**ANNUAL REVIEW OF CROP STATISTICS SYSTEM IN
KERALA
THROUGH THE SCHEME FOR
IMPROVEMENT OF CROP STATISTICS
2016-17**

DEPARTMENT OF ECONOMICS & STATISTICS

KERALA

PREFACE

Collection and compilation of Agricultural statistics is one of the prime responsibilities of the States. The National Sample Survey Office (NSSO) under Ministry of Statistics & Programme Implementation, Govt. of India has the overall responsibility of providing technical guidance to the states in developing suitable survey techniques for obtaining timely and reliable estimates of crop area and yield, and imparting training to the State Govt. field personnel.

The scheme of Improvement of Crop Statistics (ICS) was taken up in the year 1973-74 with the objective of pointing out, through joint efforts of NSSO and State Governments, the deficiencies in the system of crop statistics by exercising technical supervision over the primary field work and suggesting remedial measures for strengthening the system. The report Annual review of crop statistics system in Kerala through the scheme for improvement of crop statistics 2016-17 contains the findings of the ICS scheme in Kerala during the Agricultural year 2016-17.

This report is being prepared by the Sample Check section in the EARAS unit of the Directorate of Economics and Statistics, Government of Kerala. I express my sincere gratitude to Sri.K.Damodaran (Addl: Director), Smt.C.S. Latha Kumari (Joint Director) Smt.Sangeetha. R (Assistant Director), Sri. T.B. Raju (Research Assistant), Smt. Vidya.U.B and Smt.Sheeja.N (Statistical Assistants - Grade I) for their dedication and painstaking efforts for bringing out this report.

**V.RAMACHANDRAN
DIRECTOR GENERAL**

I. INTRODUCTION

Scheme for Improvement of Crop Statistics (ICS)

The scheme ICS was initiated with the objective of pointing out the deficiencies in the system of collection of area and yield statistics through the joint efforts of NSSO (FOD) and State Agricultural Statistics Authority (SASA) and to suggest remedial measures. The scheme Improvement of Crop Statistics was introduced from Rabi season of 1973-74. The responsibility of the data collection rests with the State Government. Crop statistics has two major components (1) Area sown and (2) Average yield. Land use statistics is collected by Area Enumeration Survey and the yield rate of principal crops are estimated through General Crop Estimation Survey.

In this report the position of crop production and procedure taken for collecting data, Area enumeration and Yield rate and the methods for data collection are contained. The steps taken for Improving Crop Statistics 2016-17 are also included. The reports also included the details of equipment supplied, experiments planned under General Crop Estimation Survey (GCES) and response rate etc. Besides, the findings of sample check under ICS scheme on working of the system are also brought out indicating the remedial measures to rectify the deficiencies observed.

1. The Scheme for Improvement of Crop Statistics (ICS)

The scheme accomplishes its objectives by conducting sample check on the primary fieldwork through

- (1)Physical verification of the crop enumeration done by the investigator in a sample of 80 Investigator zones in each season.
- (2)Checking the aggregation of crop wise area in the Form I diary and
- (3)Inspection of crop cutting experiments at harvest stage in an agricultural year.

The sample checks are undertaken by the supervisory staff of NSSO (FOD) and the Supervisory staff of DES (ADOs) on matching basis in two non-overlapping samples. The basic data collected through these sample checks are being exchanged between the two agencies.

The schedules viz., AS 1.0, AS 1.1 and AS 2.0 are used for recording the findings of sample check on (a) area enumeration (b) area aggregation and (c) crop cutting experiments respectively. The filled in schedules are sent to both agencies on reciprocal basis for tabulation and analysis.

The programme of sample check on area enumeration consists of selecting and locating 4 clusters in each selected IV zone. The supervisory officer from NSSO or DES identifies the differences on reporting and recording the crop in the concerned survey numbers during each season and also find out the variation on reporting the land utilisation by all means.

The concurrent inspection of crop cutting experiments at harvest stage consists of examining the conduct of the experiments by the investigator conforms to the procedures prescribed under GCES. The inspection covers aspects such as selection of field and random coordinates, marking of experimental plots of specified shape and size, harvesting of plants, weighment of the produce etc. In addition, regarding the supply and use of equipments for conducting the experiments, training received by the primary workers, crop condition, use of inputs etc. are also ascertained.

The data collected through the sample check are analysed facilitating factual appraisal of the system with reference to the following.

- (1) Timeliness in completion of area enumeration and working of the EARAS Scheme
- (2) Discrepancies in recording crop area, their frequency and impact.
- (3) Discrepancies in recording ancillary information, their frequency and impact.

(4) Discrepancies in crop abstract and their impact.

(5) Departures from the prescribed procedure of conducting crop cutting experiments and their impact.

The yield data from the supervised experiments are also used for obtaining the average yield rates of specified crops and their standard errors. The calculation of standard errors and their study is helpful in assessing the adequacy of the sample size, trend of changes in yield rates and in planning other allied studies.

2.General Crop Estimation Surveys (GCES)

GCES consists of performing a specified number of crop cutting experiment in randomly selected fields. Crop cutting experiment, conducted under well designed estimation survey, is an effective technique for estimating the average yield by selecting the field, randomly locating a plot of a specified size, harvesting, threshing, weighing and recording the weight of the produce from the plot.

3.Timely Reporting Scheme (TRS)

The Ministry of Agriculture initiated TRS in 1968-69 in land record states in order to reduce the time lag between (a) completion of sowing and the availability of estimates of area sown and (b) the completion of harvesting and availability of estimates of production in respect of important crops. Being a non-land record state Kerala, Agriculture Statistics is being collected under EARAS Scheme.

4.Establishment of an Agency for Reporting Agricultural Statistics(EARAS)

Under the scheme EARAS, collection of data for estimating area and yield statistics for every agricultural year by way of complete enumeration of the villages of the State in a phased manner powering 20 % of the selected villages was done since 1975-76. The first cycle of the survey was completed within a

period of six years 1975-76, 1980-81 and the second cycle in 1985-86. During 1993-94 the Investigator Zones were reorganised by suiting the villages to Panchayats. From 2000-01 onwards the part Panchayats were discontinued and each Investigator Zone was formed with full Panchayat/Panchayats. Cluster sampling method is being followed in EARAS Scheme from 2000-01 in order to obtain representation from the entire area of the Investigator Zone. The production of crops are estimated on the basis of scientifically designed crop cutting experiments conducted by the Investigators under the supervision of Statistical Inspectors/Taluk Statistical Officers/ District Level Officers.

5.District Level Committee (DLC)

District Level Committee is also functioning in every district with representatives of NSSO and State Government officials of DES. The main objective in forming DLC is to probe into the reasons for the differences between the crop wise and non-crop area figures recorded by the State primary worker during the crop inspection and those observed by the Central/State Supervisor during sample check on area enumeration under the scheme Improvement of Crop Statistics (ICS).

II. Analysis of Data-2016-17

Check on Area Enumeration and Area Aggregation

Every year 80 non-overlapping Investigator Zones each under the Central and State samples are selected for sample check on Area Enumeration and Area Aggregation. The sample checks are conducted immediately after the completion of area enumeration survey under EARAS scheme.

1. Response in Sample Check on Enumeration of Area during 2016-17

The response in sample check on area enumeration i.e., the number of IV zones for which filled in schedules were received during 2016-17 is given in Table 1. The response was 100 % for all season for all district for Central Sample & State Sample.

2. Completion of Area enumeration under EARAS.

The Investigator is required to complete the EARAS area enumeration according to a prescribed time schedule and to submit the filled up schedules immediately after the completion of work. The sample checks are conducted after the completion of area enumeration.

Timeliness in completion of area enumeration during 2016-17 is given in **Table-2**, 96.25% for central sample for each season and 100 % for Autumn, Winter and 92.5% in Summer season for State sample. 3.75% and 2.5% and 3.75% enumeration work during Autumn, Winter & Summer season are completed after the due date & the date of completion of 1.25% work of Winter season is not known for the Central Sample. In the State sample 7.5% during summer season were completed after the due date.

3. Submission of EARAS Statement

The details of season wise submission of EARAS statement during 2016-17 are indicated in Table 3. Timely submission of these statements still needs considerable improvement in almost all districts.

4. Discrepancies in recording crop and crop area

Details of crop and its area reported by the Investigator in the state system and with the corresponding entries made by the technical personnel associated with the ICS programme reveal the following type of discrepancies.

- (1) Non-reporting of crops actually grown (E1)
- (2) Reporting of crops actually not grown (E2)
- (3) Reporting of incorrect area of crops (E3)

The percentage of Survey nos. in which different types of discrepancies in recording paddy area by the investigator during Autumn, Winter and Summer for the year 2016-17 are given in Table- 4. The error, which non-reporting of the actual grown area of the crop (E1) and Reporting of crops actually not grown (E2) is 0.41% during winter season for State sample. Reporting of incorrect area of crops (E3) is 11.56%, 4.88%, 0.77% for Autumn, Winter and Summer respectively for state sample. For Central Sample (E1) is 0.96% for Autumn season, 2.86% for Summer season and only 0.63% (E3) for Winter season.

5. Discrepancies in recording variety particulars of seed used

Information on distribution of survey numbers as per the type of seed used for paddy during Autumn, Winter and Summer is given in Table 5(a), 5(w) and 5(s) respectively. There is a slight discrepancy in Ernakulam and Kozhikode districts during Winter season regarding the State sample. There are no discrepancies in Autumn and Summer season for the State Sample. Regarding the Central sample there is a slight discrepancy in Kottayam district for autumn and summer season.

III. Check on Crop Cutting Experiments

1. Sample Check on Crop Cutting Experiments.

Table 6 reflects the percentage of crop cutting experiments during each season for each district for the year 2016-17. For Central Sample the response is 100% for Autumn, Winter & 98 % for Summer season and for State sample 100% for Autumn, Winter & 99 % for Summer season.

2. Distribution of number of experiments conducted by important inputs

Table 7(i), 7(ii) and 7(iii) shows the details of paddy crop cutting experiments conducted according to the percentage of experiments, irrigated, sown with high yielding varieties of seeds and applied with fertilizer. More care may be given to attend the programme of ICS and procedure followed by the supervisory officer in time. The extent of participation at harvest stage is presented in the table.

3. Procedural Deviations and Discrepancies

At the time of Sample Check work the officer who attends may examine, if there is any deviation from the guidelines and procedure, most probably occur on crop cutting experiment.

Incidences of deviation and departure observed during the sample check programme for each crop are:

E1 – Error in selection of survey/ sub-survey numbers

E2 – Error in selection of field within survey/ sub-survey numbers

E3 – Error in reporting seed variety

E4 – Error in reporting seed rate.

E5 – Error in reporting irrigation particulars

E6 – Error in reporting application of fertilizers

E7- Error in reporting application of manures

E8 - Error in reporting application of pesticides

E9 -Error in reporting measurement of field

- E10- Error in checking random numbers
- E11- Error in location of plots
- E12- Error in plot dimensions
- E13 - Error in weightment of produce
- E14 - Inadequate arrangement for storing the produce for driage
- E15-Error in reporting proportion of experimental crops in mixture/ wrong reporting of constituents in mixture and
- E16-any one of the items missing

4. Supply and use of Crop Cutting Equipments

The information on supply and use of crop cutting equipments such as Tapes, Pegs, Balance and set of Weights collected during the Sample Checks Survey 2016-17 is presented in Tables 16 (i) & 16(ii). In most of the districts standard equipment supplied is used and some district was in a practise to use non-standard equipments on which the experiments to be left.

IV. Estimation on Average Yield Rates

Estimated yield rates of high yielding and other varieties of crops for irrigated and unirrigated categories and crop-wise rate of application of fertilizers and differential yield rates according to inputs for paddy during Autumn, Winter and Summer for Central and State samples are given in the Tables 8 (iii), 8(iv), 8(v), 8(vi), 9(iii), 9(iv), 9(v), 9(vi), 10 (iii), 10 (iv), 10(v) & 10 (vi).

Crop wise number of experiments planned for Sample Check at harvest and the response received variety wise estimated yield rates for irrigated and unirrigated categories, crop-wise rate of application of fertilizers and yield rates according to inputs for central and state samples for the whole year crops Banana, Tapioca, Coconut, Pepper and Areca nut are given in the Tables.

Comparison of ICS and GCES yield Estimates

The yield rates of rice under ICS and GCES during the year 2016-17 for district level for central and state samples are given in Table 17(i).

Trend of yield rate for Rice under ICS and GCES during Autumn, Winter and Summer for the year 2016-17 are given in Chart 7, 8 and 9 respectively. District wise yield rate of Rice under GCES and ICS are given in Chart 10,11 and 12 respectively. Season wise yield rate under GCES and ICS for paddy is given in Chart 13.

Yield rates of rice under ICS are lower as compared to GCES during Autumn and Summer season. The yield rates of important crops under GCES and ICS for the year 2016-17 is given in Table 17(ii) & 17(iii). A graphical representation of yield rates of Tapioca, Banana, Coconut, Pepper and Areca nut are given in Chart 14 to 18. A graphical representation of Crop wise yield rates of important crops during 2016-17 is given in Chart-19.
