

Government of Kerala

Report on **DOMESTIC TOURISM**

NSS 65th Round
July 2008 - June 2009

DEPARTMENT OF ECONOMICS & STATISTICS

Government of Kerala

REPORT ON DOMESTIC TOURISM

NSS 65TH ROUND
JULY 2008 – JUNE 2009

N.S.S. Division
Department of Economics and Statistics
Vikas Bhavan, Thiruvananthapuram - 695033

The National Sample Survey Office (NSSO) under the Ministry of Statistics and Programme Implementation, Government of India has been carrying out nationwide socio-economic surveys covering various subjects on regular basis. As the National Sample Survey (NSS) samples were small, the State governments were invited to participate with matching samples so as to enable the preparation of estimates at sub-state level which was not possible with the 'Central Sample' alone. Thus, Kerala has been participating in the National Sample Surveys from the very beginning with matching samples by collecting data adopting the same sampling design, schedules and instructions for the field staff.

The term domestic tourism covers trips of household members within the territory of the State/Country. The economic and social importance of domestic tourism in the State and national economy is manifold: in generating employment in various industries like hospitality, handicrafts, transport services etc. It also uniquely serves the purpose of maintenance of familial and social bonds, which is one of our great traditions. Further, in view of the increase in tourism in recent years, tourism specific development and investment requirements are also on the rise in the State/National economy. This report is based on the 65th round 'State Sample' data on 'Domestic Tourism' collected by the Department of Economics and Statistics, Kerala.

This report is divided into four chapters, including the Introduction of the survey (Chapter one) and describes in detail the concepts and Definitions (Chapter two) and three Appendices. The main findings of the survey are presented in chapters three & four. This report presents the magnitude of domestic tourism activity as revealed by estimates of numbers of households and persons making overnight and same-day trips during a year. Discussions are mainly centered on the Kerala state level estimates and an attempt is made to compare the results with national level by utilizing selected information from NSSO *Report No. 536(65/21.1/1)*. Detailed statistical data are arranged in tables and are presented in Appendix A. The sampling design and estimation procedure is explained in Appendix B, and a facsimile of the schedule of enquiry canvassed in the field is provided as Appendix C.

The technical assistance provided by NSSO, Government of India and the cooperation extended by the sample households is acknowledged. I use this opportunity to place on record the work done by the supervisors, field staff who worked hard to make the survey a success and all other staff in the Directorate who have contributed in different ways to the success of the survey and the subsequent production of the report

I hope that this report will be useful to the planners, policy makers, academicians and researchers. Suggestions for improvement of the content of the report will be highly appreciated.

Place:Thiruvananthapuram
Date : 18.10.2013

V.Ramachandran
Director

The results on 'Domestic Tourism in Kerala' are based on data collected during July 2008 - June 2009 from 9,331 surveyed households in 504 sample villages and 274 urban blocks spread over the State. All estimates relate to a period of 365 days. The important indicators for studying domestic tourism in a demographic domain are derived through the concept of 'trip', which is devised as a unit of movement of members of a household as 'domestic visitors'.

NUMBER OF TRIPS MADE IN A YEAR

- In a one-year period, 422 overnight trips were made per 100 Indian households. The number of trips per 100 households was 426 for the rural population, and 409 for the urban population.
- The incidence of same-day trips, at 1500 per 100 households in a year, was reasonably higher than that of overnight trips. Rural households undertook same-day trips at the rate of 1496 per 100 households, and urban households at the rate of 1514 per 100 households.
- 50.1% of urban overnight visitors and 52.1% of rural overnight visitors are females. Likewise, 51.1% of urban same day visitors and 51.7% of rural same day visitors are females.
- In the case of same day visitors, in rural as well as urban area, the average number of trips was highest in the age group of 30-34. Among children under 15 years, however, the number of trips, both same day as well as overnight, per child was highest in the lowest age group 0-4 for rural as well as urban India.
- The professionals had the highest average number of overnight trips in the rural and rural+urban sector and associate professionals had the highest average number of same day trips in the rural and rural+urban sectors.

CHARACTERISTICS OF TRIPS

- **Trips (Overnight & Same day):** For both the rural and urban population, the ratio of overnight and 77same-day trips was nearly 1:4.
- **Leading purpose (overnight trips):** The social purpose, which included visiting friends and relatives and attending marriages, accounted for 72.1% of overnight trips made by the rural as well as urban population and stood as the most common leading purpose of overnight trips. In rural area, the purpose “health and medical” had a share of 13.8% compared to 6.4% in urban area. Only 0.1% and 0.2% of the overnight trips of the urban and rural population were reported for shopping.
- **Leading purpose (same-day trips):** 48.1% of same-day trips of the rural population and 56.4% of the urban population were made for “social” purposes. 12% of rural population and 9.2% of urban population carried out their same-day trips for shopping.
- **Duration:** The average number of nights spent on overnight trips was 3.1 for the rural as well as urban population. However, the average duration of overnight trips undertaken by the urban population varied from 2.3 nights in the month of September to 4.6 in the month of January and in rural areas, the average duration varying from 2.5 nights in December to 3.5 nights in August.
- **Destination:** The majority of 69% of overnight visitor-trips of the rural population and 48% of urban population, the visitors remained within their district. The majority of same-day visitor-trips - nearly 86% in rural and 83% in urban area - kept the visitors within the district of their residence.

VISITOR AND VISITOR-SPECIFIC CHARACTERISTICS OF TRIPS

- **Gender Profile:** Among every 1000 overnight visitors, 499 were males and 501 were females for the urban sector while 479 were males and 521 females for the rural sector and among same-day visitors 489 were males and 511 were females for the urban

sector while 483 were males and 517 females for the rural sector.

- **Visitor Purpose:** The break-up of overnight or same-day visitor-trips by the purpose that led the visitor to make the trip did not differ appreciably from the break-up of overnight/ same-day trips by leading purpose.
- **Mode of travel:** The most widely used mode of transport in all the cases is “Bus” followed by “own transport” (which includes bicycle, two wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck and animal driven transport).
- Trains were used for 17.3% of the urban overnight trips whereas the same for rural same-day trips were only 0.6%.
- **Type of stay:** For overnight trips as well as same-day trips, around 80% of visitors reported that their major type of stay was with their friends and relatives. 14.5% of rural same-day visitors and 21.3% of urban same-day visitors did not stay anywhere at all.

OCCURRENCE OF DOMESTIC TOURISM ACTIVITY IN A ONE-YEAR PERIOD

- **Household social group:** The social group ST carries the highest percentage of households, where at least one member made a trip (overnight/ same-day) during the last one year, for the urban area (i.e. 100%) where as in rural area 70.6% and 83.5% respectively.
- **Household type:** The percentages for the four household types in urban India range from 82.3 for “others” to 90.6 for the “self-employed” in the case of overnight trips while in case of same-day trips, there are no striking variations in the percentages in both rural and urban area.
- **Household religion:** Estimated percentages of households reporting trips for all religions, except Jain, Sikh and Buddhism, are above 84.

EXPENDITURE ON TRIPS

- Average expenditure per overnight trip was Rs.1484/- for the rural population and Rs.1,875/- for the urban population.

- Overnight trips with ‘social’ leading purpose had a per-trip expenditure of Rs.548 (63% lower than the average trip considering all purposes) for the rural population and Rs.909 for the urban population (52% lower than average).
- Overnight trips for ‘health and medical’ purposes were four times as expensive as the average trip for urban populations and three times as expensive as the average trip for the rural population.
- Overnight trips with ‘business’ purpose had a per trip expenditure of Rs.2,514/- (69% more than the average trip considering all purposes) for the rural population where as , for urban population, it had a per trip expenditure of Rs.1,789/-, which is less than that for the rural and 5% lower than the average trip expenditure.
- The share of social trips in rural sector was 26.55% and 34.92% in urban sector even though such trips accounted for 77% of all overnight trips for both the rural and Urban population.
- the share of “shopping” component was found maximum (rural: 43.01% and urban: 47.12%) for same day trips, in both rural and urban sector.
- In Urban sector, “Transport” had an overall share of 22.93% and a share of 40.78% for “business” trips and in Rural sector, “Transport” had an overall share of 15.16% and a share of 29.78% for “social” trips.
- The total share of the rural sector in domestic tourism expenditure was thus 73% and that of the urban sector, 27%.

Chapter One

Introduction

1.1 Introduction

1.1.1 The NSSO was set up in 1950, with the idea of having a permanent survey organisation to collect data on various facets of the economy through nationwide sample surveys in order to assist in socio-economic planning and policy-making. The NSS is a continuing survey in the sense that it is carried out in the form of successive “rounds”, each round usually of a year's duration covering several topics of current interest in a specific survey period. The surveys are conducted through household interviews, using a random sample of households covering practically the entire geographical area of the country. As the National Sample Survey samples were small, the state governments were invited to participate with matching samples so as to enable the preparation of estimates at sub-state level which was not possible with the ‘Central Sample’ alone. Considering the demands for district level estimates, Kerala has been participating in the National Sample Surveys from the very beginning with matching samples to provide more disaggregated results at regional level. Since 62nd Round (July 2005 – June 2006) onwards Kerala started participating with 50% additional samples.

1.1.2 The present report is based on the household survey on domestic tourism during the period July 2008 to June 2009 was carried out by the Department of Economics and Statistics, Kerala as part of the 65th round of National Sample Survey (NSS). The data were collected through a schedule of enquiry (Schedule 21.1). The aim, was to provide estimates of the volume of domestic tourism in terms of number of visitors (i.e. persons performing trips), number of households undertaking domestic tourism activity and number of trips that contributed to domestic tourism in Kerala. It was also intended to study domestic tourism activity by different population categories such as age, economic level, activity status, occupation

and industry of work, etc.; characteristics of trips such as purpose, main destination, etc. and the expenditure incurred by the households in domestic tourism activity. Based on the data collected during the survey period (July 2008 - June 2009), estimates pertaining to domestic tourism in Kerala along with various characteristics associated with these have been generated and presented in this report.

1.2 Coverage of the survey

1.2.1 The survey covered 504 Panchayat wards and 274 urban blocks. The information collected from each surveyed household in a schedule of enquiry (Schedule 21.1) was used for collection of data from the sample households.

1.2.2 Data were collected on the following :

- 🚩 household characteristics such as household size, principal industry, principal occupation, household type, religion, social group, household consumption expenditure, number of overnight trips and same-day trips undertaken by the household, visits, (if any) of NRIs to the household and their impact, renting out of some portion of the house to tourists during the last 365 days, and awareness, source of information, and impact of the “Incredible India” campaign by the Government of India or other tourism promotional campaigns.
- 🚩 Each household member on age, sex, marital status, educational level, usual principal activity status, industry (NIC) and occupation (NCO) of employed members, number of overnight trips completed during (a) last 30 days and (b) last 365 days and number of same-day trips completed by the member during (a) last 30 days and (b) last 365 days.
- 🚩 each overnight trip and each same-day trip made during the last 30 days by one or more household members, viz trip characteristics and characteristics corresponding to different trip members such as mode of travel, type of stay, and

number of nights spent outside usual place of residence (including journey), the last item being collected for overnight trips only.

on particulars of expenditure on different items under the broad heads of accommodation; food and drink; transport; shopping; recreation; religious, cultural, sporting and health-related activities; and other expenditure, along with information on reimbursement/direct payment by any institution for such trips.

1.3 Contents of the report

1.3.1 This report is based on State sample only. It presents and discusses estimates of various aspects of domestic tourism, along with their correlates, as obtained from the data collected on relevant items for the entire round. Estimates for overnight trips and same-day trips are provided separately for rural and urban sectors

Statement(1): Number of villages/blocks selected/surveyed for Schedule 21.1 separately for Rural and Urban

District	No of wards/UFS Blocks					
	Rural		Urban		Total	
	Selected	Surveyed	Selected	Surveyed	Selected	Surveyed
Thiruvananthapuram	48	48	33	33	81	81
Kollam	48	48	17	17	65	65
Pathanamthitta	24	24	4	4	28	28
Alleppy	28	28	20	20	48	48
Kottayam	36	36	10	10	46	46
Idukki	24	24	2	2	26	26
Ernakulam	36	36	53	53	89	89

Palakkad	48	48	15	15	63	63
Malappuram	60	60	12	12	72	72
Kozhikkode	36	36	37	36	73	72
Wayanad	20	20	1	1	21	21
Kannur	24	24	36	36	60	60
Kasaragode	24	24	7	6	31	30
Total	504	504	276	274	780	778

1.3.2. The report contains four chapters, including the present introductory chapter. Chapter Two states in detail the concepts and

definitions of terms used in the survey. Chapter Three discusses the various features of domestic tourism and Chapter Four, the expenditure related to domestic tourism. The detailed tables on which the findings of this survey are based are presented in Appendix A. The sample design and estimation procedure is explained in Appendix B. Appendix C is a copy of the schedule of enquiry through which the data were collected.

1.3.3 The estimates, in this report, are generally presented as ratios. (In the detailed tables, however, in some of the deeper classifications, some sample sizes may be small and this may have a bearing on the precision of the corresponding estimates).

Chapter Two

Concepts and Definitions

2.0 Important concepts and definitions used in this survey as given in the instructions to field staff conducting the survey are stated below.

2.1 Household: A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” meant that the temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but the temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

2.2 Monthly per capita consumer expenditure (MPCE): For a household, MPCE was the total consumer expenditure over all items divided by the household size and expressed on a per month (30 days) basis.

2.2.1 As it is difficult to collect reliable income data, the NSSO, collects data on consumption expenditure in its surveys. In the present survey on Domestic Tourism (Schedule 21.1), data on household consumer expenditure during the last 30 days was ascertained through five questions (see Appendix C), to facilitate the ordering of households in respective level of living for deeper synthesis of survey results. This helps in portraying the survey variables in the hierarchy of levels of living of the households classified as quintile classes of MPCE.

2.2.2 Quintile classes of MPCE: The population of any region or domain can be divided into five quintile classes of MPCE, where the 1st quintile of the distribution of MPCE means the level of MPCE below 20 per cent of the population lie, the second quintile, the level below which 40 per cent of the population lie, and so on. In this round quintiles were estimated separately for the distribution of MPCE in the rural and urban sector of each State/U.T and all-India. Some of the aspects of domestic tourism have been studied with respect to the level of living of the households which was proxied by monthly per capita consumer expenditure. This ordering of the households in respect of level of living has been derived as the distribution of the households in the quintile classes corresponding to the distribution of the population in the quintile classes.

2.3 Travel: It is the movement of persons between different geographic boundaries, for any purpose and any duration. Those who travel are referred to as travelers. Travel can occur within a country (domestic travel) or involve more than one country (international travel).

2.4 Usual Place of Residence: The usual place of residence (UPR) of a person is the place (village/town) where the person had been staying continuously for at least six months immediately prior to the date of survey. Even if a person was not staying in the village/town continuously for six months immediately prior to the date of survey but was then staying there with intention to stay there

continuously for six months then that place was taken as his/her UPR.

2.5 Usual Environment: The usual environment (UE) of an individual referred to the notional geographical space, extending beyond the UPR of an individual, within which he/she moved in the course of his/her regular routine of life. By the term movement of a person within his/her regular routine of life is meant the regular and frequent (nearly every day/ every week/every fortnight) movements of a person between his/her UPR and some place for the purpose of work or study, visiting homes of friends or relatives, shopping centers, religious places, centres of health care or any other facilities that might be at a substantial distance away but nevertheless were regularly and frequently visited. Such movements might be within his/her UPR or beyond it.

2.6 Trip

2.6.1 With reference to domestic tourism, the term trip related to those household members who were resident Indians. It refers to the movement - for a duration of not more than six months - by one or more household members traveling to a place outside their usual environment (which includes the usual place of residence(UPR)) and return to their UPR (a round trip) for purposes other than those of migration or getting employed or setting up of residence in that place and which is outside their regular routine of life.

2.6.2 Thus, all movements of persons commuting regularly and frequently (nearly every day/ every week/every fortnight) between their UPR and some fixed places for the purpose of work or study, visiting homes of friends or relatives, shopping centers, religious places, centres of health care or any other facilities that might be at a substantial distance away but nevertheless were regularly and frequently visited, were not considered as trips. Similarly, all movements of persons, whose nature of activities within their regular routine of life involved making movements outside their UPR to different places, like travelling salesmen, mobile hawkers, medical

representatives, on-board staff of airlines/railways or of buses, hired taxis, etc were not considered as trips.

2.6.3 Exceptions for exclusion from the coverage of trip as mentioned above: All domestic movements performed by air except for the purpose of migration or getting employed or setting up of residence in that place were considered as trips even if such movements falls within the regular routine of life of the visitor. However, domestic movements performed by on-board aircraft crew as part of their duty were not considered as trips.

2.6.4 A trip might be made up of visits (i.e. stay for a purpose in a place visited during a trip -details in sub-section 2.7) to different places. A trip might be single-member or multi-member; in other words, a trip might be undertaken by one or more members of the sample household with or without members of other households participating. Member(s) of sample households participating in a trip were visitors (details in sub-section 2.7). A trip might be same-day or overnight. An overnight trip was of duration at least one night outside the usual environment. In case of a single night overnight trip, the night was spread over two consecutive dates implying that it had started before and ended after twelve midnight. A same-day trip was a trip which did not cover even a single night i.e., the trip started and ended on the same day (0000 hrs to 2359 hrs).

2.6.5 A trip was uniquely specified by its set of destinations, its leading purpose and its starting and ending date (the last for overnight trips only).Some elaboration of various features associated with a trip, be it single or multi-member, is in order .

2.6.5.1 In case of a multi-member trip for which the set of destinations differed slightly from person to person (among those who undertook the trip) if the persons were together for most of the time (duration of the trip), they were considered to be on the same trip. But if two members of a household spent most of the time away from each other during the period since leaving their residence to returning to

their residence, then they were considered to have been on two different trips even though their starting and returning dates were the same.

2.6.5.2 Main destination: The main destination of a trip was the place, visiting of which was central to the decision to undertake the trip. However, if no such place could be identified by the informant, the main destination was to be defined as the place where the visitors spent most of their time during the trip. If the visitors spent the same amount of time in two or more places during the trip, then the main destination is defined as the one among these places that was the farthest from the usual place of residence of the visitors. The main destination of a trip was same for all the members who undertook that trip.

2.6.5.3 Starting and ending dates: The starting (ending) month was the month of starting (completing) of the trip. In case of a multi-member trip for which one (or more) member(s) among those who went on a trip starting later - or returning earlier - than the others due to other engagements, if both the starting date and the ending date for this member were different from that of the rest of the members, then this member was considered to have undertaken a different trip from the rest. However, if at least one of these two dates was the same for this member as for the rest of the members, and the other date, too, did not differ from that of the rest of the members by more than 3 days, then such a member was considered to have gone on the same trip as the rest of the members. In these cases the earliest starting date (latest ending date) was used to determine the starting month (ending month).

2.6.5.4 Purpose of a trip: The purpose of a trip of a household member was that purpose but for which he/she would not have undertaken the trip. In the survey, these purposes were broadly categorized as: business; holidaying, leisure and recreation; social including visiting friends and relatives, attending marriages, etc.;

religious and pilgrimage; education and training; health and medical ; shopping and others (e.g. volunteer work).

2.6.5.5 Leading purpose of a trip: The leading purpose of a trip as a whole was that purpose without which none of the household members in that trip would have undertaken the trip. There might be exceptional situations where no one purpose could be identified as the leading purpose. For example, there could be two or more purposes, say, pilgrimage and health, recorded for different trip members. In such a case, the leading purpose was identified as that purpose which the informant considered to be the most important for performing the trip. The leading purpose of a trip was the same for all the members who undertook that trip.

2.6.5.6 Type of a trip : a trip could be of two types - package or non-package. The term package trip as used in the survey is detailed below.

2.6.5.6.1 Package Trip: A package was a combination of transport and any one or more chargeable travel services (e.g., accommodation, meals/food, entertainment and/or sightseeing, etc.) and sold by tour operators through travel agencies or directly to final consumers as a single product for a single price. The components of a package tour might be pre-established or tailor-made, in which case, the visitor chooses a combination of services he/she wishes to acquire from a pre-established list of such services. If such a package was availed of for a major part of time in a trip, such a trip was considered as a package trip.

2.6.5.6.2 For the purpose of the survey, if the expenditure on transport and one or more chargeable travel services availed for some time during the trip did not cover the whole trip but covered only a minor time of the duration of the trip then such a trip was not considered as package trip although the trip has a package component. Therefore, a trip which was not a package trip could have both package and non-package components. Similarly, a package trip

could also contain non-package component in addition to its package component, e.g., a visitor could avail himself of accommodation and other services in the package through some tour operator but made some special sight-seeing arrangements in some places of visit in the trip on his own. Thus, a package trip must have had a package component but not vice versa.

2.6.5.7 Mode of travel: Mode of travel refers to means of transport used by visitor(s) to travel in a trip. The travel relevant here was the travelling done to cover the distances to the destinations and not joyrides or movement for adventure, as in skiing or boating for pleasure, or walking inside a museum, fort or maze. One or more of the following means of transport were possible in a trip, viz.: on foot, bus, train(railways), ship/boat, air, own transport: bicycle, two-wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck, animal driven transport, transport equipment rental (hired transport): bicycle, two-wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck, animal driven transport and others .

2.6.5.7.1 Major mode of travel: The means of transport by which maximum distance was traveled was treated as 'major' mode of travel for that trip. In case more than one such mode was there (e.g. train, air) for which equal distance was traveled then that means which was more expensive was treated as 'major' mode of travel for that trip.

2.6.5.7.2 Minor mode of travel: The means of transport by which second maximum distance was traveled was treated as 'minor' mode of travel for that trip.

2.6.5.8 Type of stay: The type of stay refers to the accommodation used for stay by visitor(s) in a trip. Accommodation refers to the space, usually for paid lodging, where the visitor(s) spent some considerable time for spending night, taking rest, spending some leisure time, refreshing oneself, etc. during the trip. It could be: hotel,

private guest house, Government guest house, dharamshala, rented house, friends and relatives or others including carriages / coaches.

2.6.5.8.1 Major type of stay: The category of accommodation where the highest number of nights (for overnight trips) or maximum time (for same-day trips) was spent was treated as 'major' type of stay. In case more than one such category was there (e.g. Hotel, Dharmashala) where same no. of nights (equal length of time) was spent then that type which was more expensive was treated as 'major' type of stay.

2.6.5.8.2 Minor type of stay: The category of accommodation where the second highest number of nights for overnight trips - or second highest length of time for same-day trips was spent was treated as 'minor' type of stay.

2.6.5.7 No. of nights spent outside usual place of residence (including journey): This was the number of nights spent by the visitor outside his/her usual place of residence from starting of the trip to the completion of the trip, including the nights spent in transit.

2.6.5.9 No. of places visited during the trip: The 'main destination' was counted as a place of visit. If two or more places were reported to have been visited which were in the same town or in the same village, they were counted once only.

2.7 Visit: The term visit referred to the stay (overnight or same-day) for a purpose in a place visited during a trip. The stay need not be overnight to qualify as a visit. Entering a geographical boundary without stopping there for a purpose was considered as being in transit and did not qualify as a visit to that area. It may be noted that a trip might consist of visits to one or more places.

2.7.1 Visitor: A person performing a trip as elaborated above was termed a visitor in this survey.

2.7.2 Domestic Visitor: A domestic visitor was a household member, who had completed a 'trip'. In other words, a domestic visitor was a person (household member), residing in the country, who

traveled to a place within the country, outside his / her usual place of residence and not as a part of his/her regular routine of life, for duration of not more than six months at a time and completed the trip during the reference period and whose main purpose of visit was other than (a) getting engaged in employment or taking up an occupation in that place or (b) setting up of residence in that place or (c) migrating to that place.

2.7.3 Thus, from the purview of domestic visitors in the survey, the following were excluded:

- (i) persons commuting regularly and frequently (nearly every day, every week or every fortnight) between their usual place of residence and place of work or study, visiting frequently places within their current routine of life in the neighbouring areas(which might be outside their UPR), for instance, visiting homes of friends or relatives, shopping centres, religious places, centres of health care or any other facilities that might be at a distance but nevertheless were regularly and frequently visited
- (ii) persons arriving at a place, with or without a contract, to take up an occupation or to engage in employment in that place
- (iii) persons arriving at a place for setting up of residence in that place
- (iv) persons who traveled to work temporarily (i.e. less than six months) in institutions within the country
- (v) foreigners resident in India
- (vi) persons arriving at a place on migration or migrants. A migrant was a person whose place of enumeration was different from his/her last usual place of residence (UPR)
- (vii) persons, whose nature of activities within their regular routine of life involved making movements outside their UPR to different places, like travelling salesmen, mobile hawkers, medical representatives, on-board staff of airlines/ railways or buses, hired taxis etc.

2.7.4 On the other hand, the following were included in the purview of domestic visitors in the survey:

- (i) persons who completed a trip during the reference period and the duration of trip was not more than six months
- (ii) persons who were household members at the time of canvassing the schedule but were not household members at the time of actually completing a trip within the reference period
- (iii) persons on a trip for any of the following purposes: business; holidaying, leisure and recreation; social including visiting friends and relatives, attending marriages, etc.); religious and pilgrimage; education and training; health and medical; shopping; others (e.g. volunteer work)
- (iv) domestic component (not in transit) of the trip of a household member visiting a place outside the country

2.7.5 Domestic visitors were classified into two categories: domestic overnight visitors and domestic same-day visitors. In this survey, information was collected for both these categories in respect of those visitors who belong to the sample households.

2.7.5.1 Domestic Overnight Visitor: A domestic overnight visitor was a domestic visitor who spent at least one night in a trip during last 365 days. This means that the trip covered at least two calendar days, wholly or partly.

2.7.5.2 Domestic Same-day Visitor: A domestic same-day visitor was a domestic visitor who did not spend even a single night in any trip during last 365 days. This means that the trip started and ended on the same day (0000 hrs to 2359 hrs).

2.7.6 Domestic Tourism: It covered trips of household members within the territory of India, i.e of domestic visitors 1, either as a domestic trip or as part of an international trip.

(Note: An important clarification regarding usage of the term 'visitor' as used in this survey : In this survey, a household, say H-a, reporting a domestic visitor: overnight or same-day, was one whose at least one member made a trip: overnight or same-day, during last 365 days. However, any non-member (of household H-a) making a visit to

household H-a is NOT a 'visitor' with respect to sample household H-a as per this survey. Further, the survey being on domestic tourism in India, the term visitor and domestic visitor are one and the same. Thus, throughout the remaining part of this report, the term visitor has been used.)

2.8 Tourism Expenditure

2.8.1 For the purpose of this survey, tourism expenditure included expenditure made not just during the trip but also the expenditure related to the trip even if made before or after the trip. It included all expenses related to the trip paid or payable by the household. It also included expenditure related to the trip, whether directly paid or reimbursed, by some institution like Government or other agencies on behalf of the selected household. All expenditure in connection with the trip except those used/intended to be used for productive purposes/enterprises was included. All expenditure made by a sample household (whose members were on a trip) on members of other households was included. But all expenditure made by other households for any trip undertaken by a sample household was excluded.

2.8.2 Tourism expenditure was classified as (a) package component and (b) non-package component, with the latter further sub-divided as: (i) accommodation (ii) food and drink (iii) transport (iv) recreation, religious, cultural, sporting and health related activities (v) shopping and (vi) others.

2.8.3 Tourism expenditure included (i) monetary expenditure on goods and services paid or payable by the visitor out of his/her own pocket (ii) direct expenditure by the visitor reimbursed by some institution like Government or other agencies or expenses of the visitor directly paid by such institutions (iii) expenditure incurred on items of high unit values like cars, computers, etc. related to a trip if those are used for consumption purpose and not for productive purpose.

2.8.4 Tourism expenditure excluded (i) payment of taxes and duties not levied on products (goods and services) (ii) purchase of

financial and non-financial assets, including land, real estate (iii) all transfers of cash or used goods such as donations to charities or to members of other households as these do not correspond to the purchase of consumption goods or services from these charities or individuals. Alms are also excluded.

2.9 Non-Resident Indian (NRI): Indian citizens (including officials of Indian diplomatic missions abroad) who stay abroad for employment or for carrying on business or vocation or any other purpose indicating a period of stay abroad exceeding 6 months were considered as Non-Resident Indian (NRI) for the purpose of this survey.

Chapter Three

Characteristics of Domestic Tourism

3.0.1 As mentioned earlier, the activity of domestic tourism undertaken by the members of the households has two distinct features, viz. the trip and the visitor. The trip, either same-day or overnight, is the ultimate unit to study the activity of domestic tourism and it related to the movement of one or more members of the household to a main destination with a leading purpose. The members of the households who happened to be the members of the trip are the visitors. The salient characteristics of domestic tourism activities presented in this chapter, accordingly, cover its intensity and variations over different categories of households, visitors and trips.

3.0.2 The average number of trips made during a year by households and persons in the State and by persons of different ages, occupations and industries are presented in this chapter. The break-up of trips (occasionally, of visitor-trips) by various trip characteristics such as leading purpose, month of visit, and main destination type (within or outside district/state) and the distribution of visitors by activity status, are also examined. Further, the break-up of visitor-trips by important visitor-trip characteristics: purpose of visit, mode of transport, and major place of stay, are studied. In other words, questions such as “Which were the most common purposes for which people went on overnight trips?” “Which modes of transport were most commonly used for same-day trips?” are answered. Estimates of occurrence of domestic tourism activity are also presented in terms of percentages of persons and households reporting at least one overnight/same-day trip during a one-year period - in case of households, separately for different household occupations, social groups and religions.

3.0.3 The findings presented in this chapter are grouped into four sections:

- a) incidence and characteristics of trips;
- b) participation of various population groups;
- c) visitor-trip characteristics; and
- d) Occurrence of domestic tourism activity among households and persons in a one-year period.

3.0.4 Two different reference periods - 'last 30 days' and 'last 365 days' preceding the date of survey - were used for collecting information related to trips. However, the aggregate estimates on trips and trip-related characteristics have been generated pertaining to a one-year period unless otherwise specified and the procedure thereof is explained in the Appendix B on 'Sample Design and Estimation Procedure'.

SECTION A: INCIDENCE AND CHARACTERISTICS OF TRIPS

3.1 Incidence of trips per household

3.1.1 As stated earlier, a trip was the basic unit to study the activity of domestic tourism and it corresponded to movement of the members of the households outside their usual place of residence (excluding the movements which were part of the usual routine of life) with distinctive leading purposes, destinations and other trip characteristics. Thus one of the important measures of intensity of domestic tourism is the number of trips during one year per household. On an average, four overnight trips in a year were undertaken by a household, with trips made by rural households marginally higher in number than their urban counterpart (Statement 3.1). To be more precise, 422 overnight trips were undertaken per 100 households - 426 trips per 100 households in rural areas and 409 in urban areas.

Statement 3.1: Average number of overnight and same-day trips * per 100 households:

Kind of trip	Average number of trips per 100 households		
	Rural	Urban	Rural+Urban
Overnight	426	409	422
Same-day	1496	1514	1500

Refer Table 3, 38 & 41 in Appendix A

*last 365 days

3.1.2 The incidence of same-day trips in Kerala households, at an average of 15 in a year, was thus almost three and a half times that of overnight trips. The average number of same-day trips per 100 households during a year was higher in urban area (1514) than in rural area (1496). The State average was 1500.

3.2 Trips: overnight and same-day

3.2.1 For the rural and urban population, slightly over one-fifth of all trips were overnight trips and nearly four-fifth were same-day trips (Statement 3.2). Thus for the rural and urban population, the proportion of same-day trips was marginally higher than the proportion of overnight trips.

Statement 3.2: Percentage of overnight and same-day trips* to total:

Sector	Percentage of Trips		
	Overnight	Same-day	All
Rural	22.15	77.85	100
Urban	21.26	78.74	100
Combined	21.95	78.05	100

Refer Table 38 & 41 in Appendix A *last 365 days

3.3 Leading purpose of trips

3.3.1 In the survey, for each reported trip, a distinct leading purpose was identified. The leading purpose of a trip was understood

as the purpose in the absence of which the trip would not have been undertaken. It was recognized that if the individual purposes of different participants differed, there might be trips without a leading purpose in the above sense. Thus two members on a trip might have had different purposes each strong enough to make the trip possible even if the other person dropped out of the trip. In such cases the most important purpose among the purposes of the individual participants, as perceived by the informant, was identified as the leading purpose of the trip. The break-up of overnight and same-day trips by leading purpose is shown in Statement 3.3.

Statement 3.3: Percentage distribution of overnight and same-day trips* by leading purpose

leading purpose	percentage of trips with the purpose among					
	overnight trips			same-day trips		
	rural	urban	rural+ urban	rural	urban	rural+ urban
business	0.7	2.1	1.1	1.3	1.7	1.4
holidaying, leisure & recreation	2.5	5	3.1	2.3	5.8	3
social	72.1	72.1	72.1	48.1	56.4	49.7
religious & pilgrimage	6.8	9.1	7.4	5.3	6.2	5.4
education & training	1.1	1.4	1.2	1.4	0.7	1.3
health & medical	13.8	6.4	12	24.3	15.3	22.6
shopping	0.2	0.1	0.2	12	9.2	11.5
others	2.7	3.8	2.9	5.2	4.7	5.1
total	100.0	100.0	100.0	100.0	100.0	100.0

Ref:Table 38 & 41 in Appendix A

* last 365 days

3.3.2 Leading purpose: overnight trips: The social purpose, which included visiting friends and relatives and attending marriages, accounted for 72.1% of overnight trips made by the rural as well as urban population and stood as the most common leading purpose of overnight trips. Overnight trips for health and medical purposes were more common in rural area, where they had a share of 13.8% compared to 6.4% in urban area. 9.1% of overnight trips made by the urban population were for religious trips and pilgrimages while rural areas had a share of 6.8%. While 2.5% of the overnight trips of the

rural population were reported to be for holidaying, leisure and recreation , 5% of those were reported for urban. Only 0.1% and 0.2% of the overnight trips of the urban and rural population were reported for shopping.

3.3.3 Leading purpose: same-day trips: Social visits were also the leading purpose of 56.4% of the same-day trips of urban and 48.1% of the rural population. In rural (24.3%) and urban (15.3%) areas many more same-day trips were carried out for health and medical purposes which were more than that of the overnight trips whereas same-day trips for religious and pilgrimage purpose were less than that of overnight trips (rural:5.3% and urban:6.2%). 12% of rural population and 9.2% of urban population carried out their same-day trips for shopping, which were far more than that of overnight trips.

3.4 Month of visit

3.4.1 Taking the 'month of visit' as the ending month (in case the starting and ending months are different), the percentage distribution of trips over months of the year is shown in Statement 3.4. It may be noted that the estimates are based on information on trips made by sample household members in the 30 days preceding the day the household was interviewed. Since exactly equal numbers of households were not interviewed in every month of the survey year, the numbers of trips recorded as made in January, February, etc. depend not only on the real intensity of tourism activity during these months but also on the numbers of households surveyed during these months and in the succeeding months (e.g. trips made in January may be recorded by interviews taking place in January or in February). Under the circumstances, it may not be appropriate to read too much into the month-to-month differences in percentage of trips, which are not very large except that the figures for June for both sectors, and the figures for July in the urban sector, are noticeably low compared to, say, the figures for May or August. By and large, it is seen that 7-10% of trips were made in most months of the year. The

low percentage shares of June (and also July for the urban sector) are offset by above-average shares in the months immediately following.

Statement 3.4: Percentage distribution of overnight and same-day trips by month of visit.

month#	percentage of trips made in the month					
	overnight trips			same-day trips		
	rural	urban	rural+urban	rural	urban	rural+urban
January	7.6	10.1	8.2	7.7	8.2	7.8
February	8.6	7.0	8.2	6.1	8.2	6.5
March	8.4	4.5	7.5	9.3	5.3	8.5
April	8.6	8.5	8.5	6.7	6.0	6.5
May	10.3	10.6	10.3	8.5	7.5	8.3
June	4.7	4.1	4.6	6.1	2.8	5.5
July	6.2	2.0	5.1	10.5	3.3	9.1
August	11.3	8.6	10.7	13.1	14.3	13.3
September	6.8	20.3	10.0	7.2	17.2	9.1
October	9.0	6.1	8.3	7.5	8.2	7.7
November	9.4	7.2	8.9	8.5	9.5	8.7
December	8.9	10.8	9.4	8.8	9.5	9.0
all	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 39 & 42 in Appendix A #ending month for overnight trip

(Note: It was mentioned that January (2009) trips would be recorded by interviews made in January or February (2009). The case of June is a little different. June trips would be recorded by interviews made in July 2008 (June 2008 trips) and by interviews made in June 2009 (June 2009 trips). Because of the logistics of launching of surveys, however, it is often the case that the survey work is not in full swing before the second half of July. This would affect the estimates of not only June but also July, as July trips have to be recorded by interviews in July and August.)

3.5 Duration of trips

3.5.1 The average duration of overnight trips in number of nights spent separately for trips ending in different months is given in statement 3.5 The duration of each reported trip was ascertained by the survey in terms of the number of nights spent. On an average, the duration of a trip was 3.1 nights for both rural and urban households. The average duration of trips is seen to have greater variability over months in the urban sector, where it varied from 2.3 in September to 4.6 in January. In the rural sector it was highest in August, September at 3.5 and within 2.5 to 3.4 in all other months.

Statement 3.5: Average duration of overnight trips (no. of nights spent)

month#	Average duration of overnight trips (no. of nights spent)		
	rural	urban	rural+urban
January	3.0	4.6	3.5
February	3.3	2.6	3.1
March	2.7	3.8	2.9
April	3.0	4.5	3.4
May	3.1	3.2	3.1
June	2.7	3.4	2.9
July	3.4	3.6	3.4
August	3.5	2.7	3.3
September	3.5	2.3	2.9
October	3.4	3.2	3.3
November	2.8	2.8	2.8
December	2.5	2.4	2.5
All	3.1	3.1	3.1

Ref: Tables 39 in Appendix A

#ending month

*last 365 days

3.6 Package and non-package trips

3.6.1 Among the characteristics of trips identified was whether or not it was a package trip. A package trip was one (see Chapter Two, paragraph 2.6.5.6.1) in which a package was availed of for the major part of the duration of the trip. A package was a combination of transport and any one or more chargeable travel services - e.g., accommodation, meals/food, entertainment, sightseeing - and sold by tour operators through travel agencies or directly to final consumers as a single product for a single price. (The components of a package tour might be pre-established or tailor-made.) The survey revealed only a marginal presence of package trips in domestic travel habits of the households. Statement 3.6 shows that only 4.5% of overnight trips for the urban population and 3.1% for the rural were package trips. Among same-day trips, only 2.1% of trips by the urban population and 0.5% of those by the rural population were of the package type.

Statement 3.6: Percentage distribution of overnight and same day trips by type of trip.

Type of trip	percentage of trips of the type among					
	overnight trips			same-day trips		
	rural	urban	rural+urban	rural	urban	rural+urban
Package	3.1	4.5	3.4	0.5	2.1	0.8
Non-package	96.9	95.5	96.6	99.5	97.9	99.2
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 38 & 41 in Appendix A

3.7 Destination type

3.7.1 For each trip, a main destination was identified and classified according to whether it was within the district to which the household residence belonged, or outside the district but within the same State, or outside the State. This would enable the study of the relative frequencies of trips by these three destination types. One may also study the relative frequencies of visitor-trips by destination type (counting each trip as many times as the number of participating members) and so get an idea of the relative volumes of visitor movements of these three kinds. This, in fact, has been done in Statement 3.7.

3.7.2 *Destination type: overnight trips:* About 14% of urban, but only 6% of rural overnight visitor-trips involved travel to a different state from their place of residence. In the majority (69%) of overnight visitor-trips of the rural population, the visitors remained within their district, while in 25%, they travelled beyond their district to a place within their state. Among overnight visitor-trips of the urban population, it was journeys limited within the boundaries of the visitors' district that were more common (48%), with only about 38% that were beyond one's district (within the state).

3.7.3 *Destination type: same-day trips:* Travel within one's state accounted for nearly 99% of rural and urban same-day visitor-trips. About 16% of urban and 13% of rural same-day visitor-trips involved travel beyond the boundaries of the visitors' district, remaining within

their state. The majority of same-day visitor-trips - nearly 86% in rural and 83% in urban area - kept the visitors within the district of their residence.

Statement 3.7: Percentage distribution of overnight and same day visitor-trips by main destination type.

destination type	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
within district	68.8	48.3	63.8	85.9	82.8	85.3
outside district but within state	24.9	38.0	28.1	13.4	15.9	13.9
outside state	6.3	13.7	8.2	0.7	1.3	0.8
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 28 & 33 in Appendix A

3.8 Number of places visited per overnight trip

3.8.1 The estimated average number of places (towns or villages) visited per overnight trip was studied by sector of location of the visitor household and main destination type; the results are shown in Statement 3.8.

Statement 3.8: Average no. of places visited per overnight trip by main destination

destination type	Average no. of places visited per overnight trip by main destination		
	rural	urban	rural+urban
within district	1.02	1.03	1.02
outside district but within state	1.21	1.25	1.22
outside state	0.00	0.00	0.00

Ref: Tables 40 in Appendix A

SECTION B: PARTICIPATION OF VARIOUS POPULATION GROUPS

3.9.0 As stated earlier, the trips recorded for a sample household were movements in which members of the household had participated. Various characteristics of each household member such as age, occupation, etc. were also recorded as part of the

survey. This person-wise information enables the study of participation in domestic tourism activity by different population categories.

3.9 The Gender Effect

3.9.1 *Gender profile* of visitors: As an overnight/ same-day visitor is understood as a person who made at least one overnight/ same-day trip during the reference period of 'last 365 days', the population of overnight or same-day visitors can be identified and various characteristics studied. One matter of interest here would be the gender profile of visitors, shown by their male-female break-up. This is given in Statement 3.9. Thus, among every 1000 overnight urban visitors, 499 were males and 501 were females. The female visitors in both rural and urban sector were more than that of male visitors in both the cases of overnight and same-day visitors.

Statement 3.9: Percentage distribution of overnight and same day visitors# by gender of visitor				
Gender	Overnight visitors		Same-day visitors	
	rural	urban	rural	urban
Male	47.9	49.9	48.3	48.9
Female	52.1	50.1	51.7	51.1
Total	100.0	100.0	100.0	100.0

Ref: Tables 17 & 22 in Appendix A

#in last 365 days

3.10 The Effect of Age

3.10.1 Statement 3.10 shows the variation with age in average number of trips made by a person. In all, 18 age-groups are considered, all of width 5 years except the last. For both overnight and same-day trips, the average number of trips per person is seen to rise gradually up to a certain age-group and then decline, the decline being steeper for overnight trips. The average number of both overnight and same-day trips made by children was higher than the average number of trips made by the aged. Younger children made more trips than older ones, presumably because

they could not be left alone by their parents; thus the average number of trips falls instead of rising as one moves up the age range from 0-4 to 10-14. This was true for rural as well as urban area. In rural as well as urban area, the average number of trips, both overnight and same-day, was lowest in the age group of Above 84. Among overnight visitors, the average number of trips was highest in the age group of 0-4 due to the reason mentioned above and that in the case of same-day visitors, was highest in the age group of 30-34.

Statement 3.10: Average no. of trips per person* for different age-groups						
Age Group	average no. of trips					
	Overnight			Same-day		
	rural	urban	rural+urban	rural	urban	rural+urban
0-4	3.36	3.17	3.32	5.63	6.01	5.72
5-9	2.95	2.93	2.94	5.42	5.54	5.45
10-14	2.56	2.46	2.54	5.16	5.37	5.20
15-19	2.39	2.15	2.34	6.11	5.92	6.07
20-24	2.48	2.70	2.53	6.77	7.67	6.97
25-29	2.88	2.84	2.87	7.82	7.84	7.83
30-34	2.92	2.82	2.90	8.75	8.81	8.77
35-39	2.78	2.66	2.75	8.25	7.87	8.16
40-44	2.52	2.54	2.53	8.29	8.27	8.29
45-49	2.19	2.26	2.21	8.27	8.30	8.27
50-54	2.06	1.88	2.02	8.30	7.69	8.15
55-59	2.04	1.76	1.96	8.61	7.35	8.27
60-64	1.66	1.51	1.62	6.90	6.33	6.78
65-69	1.42	1.28	1.39	5.55	5.72	5.59
70-74	1.14	1.31	1.17	4.77	6.03	5.06
75-79	1.23	1.03	1.19	4.57	4.85	4.63
80-84	1.19	0.41	1.00	2.90	2.16	2.72
Abv 84	0.46	0.43	0.46	2.05	2.02	2.04

Ref: Tables 17 & 22 in Appendix A

#in last 365 days

3.11 Variation with occupation

3.11.1 Statement 3.11 shows variation with occupation in the average number of overnight and same-day trips in a one-year period, with nine occupational categories of households considered. Among the employed categories, legislators, senior officials and

managers had the highest average number of same-day trips in the urban sector, but the least among the rural overnight visitors. The professionals had the highest average number of overnight trips in the rural sector and associate professionals had the highest average number of same-day trips in the rural and rural+urban sectors. Skilled agricultural and fishery workers had the least overnight trips in the urban sector. This reveals the fact that the aged, as well as children of the 5-14 age-groups, made fewer same-day trips on the average than the rest of the population.

Statement 3.11: Average no. of trips per person# for different occupation groups.						
Occupation	average no. of trips					
	Overnight			Same-day		
	rural	urban	rural+urban	rural	urban	rural+urban
legislators, senior officials and managers	2.02	2.93	2.33	10.78	10.86	10.80
professionals	3.82	3.14	3.55	10.42	8.55	9.68
associate professionals	2.91	3.26	3.03	12.14	9.66	11.32
clerks	3.12	3.26	3.17	9.62	10.30	9.87
service workers and shop & market sales workers	2.48	2.62	2.52	8.92	8.40	8.77
skilled agricultural and fishery workers	2.19	1.90	2.16	8.84	9.56	8.91
craft and related trades workers	2.46	2.36	2.43	9.24	8.61	9.07

elementary occupations	2.34	2.11	2.31	7.27	7.40	7.28
All	2.46	2.37	2.44	6.93	6.98	6.94

Ref: Tables 20 & 25 in Appendix A

#in last 365 days

Note: The “all” row of Statement 3.15 covers not only these nine categories but the entire population, including the residual category “persons with blank occupation (NCO) code”. This includes persons too young or too old to work,

housewives, students, pensioners, rentiers, remittance receivers, beggars, prostitutes and other persons not gainfully employed. No estimate of average number of trips was generated for this heterogeneous category. The “all” estimate also takes into account those sample persons for whom the occupation code was not recorded.

3.12 Variation with industry

3.12.1 Statement 3.12 shows variation with industry of employment (NIC industry group) in average number of overnight and same-day trips during a one-year period. As in case of occupation, “all” includes those with blank industry code, which applies to all those not gainfully employed. Again it is clear, from a comparison of the “all” row figures with the rows for specific industries, that, with the exception of persons employed by private households, persons not gainfully employed in any industry made fewer trips on an average than the gainfully employed population. Variation over industry groups in number of trips per person was relatively low for overnight trips and a little more prominent in case of same-day trips.

Among the gainfully employed, those employed in “electricity, gas and water supply” had higher average overnight trips than other industry groups. In case of same-day trips by rural people, those employed in “education” sector had higher averages. Generally, those employed in “electricity, gas and water supply”, “financial intermediation”, “education”, “health and social work”, and “real estate, renting and business activities” had higher averages than other industry.

Statement 3.12: Average no. of trips per person# for different industry groups.

Occupation	average no. of trips					
	Overnight			Same-day		
	rural	urban	rural+urban	rural	urban	rural+urban
agriculture, hunting and forestry	2.40	2.34	2.40	7.96	8.26	7.98

3.13 Distribution of visitors by broad activity status

3.13.1 A related point of interest is the percentage break-up of visitors by broad activity status: that is, into the categories “employed”, “unemployed”, and “out of labour force”, which is shown in Statement 3.13. It is seen that the percentage share of the “out of labour force” category in overnight and same-day visitors of both rural and urban area was more than 65%. This is because of the fact that

the “not in labour force” category would include large numbers of the aged and children too young to work.

Statement 3.13: Percentage distribution of overnight and same day visitors by broad activity status.						
Broad activity status	Rural		Urban		Rural+Urban	
	Percentage of visitors		Percentage of visitors		Percentage of visitors	
	Overnight	Same-day	Overnight	Same-day	Overnight	Same-day
Employed	29.8	30.5	31.4	30.3	30.2	30.4
Unemployed	2.0	2.1	2.2	2.1	2.1	2.1
Out of labour force	68.1	67.4	66.4	67.6	67.8	67.4
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 18 & 23 in Appendix A

SECTION C: VISITOR-TRIP CHARACTERISTICS

3.14.0 The classification of trips by characteristics of trips such as leading purpose of trip and month of visit was studied in Section A of this chapter. Certain features of trips, however, differ not only from trip to trip but, for the same trip, may vary from one participant to another - and therefore were recorded separately by the survey for each trip for each participant. These include (major) mode of travel, major place of stay, and even purpose of the visitor (as distinct from leading purpose, which is fixed for a particular trip). These characteristics are termed visitor-trip characteristics as they may vary with each visitor-trip combination. It follows that the relative frequencies of reporting of each category of reported purpose, or reported mode of travel, should be counted in terms of number of visitor-trips, rather than in terms of number of trips or visitors. This is done in this section, where the relative prevalence of different purposes, modes of travel, etc., is discussed.

3.14 Visitor purpose

3.14.1 *Visitor purpose: overnight trips:* The estimated break-up of trips by leading purpose the purpose in the absence of which the trip would not have been undertaken has already been discussed in Section 3.3. The reason prompting some of the participants to make the trip

may, however, differ from the leading purpose. Statement 3.14 shows the percentage break-up of rural/urban visitors-trips by visitor purpose, separately for overnight and same-day trips. By far the commonest purpose reported by persons who made overnight trips was social. This purpose alone prompted 77% of rural and urban overnight visitors to make their trips. Health and medical purposes accounted for 12% of rural and about 5% of urban, religious purposes, including pilgrimages, accounted for 9.6% of urban and 6.4% of rural visitors. *Shopping* purpose accounted for almost nearly 0% of rural as well as urban visitors.

3.14.2 *Visitor purpose: same-day trips:* Statement 3.14 shows that for same-day visitors also, as in the case of overnight visitors, the most common purpose reported is “Social”, but the share of which stood far below than that of Overnight trips(rural-54.9% and urban-62.4%). For the rural population this was explained by the much larger shares of health and medical and shopping . Recreation purpose accounted for 5.4% of urban where as it was only 2.3% in rural sector.

Statement 3.14: Percentage distribution of overnight and same day visitor-trips by purpose of visit.						
Purpose	Overnight			Same-day		
	rural	urban	rural+urban	rural	urban	rural+urban
business	0.3	1.1	0.5	0.7	0.9	0.8
holidaying, leisure & recreation	2.0	3.8	2.4	2.3	5.4	2.9
social	77.0	77.2	77.1	54.9	62.4	56.5
religious & pilgrimage	6.4	9.6	7.2	5.9	7.7	6.3
education & training	0.5	0.8	0.6	0.9	0.5	0.8
health & medical	11.8	5.3	10.2	23.1	13.6	21.1
shopping	0.2	0.1	0.2	8.9	6.4	8.4
other	1.7	2.1	1.8	3.3	3.1	3.3
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 27 & 32 in Appendix A

3.14.3 *Leading purpose and visitor purpose:* Comparison of Statement 3.14 with Statement 3.3 does not reveal any striking differences in the break-up of trips by leading purpose from the break-up of visitor-trips by visitor purpose. For both overnight and same-day trips, the

percentage of trips with leading purpose business is lesser than the percentage of visitor-trips where the visitor's purpose is business. This is due to the fact that as the average number of persons travelling together on a business trip is smaller than the average number of persons travelling together on a social trip, and occasionally, a business trip may include one or more household members whose purpose of travel is health or shopping, but the converse would be relatively rare.

3.15 Mode of travel

3.15.1 A trip may involve more than one mode of transport. Major mode of transport reported for each visitor is the mode by which the visitor covered the longest distance. The percentage distribution of visitor-trips by mode of travel separately for overnight and same-day trips made by rural and urban population is shown in the Statement 3.15 below.

Statement 3.15: Percentage distribution of overnight and same-day visitor-trips by mode of transport						
Mode of transport	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
On foot	0.3	0.1	0.3	0.5	0.4	0.5
Bus	75.4	55.6	70.5	78.6	69.1	76.7
Train	4.8	17.3	7.9	0.6	3.2	1.2
Ship/Boat	0.1	0.5	0.2	0.3	0.3	0.3
Air	0.0	0.4	0.1	0.0	0.0	0.0
Own transport	11.0	20.1	13.2	13.3	21.5	15.0
Transport equipment-Rental	8.1	5.5	7.5	6.3	5.2	6.1
Others	0.2	0.5	0.3	0.2	0.3	0.2
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 30 & 34 in Appendix A

3.15.2 Form the above statement, it is clear that the most widely used mode of transport in all the cases is "Bus" followed by "own transport". It is to be remembered here that, as per the survey, "own transport" includes bicycle, two wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck and animal driven transport.

3.15.3 Rented transport had a good share in the rural areas compared

to urban sector. Trains were used for 17.3% of the urban overnight trips whereas the same for rural same-day trips were only 0.6%.

3.16 Major type of stay

3.16.1 For a visitor on a trip, this refers to the type of accommodation: hotel, guest house, etc., where the visitor spent the greatest number of nights for overnight trips or maximum time for same-day trips.

Statement 3.16: Percentage distribution of overnight and same-day visitor-trips by major place of stay						
Mode of stay	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
Hotel	4.0	7.5	4.8	0.3	0.3	0.3
private guest house	0.8	0.9	0.8	0.1	0.2	0.1
govt guest house	0.5	0.9	0.6	0.2	0.0	0.2
Dharmasala	0.9	0.9	0.9	0.1	0.1	0.1
rented house	0.7	1.1	0.8	0.0	0.0	0.0
did not stay at all	-	-	-	14.5	21.3	15.9
friends & relatives	77.3	72.5	76.1	82.9	76.4	81.6
others including carriages/coaches	15.8	16.3	15.9	1.8	1.8	1.8
All	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 31 & 35 in Appendix A

3.16.2 As per statement 3.16 above, for overnight trips as well as same-day trips, a large number of visitors reported that their major type of stay was with their friends and relatives. 7.5% of the urban overnight visitors and 4% of rural overnight visitors chose hotels as their major type of stay.

3.16.3 Govt guest houses and private guest houses were the major type of stay for an estimated 0.9% of the urban overnight visitors. 14.5% of rural same-day visitors and 21.3% of urban same-day visitors did not stay anywhere at all.

SECTION D: OCCURRENCE OF DOMESTIC TOURISM ACTIVITY IN A ONE-YEAR PERIOD

3.17 Measures of occurrence

3.17.1 Instead of measuring the level of tourism activity in terms of number of trips per household or per person, an alternative way

would be to measure the proportion of persons or households participating (at least once) in trips during a period such as one year. We may call this a measure of the occurrence of tourism activity among households or persons.

3.17.2 It may be observed that the choice of the period during which occurrence of tourism activity is to be observed in households or persons will affect the quality of the measure that is being proposed here. Too short a period will render the measure vulnerable to sampling fluctuations. If, on the other hand, too long a period is chosen, near-100% occurrence rates (nearly all households or persons reporting at least one trip) will be observed for every category of households and persons, which means the measure will be insensitive, failing to discriminate between states or between socio-economic categories in respect of level of tourism activity. In this survey, a period of 'last 365 days' was used to observe the occurrence of tourism activity, giving rise to estimates of occurrence during a one-year period.

3.18 Household occupation

3.18.1 Statement 3.17 shows the variation in the rural and urban percentages of households reporting overnight and same-day trips over nine occupational categories of households. In rural areas, overnight trips were reported somewhat more frequently by households that were "professionals" by occupation (93.5%) and in urban areas senior officials and managers and clerks (93.2% and 93.1%).

Statement 3.17: Percentage of households reporting overnight and same-day trips* by household occupation						
Occupation	Percentage of households reporting trips					
	Rural			Urban		
	Overnight	Same-day	Both	Overnight	Same-day	Both
legislators, senior officials and managers (1)	92.9	98.9	99.1	93.2	99.0	99.5
professionals (2)	93.5	98.9	99.1	89.6	95.4	97.0
associate professionals (3)	83.3	98.9	99.1	88.2	96.9	98.4

clerks (4)	87.6	93.1	93.3	93.1	99.6	98.4
service workers and shop & market sales workers(5)	86.6	97.7	97.9	89.6	98.6	99.3
skilled agricultural and fishery workers (6)	88.7	98.3	99.1	82.4	95.0	98.4
craft and related trades workers (7)	86.2	98.3	99.1	86.2	98.3	99.4
plant and machine operators and assemblers (8)	89.2	98.9	99.1	85.7	99.1	99.6
elementary occupations (9)	86.8	99.4	99.6	82.7	95.7	99.6
All	87.6	98.9	99.1	85.7	96.9	98.4

Ref: Table 3 in Appendix A

*last 365 days

3.19 Household social group

3.19.1 The percentage of households, where at least one member made a trip (overnight/ same-day) during the last one year, provides a measure of the intensity of tourism activity. This percentage is occasionally referred to as $T_H(O)$ for overnight trips and $T_H(S)$ for same-day trips.

3.19.2 Statement 3.18 shows variation over social groups in the rural and urban percentages of households reporting overnight and same-day trips during a one-year period. It is seen that the social group ST carries the highest $T_H(O)$ & $T_H(S)$ figure for the urban area (i.e. 100%) where as in rural area 70.6% and 83.5% respectively. For rural area, in case of both overnight and same-day trips, the percentages for the different social groups, except for the category ST, deviate only very slightly from the all-groups average.

Statement 3.18: Percentage of households reporting overnight and same-day trips* by social group						
Social groups	Percentage of households reporting trips					
	Overnight Trips			Same-day Trips		
	Rural	Urban	Rural+Urban	Rural	Urban	Rural+Urban
ST	70.6	100.0	72.3	83.5	100.0	84.6
SC	84.3	81.2	83.8	99.7	91.8	98.5
OBC	87.9	85.9	87.4	99.3	97.3	98.8
Others	88.9	86.2	88.4	98.5	96.9	98.1
All	87.6	85.7	87.2	98.9	96.9	98.4

Ref: Table 5 in Appendix A

*last 365 days

3.20 Household type

3.20.1 Statement 3.19 shows variation over household (occupational) types in the rural and urban percentages of households reporting overnight and same-day trips during a one-year period. In case of same-day trips, there are no striking variations in the percentages in both rural and urban area. In case of overnight trips, the percentages for the four household types in urban area range from 82.3 for “others” to 90.6 for the self-employed.

Statement 3.19: Percentage of households reporting overnight and same-day trips* by household type		
Household type	Percentage of households reporting trips	
	Overnight Trips	Same-day Trips
Sector: Rural		
Self employed in non-agriculture	91.3	99.7
Agricultural labour	89.9	99.6
Other labour	85.2	98.3
self employed in agriculture	89.2	99.3
Others	86.6	98.5
All	87.6	98.9
Sector: Urban		
Self employed	90.6	98.0
Regular wage/salary earning	89.9	98.0
Casual labour	83.2	97.7
Others	82.3	94.5
All	85.7	96.9

Ref: Table 7 in Appendix A

*last 365 days

3.21 Household religion

3.21.1 Statement 3.20 shows the variation in TH(O) and TH(S) among households of different religions. The estimates for “Jains” and “Others” are based on 1 and 2 sample households respectively where as number of households for “Sikhs” and “Budhists” were “0” as these categories were very rarely found in the State. Estimated percentages of households reporting trips, for all other religions, are above 84. The percentage for individual religions rarely differed by more than 3 percentage points from the all-religions average. In rural areas, the largest three religious groups, Hindus, Muslims

and Christians had higher percentages reporting both overnight and same-day trips than other religions.

Statement 3.20: Percentage of households reporting overnight and same-day trips* by religion						
Religion	Percentage of households reporting trips					
	Overnight Trips			Same-day Trips		
	Rural	Urban	Rural+ Urban	Rural	Urban	Rural+ Urban
Hindu	86.7	85.2	86.3	98.5	96.3	98.0
Islam	90.7	88.1	90.1	99.9	98.9	99.7
Christian	87.1	84.9	86.6	98.8	96.5	98.3
Sikh	0.0	0.0	0.0	0.0	0.0	0.0
Jain.	100.0	0.0	100.0	100.0	0.0	100.0
Buddhism	0.0	0.0	0.0	0.0	0.0	0.0
Others	100.0	100.0	100.0	100.0	100.0	100.0
All	87.6	85.7	87.2	98.9	96.9	98.4

Ref: Table 6 in Appendix A

*last 365 days

3.22 Household economic level

3.22.1 Statement 3.21 examines whether the State percentages of rural and urban households reporting overnight and same-day trips vary with the sector. Percentage of households reporting overnight trips and same-day trips are highest in the rural sector.

Statement 3.21: Percentage distribution of households reporting overnight and same-day trips* over each sector.		
Sector	Percentage of households reporting	
	Overnight Trips	Same-day Trips
Rural	87.6	98.9
Urban	85.7	96.9
Rural+Urban	87.2	98.4

Ref: Table 8 in Appendix A

*last 365 days

3.23 Households visited by NRIs : Percentage distribution by impact of the NRI visit(s)

3.21.1 Statement 3.22 summarises the responses of households that had been visited by any NRI during the past one year to the question: What was the impact of the NRI visit (that is, on tourism activity of the household members)? The majority of households (nearly 64% in rural areas and 63% in urban) visited by NRI(s)

reported “no impact”. Nearly 9% of the rural and 12% of the urban households reported that the visit had resulted in their making atleast one trip themselves. 18% of the rural households and 17% of the urban households were willing but unable to make a trip due to other constraints.

Statement 3.22:Households visited by NRIs: Percentage distribution by impact of NRI visit			
Impact	Percentage of households		
	Rural	Urban	Rural+Urban
resulted into one or more trips	8.84	12.14	9.70
planning to make a trip in near future	5.79	2.96	5.04
willing to make a trip but could not make it due to other constraints	17.61	16.61	17.35
no impacts	63.79	62.82	63.53
cannot say	3.97	5.45	4.37
total	100.00	100.00	100.00

Ref: Table 4 in Appendix A

Chapter Four

Expenditure on Trips

4.0 All expenditures incurred by the surveyed households in connection with overnight and same day trips (made by any of their members, or members of other households) was recorded as expenditure on trips provided it was not incurred for productive purposes, are discussed in this chapter. Estimates were generated for average expenditure per trip and per overnight visitor-trip by sector of the reporting households, as well as separately for each leading purpose. The break-up of overnight and same-day trip expenditure over broad expenditure heads is also examined. For overnight trips, it is further investigated how the expenditure pattern varies with the leading purpose of a trip.

4.1 Expenditure per overnight trip and leading purpose

4.1.1 The average expenditure per overnight trip was estimated as Rs.1484/- for the rural population and Rs.1875/- for the urban population (Statement 4.1).

(Note: For same-day trips, data on expenditure was not collected separately trip-wise, hence the expenditure per trip could not be separated by leading purpose or any other trip characteristic.)

4.1.2 It was observed that, in case of both rural & urban population, the average expenditure per overnight trip was found considerably low for trips with “social” leading purpose (Rs.548/- for rural and Rs.909/- for urban) and it was the lowest among all the purposes used for classification of trips by leading purpose (See Statement 4.1). This may be due to the fact that the major place of stay of the visitor in 77% of visitor trips for the rural population and 73% of the urban population was with “friends and relatives” (Table 31).

4.1.3 Trips for “health and medical” purposes were expensive in rural as well as urban sectors. The urban population’s trips for “shopping” were the most expensive and in case of education and training, the rural population spent more compared to the urban

population.

Statement 4.1: Average expenditure per overnight trip by leading purpose			
Leading Purpose	Average expenditure per trip (Rs.)		
	Rural	Urban	Rural+Urban
business	2514	1789	2168
holidaying, leisure & recreation	2942	3523	3167
social	548	909	635
religious & pilgrimage	2028	2294	2107
education & training	2359	1983	2252
health & medical	5503	9385	6000
shopping	1768	30716	6649
Others	2480	3427	2770
All	1484	1875	1578

Ref: Table 43 in Appendix A

4.2 Percentage expenditure on overnight trips by leading purpose

4.2.1 Statement 4.2 gives the break-up of expenditure on overnight trips by leading purpose of trip, separately for the rural and urban populations.

Statement 4.2: Percentage break-up of expenditure on overnight trips by leading purpose			
Leading Purpose	Percentage of expenditure on overnight trips		
	Rural	Urban	Rural+Urban
business	1.23	2.00	1.45
holidaying, leisure & recreation	5.02	9.44	6.28
social	26.65	34.92	29.02
religious & pilgrimage	9.31	11.14	9.83
education & training	1.77	1.47	1.68
health & medical	51.09	32.03	45.64
shopping	0.25	2.07	0.81
Others	4.49	6.89	5.18
All	100.00	100.00	100.00

Ref: Table 43 in Appendix A

4.2.2 It was seen previously in this chapter that among trips with different leading purposes, expenditure per overnight trip, for both rural and urban travellers, was the lowest for “social” (leading purpose) trips. As such, the share of social trips was, in both the

sectors, only 26.65 & 34.92% (Statement 4.2), even though such trips accounted for 77% of all overnight trips for both the rural and Urban population.

4.2.3 “Health & medical” trips which accounted for 14% of all overnight trips of the rural population and about 6% in case of urban population had a share of about 51% in overnight trip expenditure for the rural sector and about 32% for the Urban sector.

4.3 Break-up of trip expenditure by broad expenditure head

4.3.1 Package component of trips: Trip expenditure in general has several components present in varying combinations: transport, food, accommodation, shopping, sight-seeing, etc. As is the practice in tourism activity, some of these components become commercially available in the form of a package. Visitors who avail themselves of such packages, for a whole trip or for part of it, cannot report the exact break-up of their total trip expenditure over the heads transport, food, accommodation, etc., but only the total expenditure incurred on the package component and the break-up of the remainder (non-package component). This imposes a constraint on the generation of estimates of the break-up of trip expenditure by its components.

Statement 4.3: Percentage break-up of expenditure on overnight and same-day trips by major group of items				
Category of expenditure	Overnight		Same day	
	RURAL	URBAN	RURAL	URBAN
package component	4.63	5.23	0.29	1.64
accommodation	3.98	8.00	0.06	0.15
food and drink	11.18	13.28	8.11	8.06
Transport	15.16	22.93	21.79	22.07
shopping	16.69	17.62	43.01	47.12
recreation religious etc	48.37	32.93	27.42	18.76
Others	2.21	2.86	22.37	14.63
Total	100.00	100.00	100.00	100.00

Ref: Table 43 & 45 in Appendix A

4.3.2 Statement 4.4 gives the percentage break-up of overnight and same-day trip expenditure by five broad heads -(1)

accommodation, (2) food and drink, (3) transport, (4) shopping and (5) recreation, religious, cultural, sporting and health-related activities - and a residual category. Apart from these, expenditure incurred as a package, as mentioned above, was made a separate category for the purpose of deriving the percentage break-up.

4.3.3 The percentage of package component was found as 5.23% in case of overnight urban sector and 0.29% in case of same day rural sector. For overnight trips, in both rural and urban sector, the share of “recreation, religious, cultural, sporting and health-related activities” component was found maximum (Rural: 48.37% and urban: 32.93%).

4.3.4 For same day trips, in both rural and urban sector, the share of “shopping” component was found maximum (rural: 43.01% and urban: 47.12%).

4.4 Leading purpose and trip expenditure pattern for overnight trips

4.4.1 The break-up of total expenditure has been shown separately in Statement 4.4 for trips with different leading purposes, for both the rural and the urban sector, which shows that, overnight trips with different leading purposes will not exhibit a uniform pattern of expenditure

4.4.2 In the case of Urban sector, “Transport” had an overall share of 22.93% and a share of 40.78% for “business” trips. Its share in expenditure on trips made for “Social” and “education & training” was 33.49% and 30.46% respectively.

4.4.3 In the case of Rural sector, “Transport” had an overall share of 15.16% and a share of 29.78% for “social” trips. Its share in expenditure on trips made for “religious & pilgrimage” and “education & training” was 25.45% and 17.84% respectively.

Statement 4.4: Percentage break-up of expenditure on overnight trips separately for trips with different leading purposes

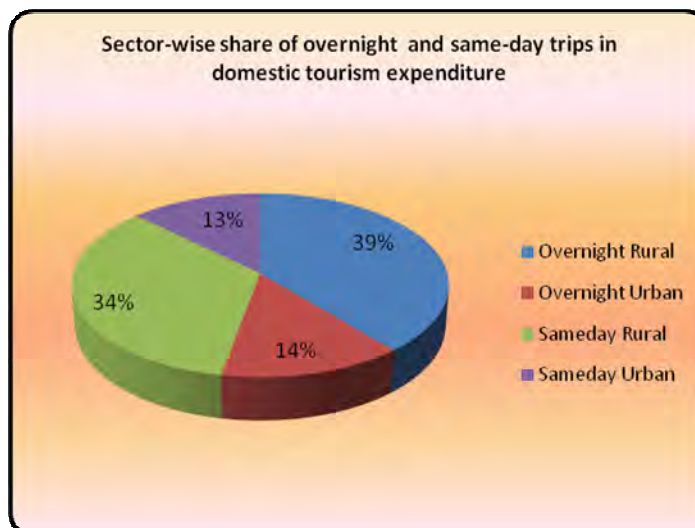

Category of expenditure	leading purpose

4.5 Break-up of domestic tourism expenditure by kind of trip and sector

4.5.1 The figure shows the share of overnight and same-day trips in total domestic tourism expenditure, broken up further by sector (rural/urban). Overnight trips are seen to account for a total of 53% of the total expenditure on domestic tourism,

39% being incurred by rural households and 14% by urban households. The share of same-day trips was 47% (34% incurred by the rural population and 9% by the urban).

The total share of the rural sector in domestic tourism expenditure was thus 73% and that of the urban sector, 27%.

Appendix A

Detailed Tables

Table No	Title	Page Number
1	Number of villages/blocks, households, Total no. of persons, separately for Rural and Urban	
2	Number of households reporting overnight visitor(s), number of overnight visitor(s), number of households reporting same day visitor(s) and number of same day visitor(s), both surveyed and estimated, separately for Rural and Urban	
3	Per 1000 distribution of households reporting overnight visitors and same day visitors by household occupation	
4	Per 1000 distribution of households which were visited by NRIs by impact of the NRI visit for each sector	
5	Number of households reporting overnight visitors, same day visitors, both surveyed and estimated, separately for each social group	
6	Number of households reporting overnight visitors, same day visitors, both surveyed and estimated, separately for each religion	
7	Number of households reporting overnight visitors, same day visitors, both surveyed and estimated, separately for each Household type	
8	Number of households reporting overnight visitors, same day visitors, both surveyed and estimated, separately for each Sector	
9	Per 1000 distribution of households who are aware of the 'Incredible India' campaign by quintile class of MPCE for each occupation (NCO) group	
10	Per 1000 distribution of households who are aware of the 'Tourism Promotional' campaign by quintile class of MPCE for each occupation (NCO) group	
11	Per 1000 distribution of households on awareness of the 'Incredible India' campaign by source separately for each State/UT	
12	Per 1000 distribution of households on awareness of the 'Tourism Promotional' campaign by source separately for each State/UT	
13	Per 1000 distribution of households who are aware of the 'Incredible India' campaign by impact of the campaign	
14	Per 1000 distribution of households who are aware of the 'Other Tourism Promotional' Campaigns by impact of the campaign	

15	Per 10000 distribution of households who rented out some portion of the house to tourists for at least one night during last 365 days by social group for each sector	
16	Per 10000 distribution of households who rented out some portion of the house to tourists for at least one night during last 365 days by NCO(1-digit) for each sector	
17	Per 1000 distribution of persons by number of overnight trips for each age group	
18	Per 1000 distribution of persons by number of overnight trips for each broad activity status	
19	Per 1000 distribution of persons by number of overnight trips for each level of Education	
20	Per 1000 distribution of persons by number of overnight trips for each Occupation	
21	Per 1000 distribution of persons by number of overnight trips for each NIC Section	
22	Per 1000 distribution of persons by number of Same day trips for each age group	
23	Per 1000 distribution of persons by number of Same day trips for each broad activity status	
24	Per 1000 distribution of persons by number of Same day trips for each level of Education	
25	Per 1000 distribution of persons by number of Same day trips for each Occupation	
26	Per 1000 distribution of persons by number of same day trips for each NIC Section	
27	Per 1000 distribution of overnight visitors by purpose for each broad principal activity status	
28	Per 1000 distribution of overnight visitors by main destination	
29	Per 1000 distribution of overnight visitortrips by purpose of trip	
30	Per 1000 distribution of overnight visitor trips by major mode of travel for each quintile class of MPCE	
31	Per 1000 distribution of overnight visitors by major type of stay for each sector	
32	Per 1000 distribution of same day visitors by purpose for each broad principal activity status	
33	Per 1000 distribution of same day visitors by main destination	
34	Per 1000 distribution of same day visitortrips by major mode of travel for each quintile class of MPCE	
35	Per 1000 distribution of same-day visitortrips by type of stay for each quintile class of MPCE	
36	Number of overnight trips and number of same day trips, both surveyed and estimated	

37	Per 1000 distribution of trips by type of trip for overnight trips and same day trips	
38	Per 1000 distribution of overnight trips by type of trip for each leading purpose	
39	Average duration (in terms of night spent) per overnight trip by starting and ending month	
40	Average no. of places visited per overnight trip by main destination	
41	Per 1000 distribution of same day trips by type of trip for each leading purpose	
42	Per 1000 distribution of same-day trips by leading purpose for each month	
43	Estimated Total expenditure(in Rs.'000) by categories of expenditure for each leading purpose of overnight trips	
44	Average expenditure(in Rs.) per overnight trip by categories of expenditure for each leading purpose	
45	Estimated Total expenditure(in Rs. '000) by categories of expenditure of same-day trips	
46	Average expenditure (in Rs.) per same-day trip by categories of expenditure	
47	Average expenditure(in Rs.) per overnight trip by leading purpose of trip

Appendix B

Sample Design and Estimation Procedure

Appendix B

Sample Design and Estimation Procedure

SAMPLE DESIGN

Outline of sample design:

A stratified multi-stage design was adopted for the 65th round survey. The first stage units (FSU) were the 2001 census panchayat wards in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups/ sub-blocks from each FSU.

Sampling frame for first-stage units:

For the rural sector, the list of 2001 Census panchayat wards for constituted the sampling frame. For the urban sector, the list of latest available Urban Frame Survey (UFS) blocks was considered as the sampling frame.

First-stage stratification

For rural sector, all villages of a district formed a separate stratum. In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Census 2001 town population. The stratum numbers and their composition (within each NSS region) are given below.

Stratum	Composition within each NSS region)
1	All towns with population > 50,000
2	All towns with population 50,000 - 99,999
3	All towns with population 1,00,000 - 4,99,999
4	All towns with population 5,00,000 - 9,99,999
5, 6...	Each million-plus city

Sub-stratification:

There was no sub-stratification in the rural sector and for strata corresponding to non-UFS towns. However, for all other urban

strata, each stratum was divided into two sub-strata as follows:
sub-stratum 1: all UFS blocks having area type 'slum area'
sub-stratum 2: remaining UFS blocks.

Allocation of FSU's among Strata/sub-strata:

A total number of 780 FSUs (504 panchayath wards and 276 urban blocks) was allocated for survey for the Kerala 'state central sample'. The total number of sample FSUs was allocated between two sectors in proportion to population as per census 2001 with 1.5 weightage to urban sector subject to the restriction that urban sample size did not exceed the rural sample size. Within each sector the sample size was allocated to the different strata in proportion to the stratum population as per census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Stratum-level sample size in the urban sector pertaining to strata belonging to UFS towns was further allocated to the 2 sub-strata in proportion to the number of UFS blocks in them with double weightage to sub-stratum 1, subject to a minimum allocation of 4 to each of the two sub-strata.

Selection of first-stage units:

As per census arrangement, the panchayath wards were arranged and FSUs were selected by circular systematic sampling with probability proportional to population for all rural strata. For urban strata x sub-strata (wherever applicable), the towns within the stratum were arranged in ascending order of population; then FSUs were selected by circular systematic sampling with equal probability for UFS towns. Within each stratum/ substratum, multiple of 4 FSUs were selected. Samples were drawn in the form of two independent subsamples and equal number of samples was allocated among the four sub rounds.

Selection of Ultimate Stage Units (USUs) within an FSU:

Large sample FSUs with approximate present population of 1200 or more were divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector, by

more or less equalizing present population of the FSU, as stated below.

Approximate present population of the sample FSU		No. of Hgs/Sbs formed
All district except Idukki	Idukki	
less than 1200 (no Hg/Sb)	less than 600 (no Hg/Sb)	1
1200 to 1799	600 to 899	3
1800 to 2399	900 to 1199	4
2400 to 2999	1200 to 1499	5
..... And so on And so on	

Wherever hamlet-groups/ sub-blocks were formed, two were selected from among them in the following manner - the hg/sb with the highest percentage share of population was always selected; one more hg/sb was selected from the remaining hg's/sb's by SRS. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks. The FSUs without hg/ sb formation were treated as sample hg/ sb number 1 All households listed in an FSU constituted the sampling frame of households

Second-stage stratification

Two cut-off points 'A' and 'B' (in Rs.), determined from NSS 61st round data for each NSS region for urban areas in such a way that the top 30% of the population had MPCE equal to or more than 'B' and the bottom 30% of the population had MPCE equal to or less than A, were used for second-stage stratification in the urban sector. All the households listed in the selected FSU/ hamlet-group/ sub-block was stratified into five second-stage strata (SSS) as shown below.

Rural

SSS 1	households having pucca dwelling structure and having at least one member, who performed at least one overnight trip during last 30 days
-------	--

SSS 2	households not having pucca dwelling structure and having at least one member, who performed at least one overnight trip during last 30 days
SSS 3	remaining households having pucca dwelling structure and having at least one member who performed at least one same-day trip during last 30 days
SSS 4	remaining households not having pucca dwelling structure and having at least one member who performed at least one same-day trip during last 30 days
SSS5	other households

Urban

SSS 1	households with MPCE \geq B and having at least one member, who performed at least one overnight trip during last 30 days
SSS 2	households with MPCE $<$ B and having at least one member who performed at least one overnight trip during last 30 days
SSS 3	remaining households with MPCE \geq B and having at least one member who performed at least one same-day trip during last 30 days
SSS 4	remaining households with MPCE $<$ B and having at least one member who performed at least one same-day trip during last 30 days
SSS5	other households

Allocation of households to different second-stage strata & Selection of households

SSS	number of sample households allotted for survey	
	FSU's without hg/sb formation	FSU's with hg/sb formation (for each hg/sb)
SSS 1	4	2
SSS 2	2	1

SSS 3	2	1
SSS 4	2	1
SSS5	2	1

From each SSS the sample households were selected by SRSWOR.

Notations

s = subscript for s-th stratum

t = subscript for t-th sub-stratum (only for UFS towns of urban sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (*panchayat* ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb, j = 1, 2, 3, 4 or 5 for Sch. 21.1

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

$D^* = 0$ if $D = 1$

= (D - 1) for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural stratum (= sum of sizes for all the FSUs of a stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including zero cases but excluding casualty for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU / hamlet-group or subblock of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\bar{X} , \bar{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU

belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious

Formulae for Estimation of Aggregates for a particular sub-sample and stratum / sub-stratum

Rural:

(i) For j-th second stage stratum of a stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Urban:

(i) For j-th second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) will be obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

Overall Estimate for Aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

Overall Estimate of Aggregates at State/UT/all-India level

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

Estimates of Ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio

$$\left(R = \frac{Y}{X} \right) \quad \hat{R} = \frac{\hat{Y}}{\hat{X}}$$

is obtained as

Estimates of Error: The estimated variances of the above estimates are as follows:

For aggregate \hat{Y} :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s) \quad \text{where } V\hat{a}r(\hat{Y}_s) \text{ is given by}$$

$$V\hat{a}r(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$$

for rural stratum, \hat{Y}_{s1} and \hat{Y}_{s2} being the stratum estimates for subsample 1 and 2 respectively and

$$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$$

for urban stratum, where \hat{Y}_{s1} and \hat{Y}_{s2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

For ratio \hat{R} :

$$(i) \quad M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[(\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for rural and

$$(ii) \quad M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for urban.

Where \hat{Y}_{s1} , \hat{Y}_{s2} and \hat{Y}_{st1} , \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively

for stratum 's' and sub-stratum 't'.

Estimates of Relative Standard Error (RSE)

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\text{Var}(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Multipliers

The formulae for multipliers at stratum/sub-stratum level for a sub-sample are given below:

sub-stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural	$\frac{Z_s}{n_{smj}} \times \frac{1}{z_{smi}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{Z_s}{n_{smj}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$
Urban	$\frac{N_{st}}{n_{smj}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{N_{st}}{n_{smj}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
