

Government of Kerala

ANNUAL VITAL STATISTICS REPORT 2006

*Department of Economics & Statistics
Thiruvananthapuram
August 2008*

PREFACE

The report presents the Vital Statistics of Kerala for the year 2006 on the basis of data collected under the revamped system of Civil Registration implemented in the State as a part of all India pattern. This is the seventh report based on the revamped system. The data relating to vital events received from the registering authorities are presented and vital rates are estimated.

The report is prepared by the Vital Statistics Division of the Directorate under the guidance of Sri.D.Rajan, Additional Chief Registrar of Births & Deaths and Additional Director. I acknowledge the efforts put in by Smt. S Leelamony, Deputy Director, Smt. K.Shailamma, Assistant Director, Smt.P.K.Neena, Research Assistant, Sri.V.K.Baburaj and Sri.Praveen, Statistical Assistants in the preparation of this report.

I would like to place on record the co-operation and valuable services rendered by Local Registrars, District Registrars, Deputy Directors and staff in the District Statistics Offices to make this venture a success.

I hope that this report is of great help to Planners & Administrators and those engaged in the field of Health and Demography.

Suggestions for the improvement of the publication are always welcome.

Thiruvananthapuram,
14.08.2008

CONTENTS

Item	Title	Page No.
I	Introduction and Analysis	4-15
II	Tables	
1	Live Births By Place of Occurrence, Districts (Rural & Urban) and Towns with Population One Lakh and Above	16-17
2	Time Gap in Registration of Live Births (Rural & Urban)	18
3	Live Births by Sex and Month of Occurrence	19-20
4	Live Births by Type of Attention at Delivery (Rural & Urban)	21-22
5	Live Births by Method of Delivery and Type of Institution for Institutional Births (Rural & Urban)	22
6	Live Births by Age of the Mother and Birth Order (Rural & Urban)	23-24
7	Live Birth by Birth Order and Age of Mother for Towns with Population 1 Lakh and above	24
8	Live Births by Age and Level of Education of Mother (Rural & Urban)	25
9	Live Birth by Level of Education of Father and Birth Order (Rural & Urban)	26
10	Live Birth by Level of Education of Mother and Birth Order (Rural & Urban)	27
11-a	Live Birth by Age of Mother and Birth Order for each Level of Education of the Mother (Rural)	28-30
11-b	Live Birth by Age of Mother and Birth Order for each Level of Education of the Mother (Urban)	31-33
12-a	Live Birth by age of Mother, Birth Order and Religion of the Family (Rural)	34-36
12-b	Live Birth by age of Mother, Birth Order and Religion of the Family (Urban)	37-39
13	Live Birth by Occupation of Father and Birth Order (Rural & Urban)	40-41
14	Live Birth by Occupation of Mother and Birth Order (Rural & Urban)	42-43
15	Live Birth by Duration of Marriage of the Mother and Birth Order (Rural & Urban)	44
16	Live Birth by Duration of Marriage and Age of Mother (Rural & Urban)	45
17	Live Birth by Duration of Pregnancy and Birth Weight (Rural & Urban)	46
18	Live Birth by Age of Mother & Birth Weight (Rural & Urban)	46
19	Live Birth by Birth Order & Birth Weight (Rural & Urban)	47
20	Live Births by Method of Delivery and Age of the Mother (Rural & Urban)	48
21	Deaths by Place of Occurrence, Districts (Rural & Urban) and Towns with population One Lakh and above	49-50
22	Time Gap in Registration of Deaths (Rural & Urban)	51

23	Deaths by Sex and Month of Occurrence	52-54
24	Deaths by Type of Attention at Death (Rural & Urban)	55-56
25	Deaths by Age, Sex and Religion of the Deceased (Rural & Urban)	57-58
26-a	Deaths by Age, Occupation and Sex (Rural)	59-60
26-b	Deaths by Age, Occupation and Sex (Urban)	61-62
26-c	Deaths by Age, Occupation and Sex (All Areas)	63-64
27	Deaths by Cause of Death, Age and Sex for all Deaths Medically Certified or Not	65-71
28	Deaths by Cause of Death, Age and Sex for Medically Certified Deaths	72-78
29	Infant Death by Place of Occurrence, Districts (Rural & Urban) and Town with Population 1 Lakh & Above	79-80
30	Infant Deaths by age and Sex (Rural & Urban)	81
31	Pregnancy Related Deaths by Age Group of the deceased and Cause of Death for Medically Certified Deaths (Rural & Urban)	82-84
32	Pregnancy Related Deaths by Age Group of the deceased and Cause of Death for all Deaths Medically Certified or not (Rural & Urban)	85-88
33	Pregnancy Related Deaths by Age and Occupation (Rural & Urban)	89-90
34-a	Deaths by Selected Cause of Death, Age, Sex and Habit (Rural)	91-113
34-b	Deaths by Selected Cause of Death, Age, Sex and Habit (Urban)	114-130
34-c	Deaths by Selected Cause of Death, Age, Sex and Habit (All areas)	131-142
35	Still Birth by Place of Occurrence in District (Rural & Urban)	143
36	Stillbirth by Sex and Age of Mother (Rural & Urban)	144
37	Stillbirth by Sex and Duration of Pregnancy (Rural & Urban)	144
38	Stillbirth by Sex and Type of Medical Attention Received at Delivery (Rural & Urban)	145-146
39	Stillbirths by Cause of stillbirths and Age of Mother (Rural & Urban)	147-148
40	Stillbirths by Duration of Pregnancy and Age of Mother	149

ANNUAL VITAL STATISTICAL REPORT – 2006

Introduction

Civil Registration System is a continuous, permanent and compulsory recording of the occurrence and characteristics of vital events. The registration records are primarily useful for their value as legal documents and secondarily as a source of Vital statistics. The scheme is aimed at providing the key indicators for analysing the health trends of the population in a scientific manner. The size and geographical distribution of births, deaths, infant deaths, maternal deaths etc., are of immense value to the public health planners, administrators, medical professionals, epidemiologists and research workers.

The registration of births and deaths are being done under the legal provisions of Registration of Birth and Death (RBD) Act 1969 came into force in Kerala on 1st April 1970. Director of Panchayaths is the Chief Registrar of Birth and Deaths in Kerala and is the Chief executive authority for implementing the provisions of the Registration of Birth and Death Act. Chief Registrar will be assisted by a Deputy Chief Registrar. The Additional Director of Economics and Statistics is designated as the Additional Chief Registrar of Births and Deaths. A Deputy Chief Registrar, Deputy Director of Economics and Statistics, assists him. Actual work of the legislation is being done by the local registrars of births and deaths appointed under this act. At the District level, the District Panchayaths Officer, secretaries of municipalities and corporations are empowered as the District Registrar of Births and Deaths.

The Secretaries of Grama Panchayaths, health inspectors and health officers of Municipalities and Corporations and the executive officer of Kannur Cantonment are the local Registrar of the concerned registration units.

This report is prepared on the basis of place of occurrence of events. Here we use the district wise data only not unit wise. Analysing the data in this manner we can find the population trend in geographically.

Conceptual and Empirical Frame Work

As per the R B D Act, births and deaths are to be registered within 21 days after the occurrence of the events at the place of occurrence. The details such as date of event, date of registration, sex and the details of father and mother such as their age, religion, literacy, occupation, order of birth etc of each event are recorded in the registers at the time of registration. These details are carried over to the prescribed birth, death and stillbirth cards and are forwarded to the Deputy Directors of the Districts Offices of Economics and Statistics Department. Soft copy of the same is forwarded to Directorate for further processing.

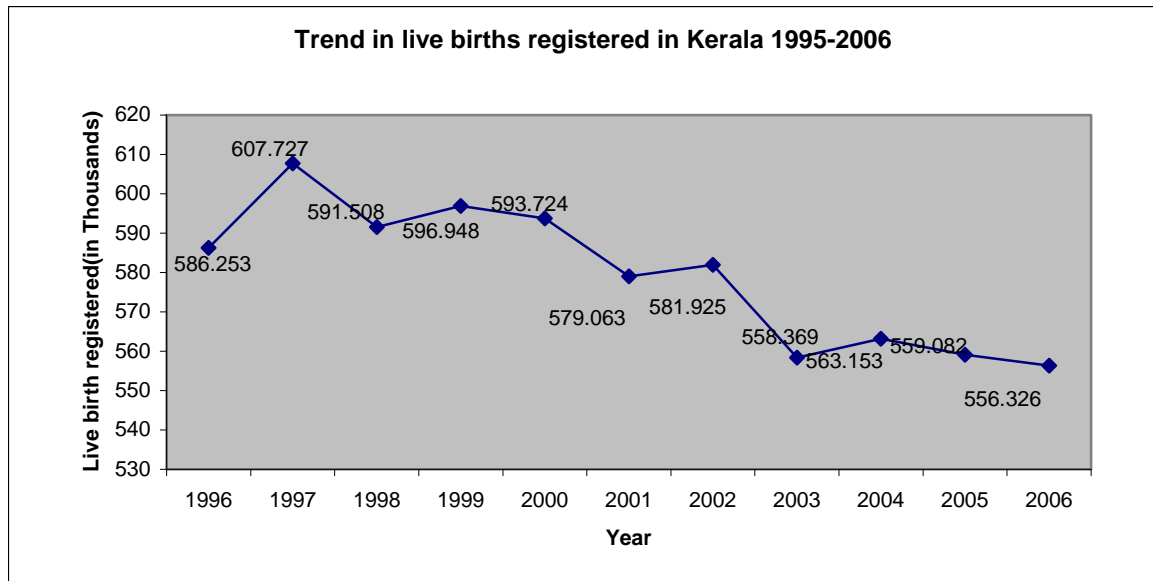

Limitations of the data

In terms of level of registration Kerala has recorded cent percent registration in births and 99.5 percent in deaths. Even though some of the vital events were seen un registered. This is mainly due to lack of awareness about the need and importance of registration of births and deaths and lack of registration procedure knowledge among the public. This may adversely affect the quality of the statistical data. Efforts are being taken to create mass awareness about the importance and necessity of registration.

Analysis and findings

The data and the vital rates in the reports are arrived on the basis of place of occurrence of the events. The criteria for including an event is the year of registration. By using this method the number of live birth occurred during 2006 is found to be 5.56 lakhs as against 5.59 lakhs registered during 2005. Out of which 2.15 lakhs were reported from rural areas and 3.41 lakhs from urban areas. Of the total live births 51% were male, 48% were females and for the remaining 1% sex were not reported. The number of registered live births decreased from 5.59 lakhs in 2005 to 5.56 lakhs in 2006.

Trend in no of live births registered in the state for the last 10 years is shown below.

The birth rate of the state during 2006 is 16.63. On analysis it is observed that the highest birth rate 21.79 was recorded in Malappuram district followed by Kozhikkode(18.81) and the lowest in Alappuzha district (11.96) followed by Idukki (13.9) .These data are furnished in table 1.

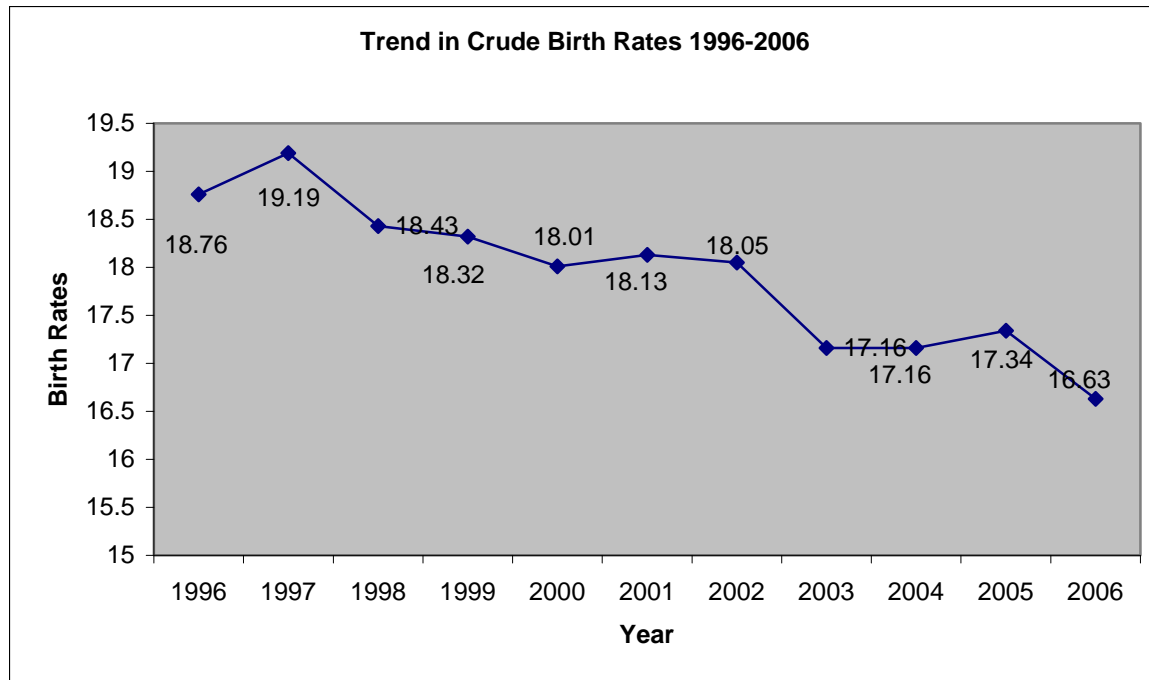

Table 2 reveals that out of 556326 live births registered during the year 2006, 68137 were delayed registrations. It is observed that 13423 live births were registered after one year from the date of occurrence.

On analyzing the month wise registration details it is seen that the highest number of live birth was registered during May (9.25%) followed by June (8.83%), March (8.79%) and July (8.68%). These details are given in Table 3.

Table 4 presents the distribution of live birth by type of medical attention received at the time of delivery. It is seen that about 90% of the total live birth were institutional in nature. Another feature observed is that inspite of having enough modern medical facilities across the state, 14336 live births occurred were attended by the un trained persons/relatives.

Distribution of live births by age of mother and type of delivery are furnished in table 5. The data reveals that the highest number of live births occurred were from the mothers belonging to the age group 20-24 (40.03%). Followed by the age group 25-29(36.05%) and there after it declined gradually with age. It is observed that 6.38% of live births occurred were from mothers of age group 15-19. It reveals that proportion of girls getting married before 18 years of age is not negligible. Percentage of live birth is less than 1% in the case of mothers in the age group 40&above. In terms of method of delivery, 63.10% of the cases were natural and 32.45% caesarean. Based on the total delivery cases pertaining to the mother's age group highest percentage of caesarean cases were observed in the age group 40-44 and lowest in below 15.

The percentage distribution of live births by birth order is furnished in table 6. It shows that the highest percentage of live birth is of first order (47%) followed by second order of birth (38%) and there after it gradually declined for higher birth orders.

Birth weight of about 50 % of the live birth pertaining to the mothers in the age group 20-24 was 2-3 Kg and that of 47% was 3-4 Kg. As the highest number of Live Births was reported from the mothers in the age group 20-24, major share of the births falls in the category of the birth weight 2-3 kg.

In terms of the duration of pregnancy period 40 % of the live birth occurred after completing the period of 37-39 weeks. Out of the total births occurred about 46 % were reported from the Hindu religion, 35% from Muslims, 17% from Christians and the remaining from other categories.

The percentage distribution of live births by level of education of father and mother are given in the tables 9 and 10. The tables show that lowest percentage of live births was reported from illiterate fathers and mothers. The percentage of live births was the highest for the fathers and mothers with literacy level “matric but below graduate” and there after decline gradually with increase in levels of education.

The number of registered deaths and crude death rates are presented in table 21. Deaths occurred during the year 2006 found as 2.19 lakhs as against 2.04 lakhs registered during the year 2005. The highest number of deaths was reported from Thiruvananthapuram district followed by Thrissur and the lowest from Kasargode district. Pathanamthitta district stood at the first position with death rate 7.96 and Malappuram in the last with 4.35.

Trend in Crude Death Rates in the state for the last 10 years is shown below.

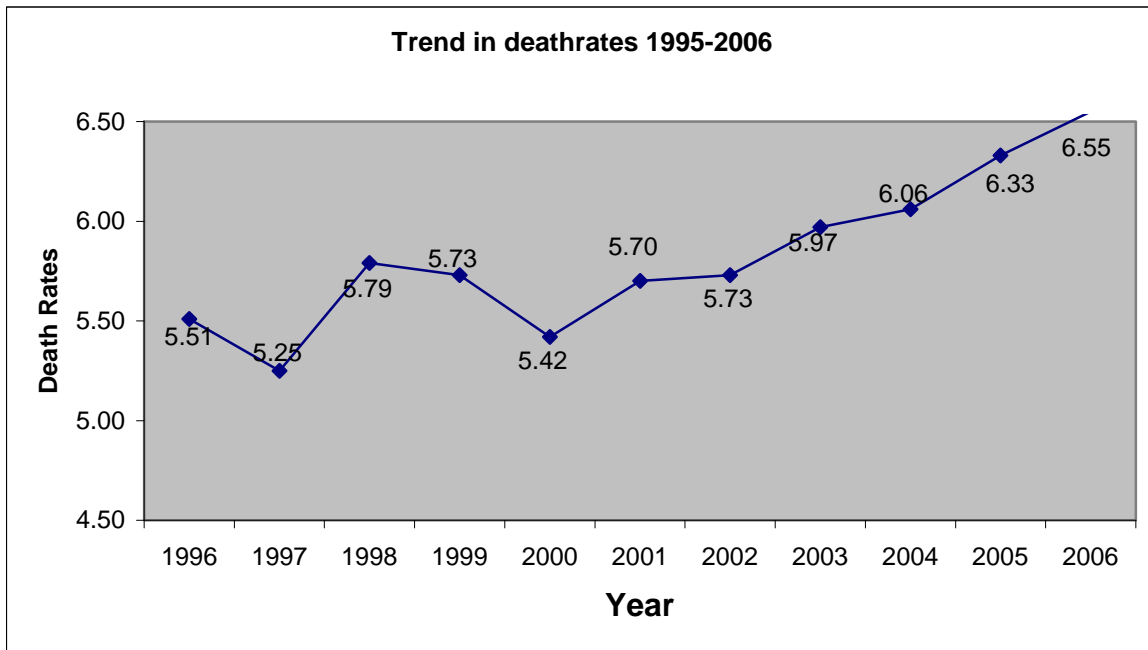

Table 22 reveals that out of 219094 deaths registered during the year 2006, 31738 were delayed registrations. It is observed that 5210 deaths were registered after one year from the date of occurrence.

Deaths by type of medical attention at the time of death are furnished in table 24. Out of the total deaths 57 % occurred in institution.. 18% of deaths were non-institutional but received medical attention at the time of death. 20 % of the total death were not received any medical attention

The age wise and religion wise deaths are furnished in table 25.It reveals that the percentage of death was lowest for both sexes in age group 1-4 years. The highest percentage was seen in the age group 70 and above. Number of male deaths was higher than that of females in all the age groups. About 62, 20 and 17 percentage of deaths were pertaining to the Hindu, Christian and Muslim religion respectively.

Deaths by causes are shown in table 27. On analyzing the data it is observed that heart failure stood in the first place among the causes of deaths.. Asthma was reported as another major cause of death. 104 cases were happened due to AIDS out of which 66 male deaths and 29 female. During the year 2006, 14946 Cancer deaths were reported of which highest number of deaths were from the age group 70and above.

Infant deaths and its mortality rate are given in table 29. At the state level IMR was 8.1. Among the districts higher rate was reported from Kozhikode district (16.45) followed Thiruvananthapuram(15.19) and lowest in Wayanad district (1.62). IMR of the state estimated from SRS data for the year 2006 is 15 which is much higher than that worked out from CRS. This clearly indicates that Registration of Infant death is quite low. Such low registration of infant deaths is matter of concern. From table 30 it is observed that about 68% of infant deaths have occurred to the infants aged below one week.

During the year under report 610 maternal deaths were reported. The data reveals that majority of the maternal deaths, 404, were reported for the age group 45 and above. 3108 stillbirths were reported and its rate is 5.56.

Conclusion

It is worthwhile to mention that CRS is the only source, which can provide vital rates at below state level. Even though cent percentage registration has attained in the case of births, under registration of deaths still exist. Level of registration of maternal deaths and infant deaths are not satisfactory. There is also a need to correctly identify the maternal deaths for estimating the vital indicator MMR. Full coverage of maternal deaths and infant deaths by registration missionary only can help to calculate rates such as IMR, MMR etc, which are essential for health planning. Hence more concentration should be given to the proper implementation and monitoring of Civil Registration System.

DEFINITIONS

Head count ratio	=	$\frac{\text{Total population}}{\text{Aged population}} \times 100$
Aged child ratio	=	$\frac{\text{Population of above 60 yrs}}{\text{Population of below 15 yrs}} \times 100$
Young dependency ratio	=	$\frac{\text{Population of 0-14 ages}}{\text{Population of 15-64 ages}} \times 100$
Old dependency ratio	=	$\frac{\text{Population of above 65 years}}{\text{Population of 15-64 ages}} \times 100$
Total dependency ratio	=	$\frac{(\text{Population of 0-14 years} + \text{Population of above 65 years})}{\text{Population of 15-64 years}} \times 100$
Crude birth rate	=	$\frac{\text{Number of Live birth during the year}}{\text{Mid-year population}} \times 1000$
General fertility rate	=	$\frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age group (15-49) years}} \times 1000$

$$\text{Age specific fertility rate} = \frac{\text{Number of live birth in a particular age group}}{\text{Mid-year female population of the same age group}} \times 1000$$

$$\text{Total fertility rate} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR}}{1000}$$

$$\text{Gross reproduction rate} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR for female live births}}{1000}$$

$$\text{General marital fertility rate} = \frac{\text{Number of live births in a year}}{\text{Mid-year marries female population in the age group (15-49) years}} \times 1000$$

$$\text{Child women ratio} = \frac{\text{Population of 0-4 age group}}{\text{Female population in the age group 15-49}} \times 1000$$

$$\text{Crude death rate} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

$$\text{Infant mortality rate} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Neo-natal mortality rate} = \frac{\text{Number of infant deaths < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Early neo- natal mortality rate} = \frac{\text{Number of infant deaths < than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Late neo- natal mortality rate} = \frac{\text{Number of infant deaths of 7 days to < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Post neo- natal mortality rate} = \frac{\text{Number of infant deaths of 29 days to < than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Peri neo- natal mortality rate} = \frac{\text{Number of still births and infant deaths of < than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

$$\text{Still birth rate} = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

FIGURES AT A GLANCE- KERALA-2006

I Age-sex structure population

1	Sex ratio (females/1000 males)	1070
2	Masculinity proportion (males/1000 popln)	483
3	Head count ratio	909
4	Aged – child ratio	45
5	Age dependency ratio	
	(a) Young dependency ratio	35.69
	(b) Old dependency ratio	11.16
	(c) Total dependency ratio	46.85

II Fertility Indicators

1	Crude birth rate	16.63
2	General fertility rate	58.88
3	Age-specific fertility rate	
	15-19	25.71
	20-24	151.65
	25-29	136.62
	30-34	54.72
	35-39	13.42
	40-44	1.3
	45-49	0.14
4	Total fertility rate	1.92
5	Gross reproduction rate	0.93
6	General marital fertility rate	84.54
7	Child-women ratio	286.51

III Mortality indicators

1	Crude death rate	6.55
2	Sex ratio of deaths (male deaths/1000 female deaths)	1432
3	Percentage of infant death to total death	2.06
4	Infant mortality rate	8.1
(a)	Neo-natal mortality rate	6.68
(b)	Early neo- natal mortality rate	5.48
(c)	Late neo- natal mortality rate	1.2
(d)	Post neo- natal mortality rate	1.4
(e)	Peri neo- natal mortality rate	11
5	Still birth rate	5.56

IV Percentage distribution of birth by type of medical attention at delivery

1	Government hospital	36.65
2	Private hospital	52.96
3	Qualified professional	7.04
4	Untrained functionary and others	3.35

V Percentage distribution of death by type of medical attention before death

1	Institution	57.07
2	Other than medical institution	17.8
3	No medical attention	19.71
4	Not specify	5.42

Vital rates at a Glance

Year	Birth Rate	Death Rate	Infant death rate	Still Birth rate	Maternal Death rate
1992	17.67	5.49	9.84	5.29	0.03
