## PREFACE

Ministry of Agriculture and Farmers Welfare, Government of India is implementing the scheme on Improvement of Agriculture Statistics for the purpose of collecting crop statistics from all states in India. In this connection, in Kerala , the Scheme Establishment of an Agency for Reporting Agricultural Statistics , a sub component of the main scheme on Improvement of Agriculture Statistics is implementing for the collection of crop statistics . It is a 100% Central Sector Scheme. In order to collect crop statistics, two sample surveys viz. Land Utilization Survey and General Crop Estimation Survey are being conducted under the EARAS Scheme.

The report on ‘Agricultural Statistics’ is one of the important annual publications of the Department of Economics and Statistics. This report presents the data relating to crop statistics for the year 2016-17, which is collected under the scheme on Establishment of an Agency for Reporting Agricultural Statistics (EARAS). The data relating to land use (Thirteen way classifications), area under crops, crop production, yield rate, irrigation statistics, comparative study of important crops in Kerala for the year 2001-02 & 2016-17, block-wise area and production of important crops etc. are included in this report. Farm wholesale prices of important crops, rainfall during the year 2016-17, district wise value of major agricultural crops for the year 2014-15 & 2015-16 (Provisional) are also included.

This report was prepared by the EARAS Division of the Directorate of Economics and Statistics. I hope this report will be much useful to those engaged and interested in Agricultural Sector, Planners, Administrators, Research scholars, etc.

Suggestions for the improvement of the content of the report will be highly appreciated.

## **INTRODUCTION**

*The report “Agricultural Statistics” is annually published by the Department of Economics and Statistics which contains the estimates of area of crops, land utilization pattern, crop production and other major aspects of agricultural sector in Kerala. Initially, the data collected through land utilization survey was used for the preparation of Agricultural statistics. But the data collected and estimates prepared were inadequate on account of the small sampling frame and limited coverage. With a view to obtain more comprehensive data on Agricultural Statistics in non-reporting states like Kerala, West Bengal and Orissa, Government of India sponsored a scheme namely ‘Establishment of an Agency for Reporting Agricultural Statistics (EARAS)’. In Kerala, the scheme is being implemented by the Department of Economics and Statistics from 1975-'76 onwards. Originally, the scheme was intended to collect Agricultural Statistics from 20 % of the selected villages in each year in a phased manner and covering the entire state within 5 years. EARAS scheme was revised in 1987-'88 with a view to prepare district level estimates with breakup for Block/ Municipality/ Corporation. Further, during 1993-'94, the Investigator Zones were re-organized by suiting the villages to Panchayats. From 2000-'01 onwards, the part panchayats were discontinued and each Investigator Zone was formed with full panchayat/ panchayats.*

*The area under the crops and yield rate of the crops are the most vital components in the estimation of crop production. The area statistics are collected through the Area Enumeration Survey and the yields of crops are collected through the General Crop Estimation Survey conducted under the EARAS scheme.*

### **Sampling Design**

*Stratified multistage random sampling method is followed in the survey. The C.D.Block / Municipality (Municipalities with an area of less than 10 square km are merged with the adjoining Blocks) / City Corporation is treated as a stratum. The Blocks are divided into a number of Investigator Zones depending on the area of the block and nature of land. City Corporation is divided into three Investigator Zones. Each Municipality having an area of 10 square km or more is treated as a single Investigator Zone. The Investigator Zones within the stratum form the first stage of sampling units. Clusters within each selected Investigator Zone form the second stage units and the survey number of plots within each selected cluster forms the ultimate of sampling units.*

### **Sampling Size**

*In each Investigator Zone, 100 clusters are allocated among the dry lands and wet land in proportion to the area under these categories in the zone. 100 survey / subdivision numbers are selected from the Basic Tax Register by using circular systematic random sampling method. These are the key plots for cluster formation.*

*Investigators identify the survey number of the key plots and 4 or more survey numbers / subdivision numbers adjacent to the key survey number (clubbed survey numbers, if the area of survey numbers are small) as per the Instruction Manual of the survey. Wet and dry land clusters are enumerated separately. Wetland clusters are enumerated in all three seasons - autumn, winter and summer and dry land plots are enumerated at least two times for area enumeration during the agriculture year.*

*The area under the crops of each season, annual, perennial and horticulture crops etc., land utilization details, irrigation particulars, etc. are collected by the investigators at the time of area enumeration. Simultaneously, Investigators select and conduct crop-cutting experiments of all major crops and the selected minor crops for the estimation of yield rates and production of the respective crops.*

*The data on mean yield of crops thus obtained are provided to the National Agriculture Insurance Company for assessing the crop damages of the selected crops in the respective seasons and to pay compensation to the concerned farmers for the insured crops under the Modified National Agricultural Insurance Scheme (MNAIS).*

## LAND USE PATTERN

*The total geographical area of the State is 38,86,287 Ha.*

*The net area under cultivation during the year 2016-17 was 20,15,482 Ha.*

*The total cropped area during the year 2016-17 was 25,84,007 Ha.*

In Kerala, the Geographical area has been classified according to thirteen different uses of land which is presented in Table A

**1. Forest:** Forest represents all actually forested area as the lands classed or administered as forest under any legal enactment dealing with forest. The forest area of the State during 2016-17 was 10,81,509 Ha which is 27.83% of the total geographical area of the State. Idukki district with an area of 1,98,413 Ha under forest (18.35%) is the highest among districts in the State.

**2. Land put to Non-Agricultural use:** The land put to use for purposes other than agriculture such as building, pathways, roads, canals, rivers, bus stands, railways, local reservoirs, swamps etc. are brought under this category. Area under this classification is 4,41,934Ha accounting for 11.37% of the State's geographical area. In Malappuram district about 51678 Ha (11.69%) put into non-agricultural uses is the highest followed by Palakkad district with an extent of 50,662 Ha (11.46%).

3. **Barren and uncultivable land**: Land which cannot be brought under cultivation unless at a high cost, whether such a land is in isolated blocks or within cultivated holdings, such as mountains, deserts, hills etc are classified as barren and uncultivable land.

The total land comes under this category is 11780 Ha which represents 0.30% of the total geographical area of the State. Kasaragode district alone accounted for 3,556 Ha which is 30.19% of the state's barren and uncultivable land.

4. **Permanent pastures and other grazing land:-** All grazing lands, whether they are permanent pastures or meadows are considered as permanent pastures and other grazing lands. No area falls under this category in 2016-17.

5. **Land under miscellaneous tree crops** :-All cultivable lands, which is not included under net area sown, but is put to some agricultural use such as land under casuarina trees, thatching grass bamboo bushes and other groves for fuel etc. come under this category. Out of the total geographical area, land under miscellaneous tree crops and groves are not included in the net area sown and it occupies only 2450 Ha (0.06%)

6. **Cultivable waste** : These include land available for cultivation but not taken up for cultivation or abandoned after a few years for one reason or the other . Such lands may be either fallow or covered with shrubs and jungles, which are not put to any use. They may be assessed or unassessed and may lie in isolated blocks or within cultivate holdings. Lands once cultivated but remaining uncultivated for five years or more in succession shall also be included in this category. The total area under cultivable waste during 2016-17 is 101379 Ha ie, 2.61 % of the total geographical area of the State. The area under this category is highest in Palakkad district accounting 23,284 Ha.

7. **Fallow other than current fallow** : Land which were taken up for cultivation but have been temporarily put off cultivation for a period of not less than one year but not more than five years due to abject poverty of the cultivators, inadequate supply of water, silting of canals and rivers etc are treated as other fallow land. The total area under other fallow land during 2016-17 accounts 55,530 Ha which is 1.43% of the total geographical area. The land under this category was highest in Palakkad district with 16,155 Ha followed by Ernakulam district with 8,031 Ha.

8. **Current fallow** : Land that are kept fallow off out of the net area sown during the previous year are classified as current fallow for the reporting year. The area under this category during 2016-17 is 72,008 Ha., which is 1.85% of total geographical area.

9. **Marshy land** : Land which gets permanently or periodically inundated by water and characterized by vegetation which includes grasses and weeds. Out of the total

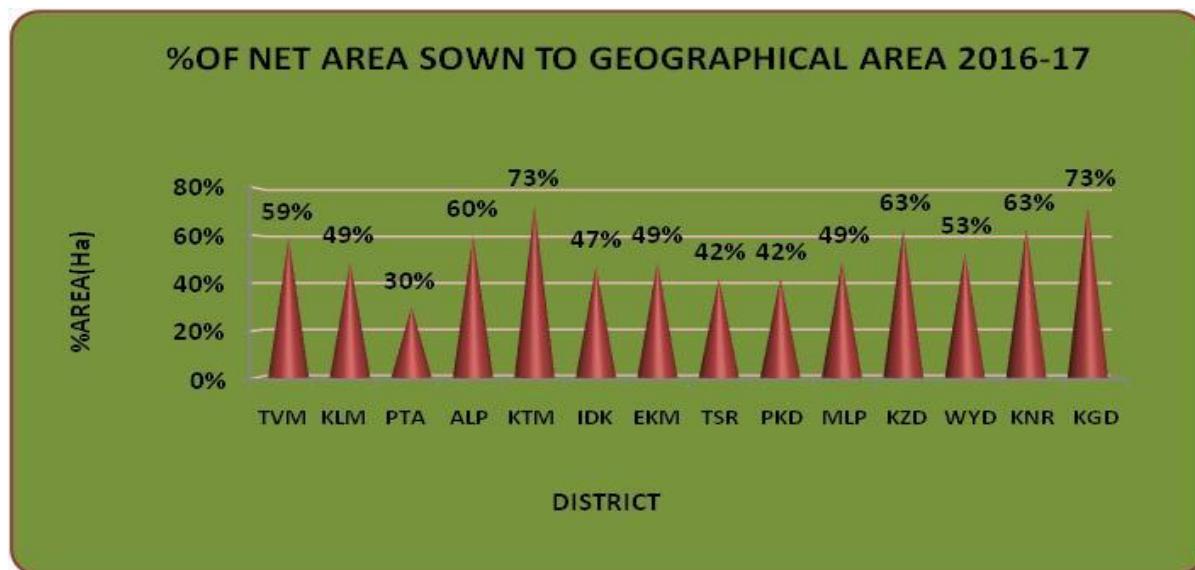

geographical area only 106 Ha come under marshy land during the year 2016-17. Kannur district with 95 Ha ranked first contributing 89.62 % to the total marshy land of the State.

10. **Still water**: The land under still water is broadly the land occupied by water bodies like rivers, lakes, ponds, reservoirs, backwater, canals, tanks including nature made deeps in which water stands still for most part of the period. This is the land on which there is no vegetative growth of any kind. Out of the total geographical area, 98343 Ha of land is under still water constituting 2.53 %. The land under still water is highest in Palakkad district and the area is 15,333 Ha.

11. **Water logged area** : It is the land where water is at / near the surface and stands for most part of the year. It is generally found in low -lying areas and it excludes lakes, ponds and tanks. The total water logged area for the year 2016-17 is 3,210 Ha. It is 0.08% of the total geographical area of the State.

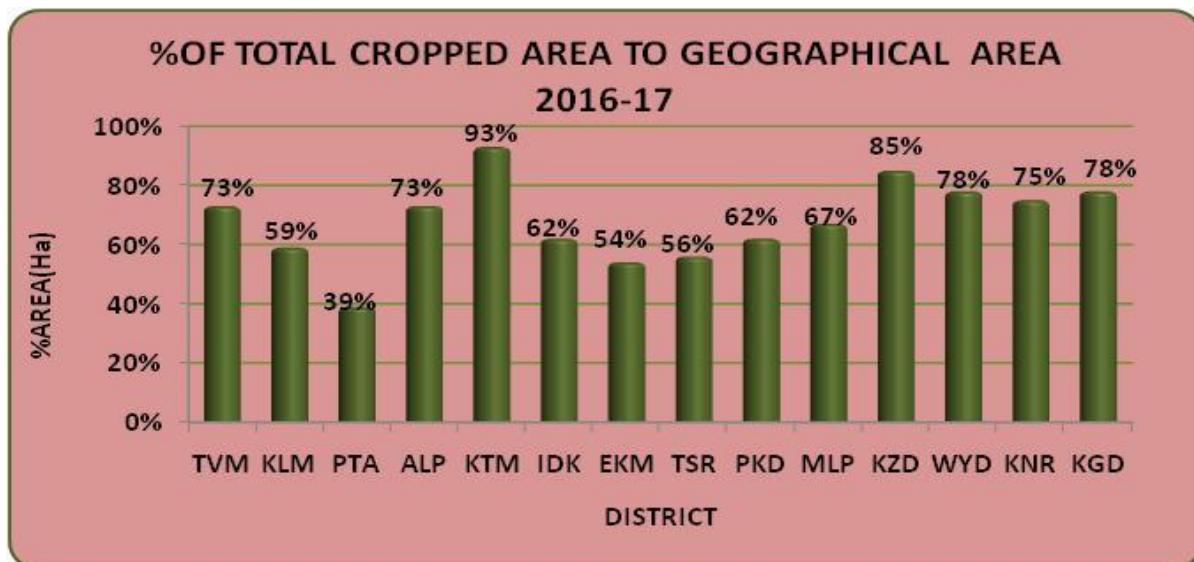

12. **Social Forestry** : The land under social forestry is the land in which the trees are planted by the side of railway lines, road side, river and canal banks with a view to meet the fuel and the fodder needs of the rural population and to serve the broader goals of soil conservation and provision of shed and shelter for crops. It also includes village forests/plantation which is being used by common man. An extent of 2,556 Ha of land comes under social forestry. The land under social forestry is highest in Idukki district and it is 1,142 Ha (44.68%) followed by Palakkad district 380 Ha (14.87%).

13. **Net Area Sown**: In calculating the net area sown, area sown more than once will be counted only once. Area cultivated during any part of the agricultural year should come under net area sown. Out of 38,86,287 Ha of total geographical area, 20,15,482 Ha of land constituting 51.86% is cultivated once with various crops during the year 2016-17. There is a slight decrease of 0.38% in net area sown from the previous year.

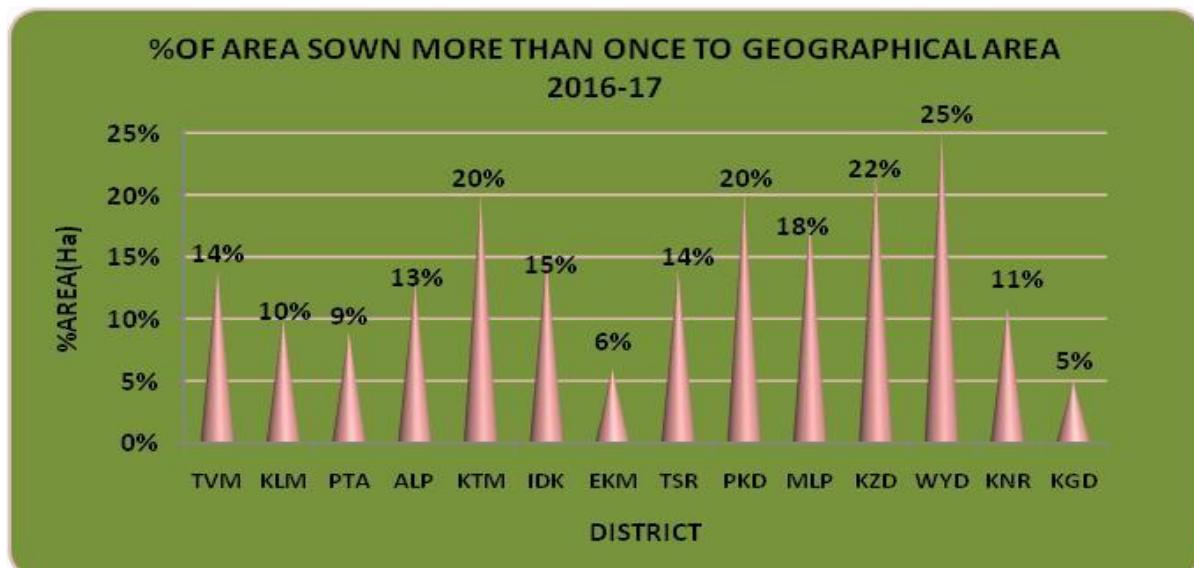

### Total Cropped Area (Gross Area Sown)

The gross area sown represents the total area cultivated under all food and non-food crops including the area sown more than once during the year 2016-17. According to this concept the area under various crops in the same plot can be more than the actual area. The gross area sown during 2016-17 was 2584007.198 Ha against 2627577 Ha in 2016-17. The gross area is decreased by 1.66% over the previous year.

### Area Sown more than once

This represents the difference between the gross area sown under all crops and the net area sown during the agricultural year. The area sown more than once during 2016-17 is 5,68,525 Ha as against 6,04,504 Ha in 2015-16.

16	2016-17	2584007	2015482	128.21

In order to assess the trends in intensity which is the ratio of total cropped area to the net cropped area, the cropping intensity is calculated. On analysing the years from 2001-02, the cropping intensity is maximum in 2005-'06.

### **A BRIEF ANALYSIS OF THE AREA OF IMPORTANT CROPS FOR 2016-17**

Agricultural crops in the state are broadly classified as food crops and non-food crops. Food crops are cereals & millets, pulses, sugar crops, spices & condiments, fresh fruits, vegetables, etc. The major non-food crops are rubber, betel leaves, lemon grass, etc. Another classification of crops is seasonal crops, annual crops and perennial crops which are based on their life time.

**Seasonal crops:** Paddy, pulses, tapioca, vegetables, sweet potato, tubers, groundnut, ginger, turmeric, cotton, tobacco, onion, tur, etc.

**Annual crops:** Sugarcane, banana, plantain, pineapple, betel leaves, etc.

**Perennial crops:** Coconut, arecanut, cashew, mango, jack, tamarind, pepper, rubber, tea, coffee, cardamom, cloves, nutmeg, cinnamon, cocoa, papaya, etc.

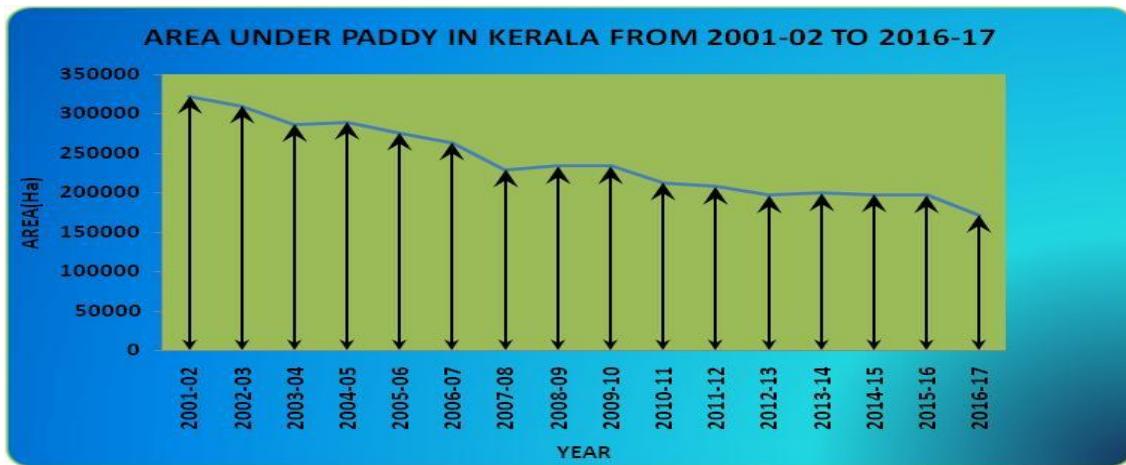

#### **Food Grains**

Paddy, Pulses and Grains include the category of food grains. The total area under cultivation of food grains during 2016-17 is 1,73,386 Ha. The area of food grains decreased by 13.72% during 2016-17 from the year 2015-16. Also comparing with 2001-02 total area under food grains decreased by 49%.

#### **Paddy:**

Paddy is cultivated in three seasons in all the districts of Kerala except Wayanad district. In Wayanad there is no autumn paddy cultivation. The area under paddy cultivation in the state is decreasing regularly. Area of paddy is collected in three seasons and its area is estimated even in panchayath level. Upland cultivation of paddy is the new change in kerala.

The total paddy area during the year 1961-'62, was 7.53 lakh hectares and in 1975-'76 it was 8.76 lakh hectares. Thereafter a steady decrease in paddy cultivation and reached to 2.29 lakhs hectares during the agricultural year 2007-08. But in 2008-09, area of paddy cultivation was increased as 2.34 lakh hectares. On comparing with the year 1975-76, area of paddy cultivation has decreased 80.43% during the year 2016-17.

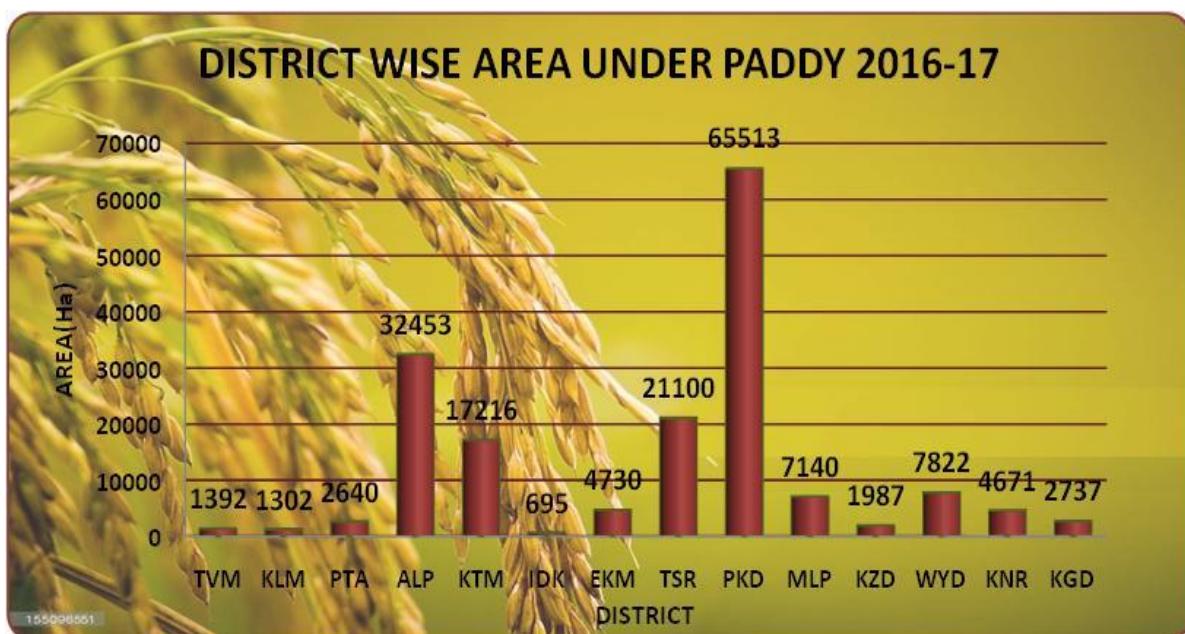

- The area under paddy cultivation in Kerala during the agricultural year 2016-17 is 1,71,398 Ha
- It is decreased by 25472 Ha (12.94%) than the previous agricultural year 2015-16 where as the variation was only 0.65% in the year 2015-16 comparing with 2014-15. Besides, the production of rice is very low during 2016-17, since draught has intensively affected all over the state.
- There is 5214.3 Ha dry land paddy cultivation in Kerala during 2016-17.
- On comparing with 2001-02, 46.8% of paddy area decreased during 2016-17
- On analyzing the area of last 10 years, paddy cultivation is high during the agricultural year 2008-09 and the area is 2,34,265 Ha.
- Paddy accounted 6.63% of the total cropped area in the state during 2016-17.

**A BRIEF ANALYSIS ON THE PRODUCTION OF  
IMPORTANT CROPS FOR 2016-17**

Factors such as fertility of land, monsoon behaviour, rainfall, irrigation, application of fertilizers, climatic conditions, marketing facilities, prices, availability of agricultural labourers etc determine the area and productivity of any crop. The yield estimates of major crops are obtained through the scientifically designed crop cutting experiments (CCE) conducted under General Crop Estimation Survey. During the year the state has been conducting 74,383 Crop Cutting Experiments for estimating the production of crops.

# Production in Million Nos.

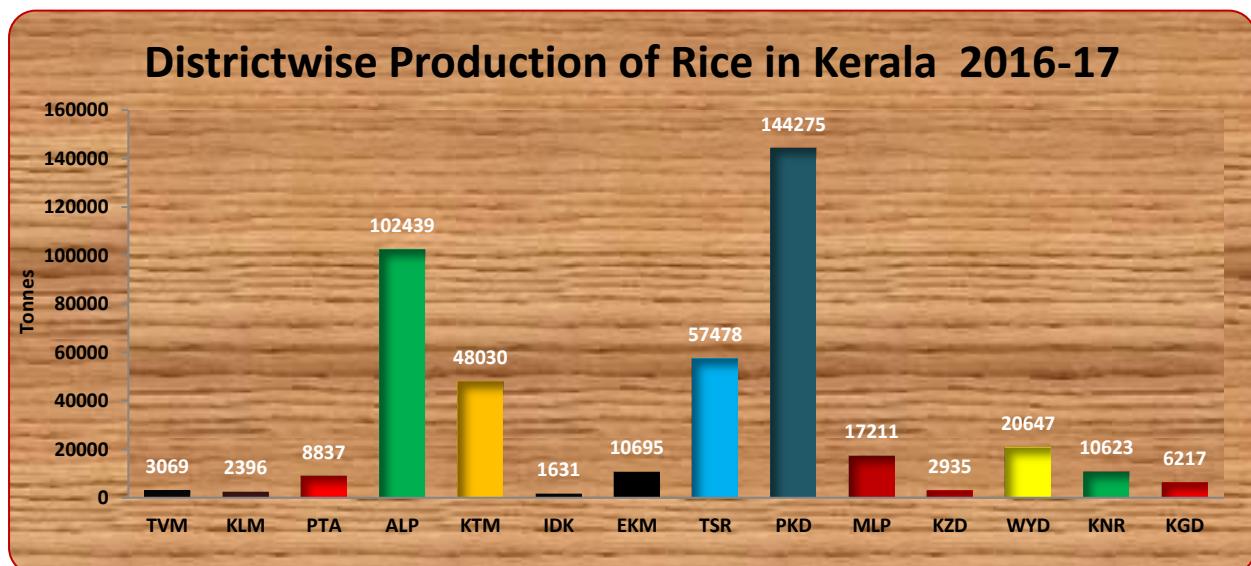

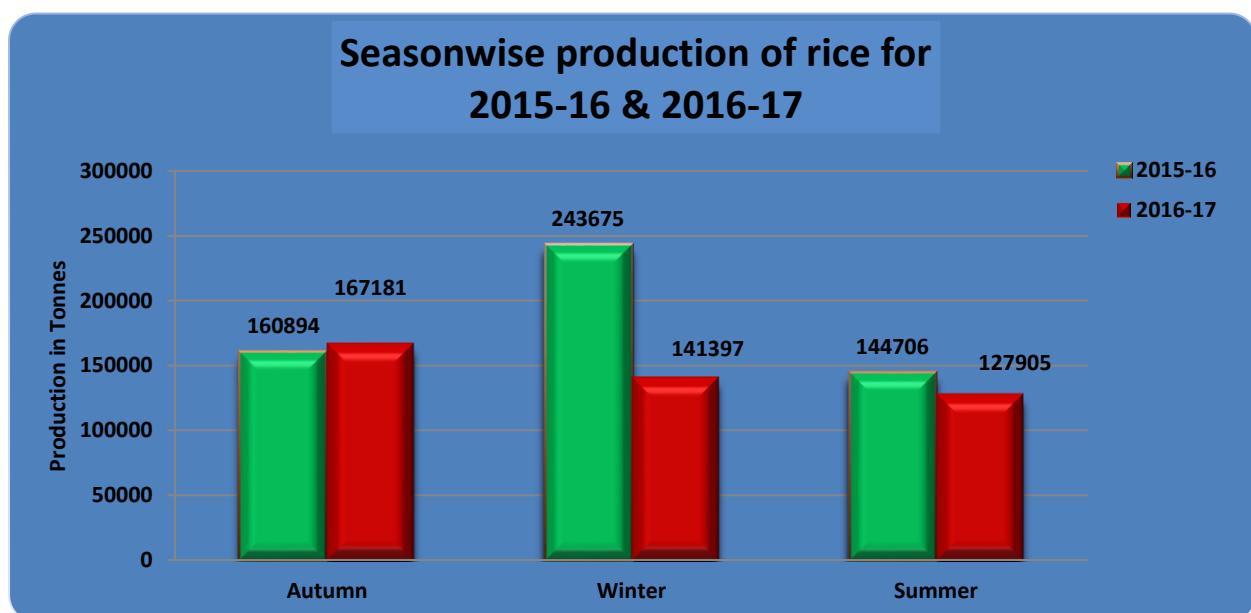

The production of food grains during the year under report is 4,36,703tonnes as against 5,49,557tonnes in 2015-16 recording a decrease of 1,12,854tonnes (-20.54%) rice is major constituent accounting for almost 100% of food grain production in the state. During 2016-17 the production of rice is very low on comparing with the last five years series of data. Drought has intensively affected in the year 2016-17, mainly in Palakkad district. And also the production of major crops like Coconut, Areca nut, Tapioca, Banana, Pepper, Ginger, Turmeric etc. has been decreased due to drought in this year, comparing to the previous year. Crop wise production of food grain is given in the following table.

### **Paddy**

Paddy is the principal crop extensively cultivated in all the districts of the state having a unique three season pattern viz Autumn (July- October), Winter (November – February) and Summer (March – June). The production of rice decreased from 5,49,275 tonnes to 4,36,483 tonnes over the previous year which shows a decrease of -20.54%. During the year drought is intensively effected all over the state especially in palakkad district during the year 2016-17. The yield rate of rice is 2547kilogram/hectare against the previous years of 2790 kilogram/hectare. The productivity of rice in autumn, winter and summer seasons were 2954, 1957, 3006 respectively. The productivity of rice in autumn season was highest in Alappuzha district and lowest in Pathanamthitta district. In winter the highest productivity is in Pathanamthitta district and lowest is in Kozhikode district. In summer season the productivity was highest in Malappuram district and the same was lowest in Kollam district. As usual, Palakkad district occupied the first position in the production of rice and lowest in Idukki district. The season wise area, production and productivity of rice are furnished below.

## Coconut

Coconut is a perennial crop, generally grown all over the state. Production of coconut is concentrated specifically in Malappuram district followed by Kozhikkode. The lowest production is in Idukki district. Area, production and productivity of coconut show a decreasing trend.

Year	Production of coconut in Million nuts	Yield rate of coconut in Nos/ha
