Economics and Statistics. I hope this report will be much useful to those engaged and interested in Agricultural Sector, Planners, Administrators, Research scholars, etc.

Suggestions for the improvement of the content of the report will be highly appreciated.

INTRODUCTION

The report “Agricultural Statistics” is annually published by the Department of Economics and Statistics which contains the estimates of area of crops, land utilization pattern, crop production and other major aspects of agricultural sector in Kerala. Initially, the data collected through land utilization survey was used for the preparation of Agricultural Statistics. But the data collected and estimates prepared were inadequate on account of the small sampling frame and limited coverage. With a view to obtain more comprehensive data on Agricultural Statistics in non-reporting states like Kerala, West Bengal and Orissa, Government of India sponsored a scheme namely ‘Establishment of an Agency for Reporting Agricultural Statistics (EARAS)’. In Kerala, the scheme is being implemented by the Department of Economics and Statistics from 1975-'76 onwards. Originally, the scheme was intended to collect Agricultural Statistics from 20 % of the selected villages in each year in a phased manner and covering the entire state within 5 years. EARAS scheme was revised in 1987-'88 with a view to prepare district level estimates with breakup for Block/ Municipality/ Corporation. Further, during 1993-'94, the Investigator Zones were re-organized by suiting the villages to Panchayats. From 2000-'01 onwards, the part panchayats were discontinued and each Investigator Zone was formed with full panchayat/ panchayats.

The area under the crops and yield rate of the crops are the most vital components in the estimation of crop production. The area statistics are collected through the Area Enumeration Survey and the yields of crops are collected through the General Crop Estimation Survey conducted under the EARAS scheme.

Sampling Design

Stratified multistage random sampling method is followed in the survey. The C.D.Block / Municipality (Municipalities with an area of less than 10 square km are merged with the adjoining Blocks) / City Corporation is treated as a stratum. The Blocks are divided into a number of Investigator Zones depending on the area of the block and nature of land. City Corporation is divided into three Investigator Zones. Each Municipality having an area of 10 square km or more is treated as a single Investigator Zone. The Investigator Zones within the stratum form the first stage of sampling units. Clusters within each selected Investigator Zone form the second stage units and the survey number of plots within each selected cluster forms the ultimate of sampling units.

Sampling Size

In each Investigator Zone, 100 clusters are allocated among the dry lands and wet land in proportion to the area under these categories in the zone. 100 survey / subdivision numbers are selected from the Basic Tax Register by using circular systematic random sampling method. These are the key plots for cluster formation.

Investigators identify the survey number of the key plots and 4 or more survey numbers / subdivision numbers adjacent to the key survey number (clubbed survey numbers, if the area of survey numbers are small) as per the Instruction Manual of the survey. Wet and dry land clusters are enumerated separately. Wetland clusters are enumerated in all three seasons - autumn, winter and summer and dry land plots are enumerated at least two times for area enumeration during the agriculture year.

The area under the crops of each season, annual, perennial and horticulture crops etc., land utilization details, irrigation particulars, etc. are collected by the investigators at the time of area enumeration. Simultaneously, Investigators select and conduct crop-cutting experiments of all major crops and the selected minor crops for the estimation of yield rates and production of the respective crops.

The data on mean yield of crops thus obtained are provided to the National Agriculture Insurance Company for assessing the crop damages of the selected crops in the respective seasons and to pay compensation to the concerned farmers for the insured crops under the Pradhan Mantri Fasal Bima Yojana. (PMFBY).

LAND USE PATTERN

The total geographical area of the State is 38,86,287 Ha.

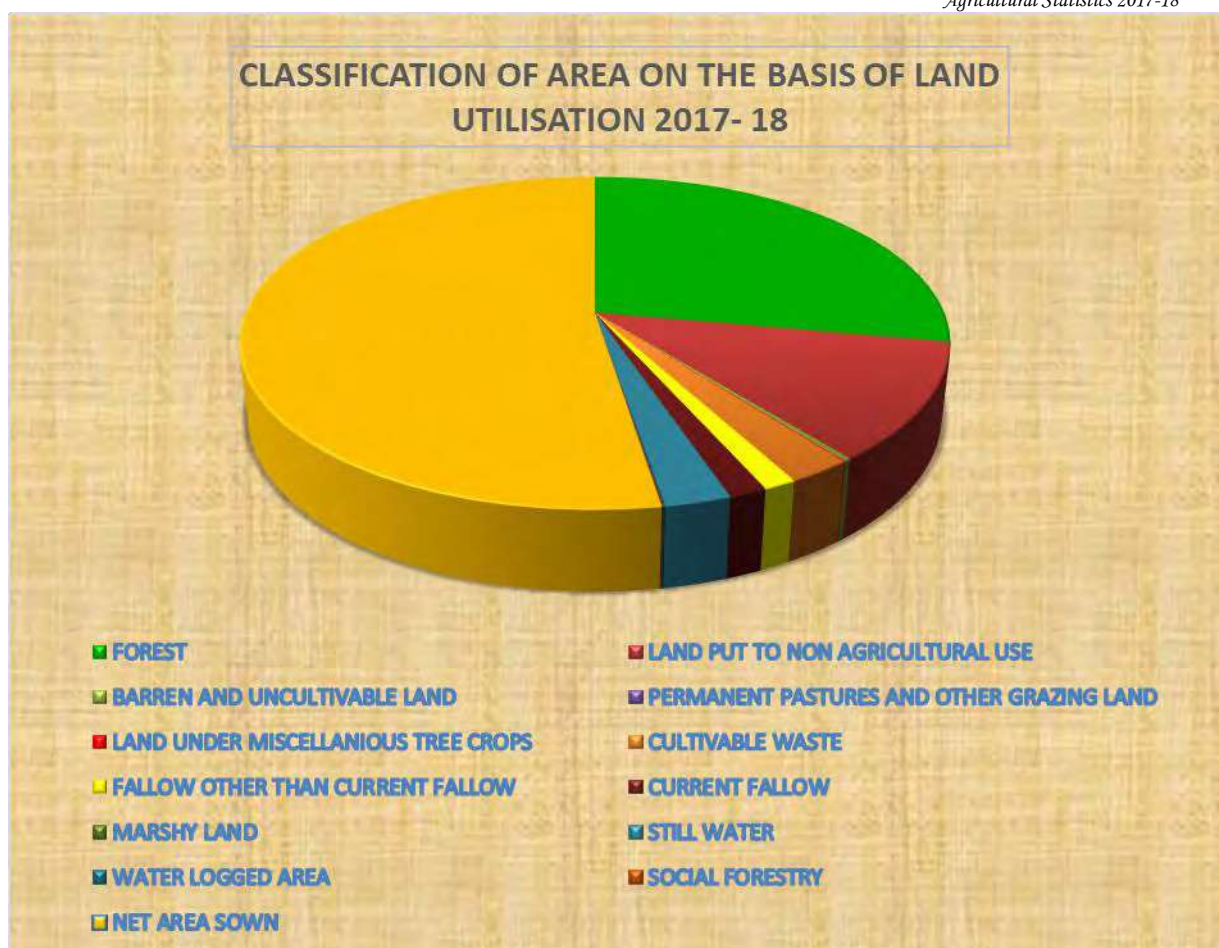

**The net area under cultivation during the year 2017- 18 was
20,40,415 Ha.**

**The total cropped area during the year 2017-18 was
25,79,699 Ha.**

In Kerala, the Geographical area has been classified according to thirteen different uses of land which is presented in Table A

1. Forest: Forest represents all actually forested area as the lands classed or administered as forest under any legal enactment dealing with forest. The forest area of the State during 2017-18 was 10,81,509 Ha which is 27.83% of the total geographical area of the State. Idukki district with an area of 1,98,413 Ha under forest (18.35%) is the highest among districts in the State.

2. Land put to Non-Agricultural use: The land put to use for purposes other than agriculture such as building, pathways, roads, canals, rivers, bus stands, railways, local reservoirs, swamps etc. are brought under this category. Area under this classification is 4,43,041 Ha accounting for 11.40% of the state's geographical area. In Malappuram district about 52,879 Ha (11.94%) put into non-agricultural uses is the highest followed by Palakkad district with an extent of 46,944 Ha (10.60%).

3. Barren and uncultivable land: Land which cannot be brought under cultivation unless at a high cost, whether such a land is in isolated blocks or within cultivated holdings, such as mountains, deserts, hills etc are classified as barren and uncultivable land.

The total land comes under this category is 10,894 Ha which represents 0.28% of the total geographical area of the State. Kasaragode district alone accounted for 3,273 Ha which is 30.04% of the state's barren and uncultivable land.

4. Permanent pastures and other grazing land:- All grazing lands, whether they are permanent pastures or meadows are considered as permanent pastures and other grazing lands. No area falls under this category in 2017-18.

5. Land under miscellaneous tree crops :-All cultivable lands, which is not included under net area sown, but is put to some agricultural use such as land under casuarina trees, thatching grass bamboo bushes and other groves for fuel etc. comes under this category. Out of the total geographical area, land under miscellaneous tree crops and groves are not included in the net area sown and it occupies only 2,245 Ha (0.06%)

6. Cultivable waste : These include land available for cultivation but not taken up for cultivation or abandoned after a few years for one reason or the other . Such lands may be either fallow or covered with shrubs and jungles, which are not put to any use. They may be assessed or unassessed and may lie in isolated blocks or within cultivate holdings. Lands once cultivated but remaining uncultivated for five years or more in succession shall also be included in this category. The total area under cultivable waste during 2017-18 is 96,491 Ha ie, 2.48 % of the total geographical area of the State. The area under this category is highest in Palakkad district accounting 18,487 Ha (19.16%)

7. Fallow other than current fallow : Land which were taken up for cultivation but have been temporarily put off cultivation for a period of not less than one year but not more than five years due to abject poverty of the cultivators, inadequate supply of water, silting of canals and rivers etc are treated as other fallow land. The total area under other fallow land during 2017-18 accounts 49,461 Ha which is 1.27% of the total geographical area. The land under this category was highest in Palakkad district with 12,824 Ha.

8. Current fallow : Land that are kept fallow off out of the net area sown during the previous year are classified as current fallow for the reporting year. The area under this category during 2017-18 is 57,522 Ha., which is 1.48% of total geographical area.

9. Marshy land : Land which gets permanently or periodically inundated by water and characterized by vegetation which includes grasses and weeds. Out of the total geographical area only 14 Ha come under marshy land during the year 2017-18.

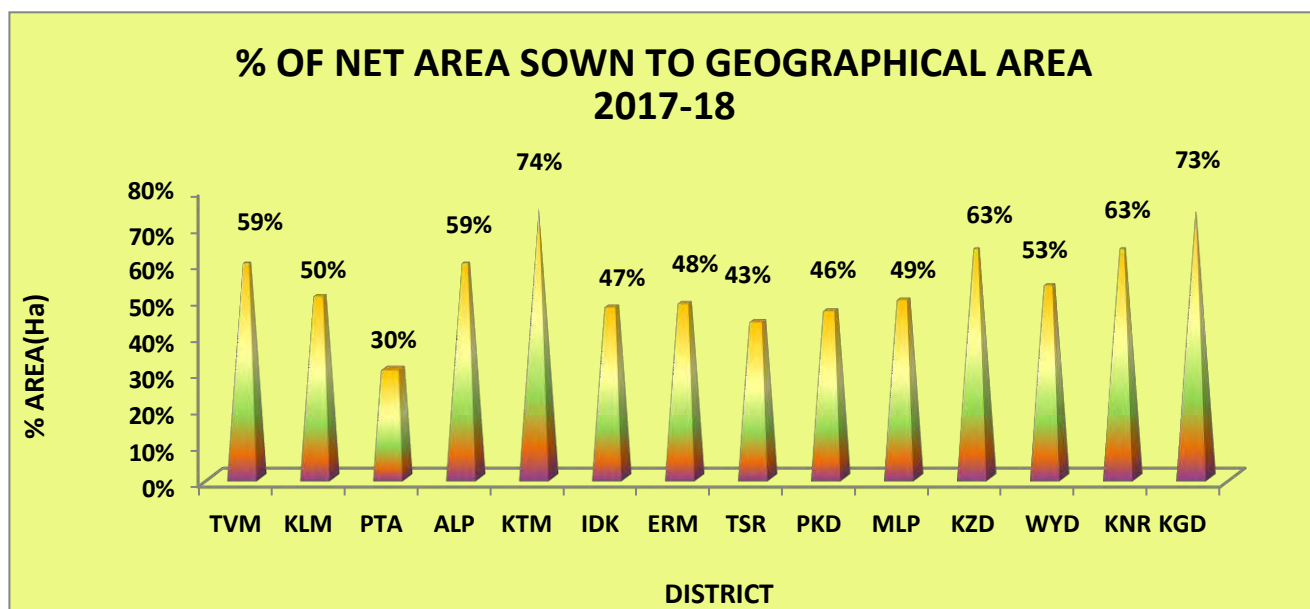

10. Still water: The land under still water is broadly the land occupied by water bodies like rivers, lakes, ponds, reservoirs, backwater, canals, tanks including nature made deeps in which water stands still for most part of the period. This is the land on which there is no

vegetative growth of any kind. Out of the total geographical area, 98,889 Ha of land is under still water constituting 2.54 %. The land under still water is highest in Palakkad district and the area is 15,338 Ha.

11. Water logged area : It is the land where water is at / near the surface and stands for most part of the year. It is generally found in low -lying areas and it excludes lakes, ponds and tanks. The total water logged area for the year 2017-18 is 3,235 Ha. It is 0.08% of the total geographical area of the State.

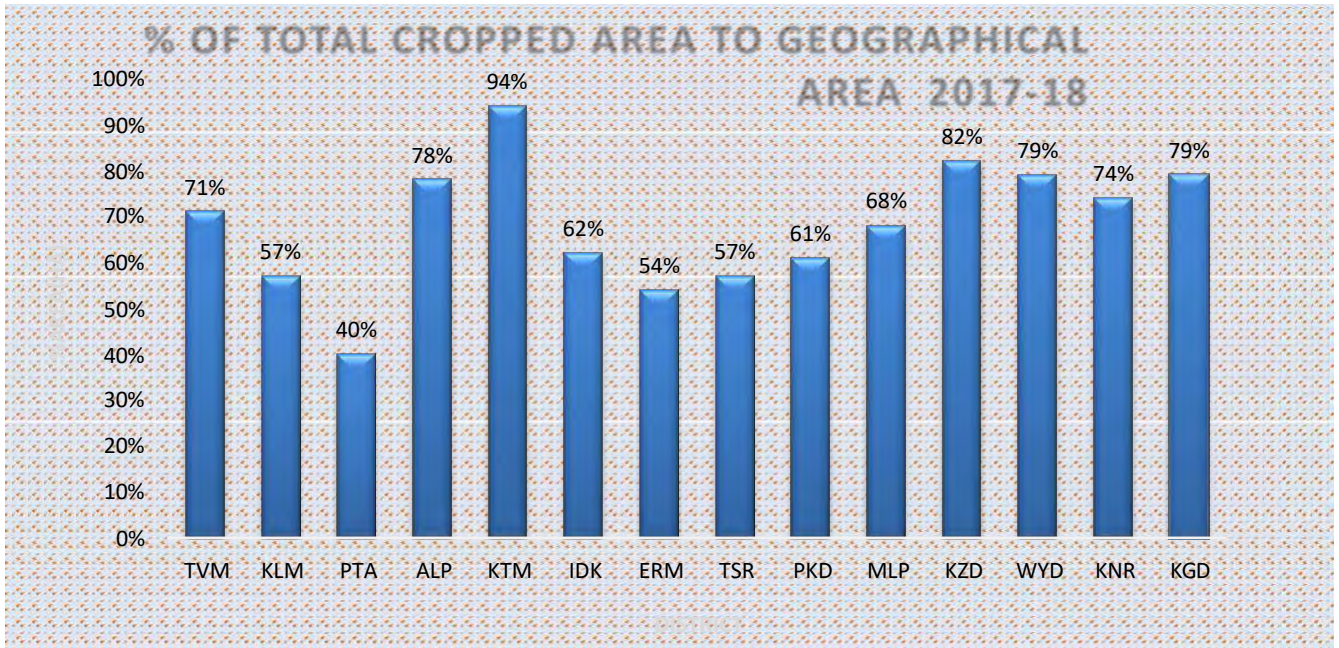

12. Social Forestry : The land under social forestry is the land in which the trees are planted by the side of railway lines, road side, river and canal banks with a view to meet the fuel and the fodder needs of the rural population and to serve the broader goals of soil conservation and provision of shed and shelter for crops. It also includes village forests/plantation which is being used by common man. An extend of 2,571 Ha of land comes under social forestry. The land under social forestry is highest in Idukki district and it is 1,150 Ha (44.73%) followed by Palakkad district 381 Ha (14.82%).

13. Net Area Sown: In calculating the net area sown, area sown more than once will be counted only once. Area cultivated during any part of the agricultural year should come under net area sown. Out of 38,86,287 Ha of total geographical area, 20,40,415 Ha of land constituting 52.50% is cultivated at least once with various crops during the year 2017-18.

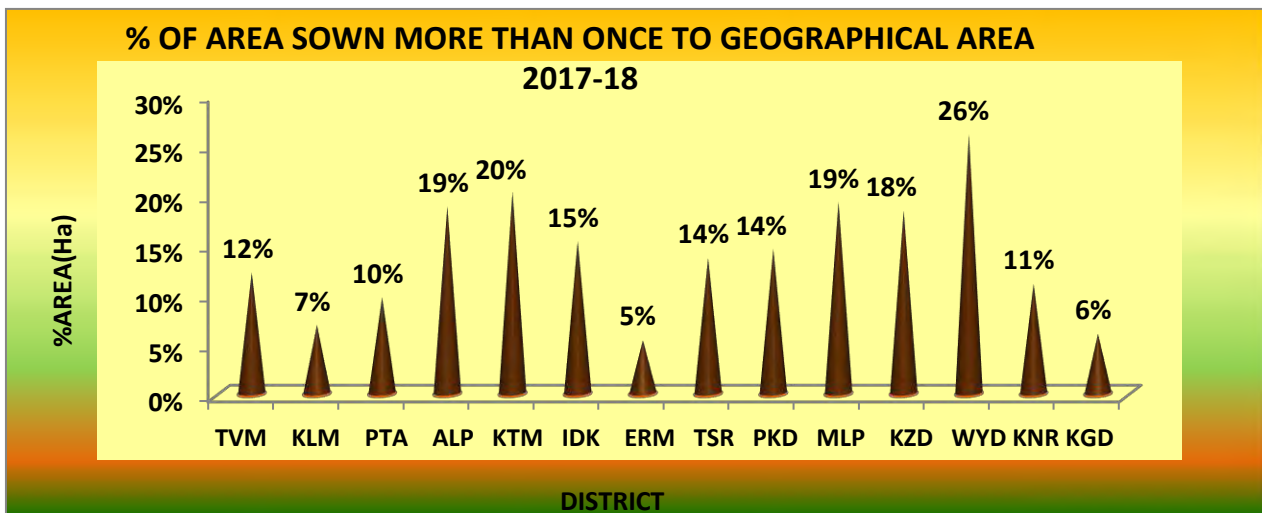

Total Cropped Area (Gross Area Sown)

The gross area sown represents the total area cultivated under all food and non-food crops including the area sown more than once during the year 2017-18. According to this concept the area under various crops in the same plot can be more than the actual area. The gross area sown during 2017-18 was 25,79,699 Ha against 25,84,007 Ha in 2016-17. The gross area is slightly decreased by 0.17 % over the previous year.

Area Sown more than once

This represents the difference between the gross area sown under all crops and the net area sown during the agricultural year. The area sown more than once during 2017-18 is 5,39,284.44 Ha as against 5,68,525.198 Ha in 2016-17.

Due to mixed cropping pattern, the availability of irrigation facilities and other measures of intensification of agriculture, there is a considerable increase in the double or multiple cropped area. In order to assess the trends in intensity which is the ratio of total cropped area to the net cropped area, the cropping intensity is calculated. On analysing the years from 2001-02, the cropping intensity is maximum in 2005-'06.

The following graph shows the Net Area Sown for the last 10 years. The sown area is decreasing

A BRIEF ANALYSIS OF THE AREA OF IMPORTANT CROPS FOR 2017-18

Agricultural crops in the state are broadly classified as food crops and non-food crops. Food crops are cereals & millets, pulses, sugar crops, spices & condiments, fresh fruits, vegetables, etc. The major non-food crops are rubber, betel leaves, lemon grass, etc. Another classification of crops is seasonal crops, annual crops and perennial crops which are based on their life time.

Seasonal crops: Paddy, pulses, tapioca, vegetables, sweet potato, tubers, groundnut, ginger, turmeric, cotton, tobacco, onion, tur, etc.

Annual crops: Sugarcane, banana, plantain, pineapple, betel leaves, etc.

Perennial crops: Coconut, arecanut, cashew, mango, jack, tamarind, pepper, rubber, tea, coffee, cardamom, cloves, nutmeg, cinnamon, cocoa, papaya, etc.

Food Grains

Paddy, Pulses and Grains include the category of food grains. The total area under cultivation of food grains during 2017-18 is 196583 Ha. During 2017-18 the area of food grains increased by 13.38% as against the year 2016-17.

Paddy:

Paddy is cultivated in three seasons in all the districts of Kerala except Wayanad district. In Wayanad there is no autumn paddy cultivation. The area under paddy cultivation in the state is decreasing year by year. Area of paddy is collected in three seasons and its area is estimated even in panchayath level. Upland cultivation of paddy is the new change in Kerala.

The total paddy area during the year 1961-'62, was 7.53 lakh hectares and in 1975-'76 it was 8.76 lakh hectares. Thereafter a steady decrease in paddy cultivation was observed and it reached to 2.29 lakh hectares during the agricultural year 2007-08. But in 2008-09, area of paddy cultivation increased to 2.34 lakh hectares. The area of paddy cultivation decreased by 77.83 % during the year 2017-18 as compared to that of year 1975-76.

From this year onwards area of paddy is the totality of wet land paddy area and dry land paddy area. We consider dry land paddy area due to the growing importance of dry land paddy cultivation.

Season wise area under paddy(excluding dry paddy) from 2000-01 to 2017-18

- The area under paddy cultivation in Kerala during the agricultural year 2017-18 is 1,94,235 Ha
- It is increased by 22,837 Ha than the previous agricultural year 2016-17.
- There is 5,149.14 Ha dry land paddy cultivation in Kerala during 2017-18
- On comparing with 2001-02, 46% of paddy area decreased during 2017-18
- On analyzing the area of last 10 years, paddy cultivation is high during the agricultural year 2008-09 and the area is 2,34,265 Ha.
- Paddy accounted 7.33% of the total cropped area in the state during 2017-18.

A BRIEF ANALYSIS ON THE PRODUCTION OF
IMPORTANT CROPS FOR 2017-18

Factors such as fertility of land, monsoon behaviour, rainfall, irrigation, application of fertilizers, climatic conditions, marketing facilities, prices, availability of agricultural labourers etc determine the area and productivity of any crop. The yield estimates of major crops are obtained through the scientifically designed crop cutting experiments (CCE) conducted under General Crop Estimation Survey. During the year 73,759 Crop Cutting Experiments were conducted for estimating the production of different crops.
