Preface

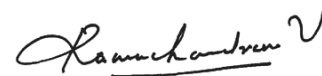

Department of Economics and Statistics (DES), Kerala has been participating National Sample Surveys (NSS), conducted nationally by NSSO, by collecting data from independent samples adopting the same sampling design, concepts and definitions and schedules. The Household Consumer Expenditure Surveys of National Sample Survey (NSS) are the primary source of data on various indicators of level of living of different segments of population.

The report 'Household consumption of various goods and services in Kerala 2009-10' is based on data of 8th NSS quinquennial survey on Household Consumer Expenditure, carried out during July 2009- June 2010 (66th round NSS). In the report, consumption patterns are studied in greater detail. Monthly Per Capita Consumer Expenditure estimates are presented here for all items of consumption for which information was collected during the survey, along with the estimated proportion of households consuming each item during last 30 days and their relative standard errors. Estimates are presented at state and district levels, separately for rural and urban sectors. State level estimates presented in the report are based on state sample data and district level estimates are based on central and state sample pooled data of the survey. The method of pooling has been discussed extensively in the report: Household Consumer Expenditure & Employment Unemployment situation in Kerala based on NSS 66th round central and state sample pooled data, published by DES. The present report contains three chapters and three appendices. The main findings relating to the estimates are presented in chapter three.

The technical assistance provided by NSSO, Government of India and the cooperation extended by the sample households is acknowledged. I use this opportunity to place on record the work done by the supervisors, field staff who worked hard to make the survey a success. I also acknowledge the efforts made by the NSS Division in the directorate in bringing out the report in this form.

I hope that this report will be useful to the planners, policy makers, academicians and researchers. Suggestions for improvement of the content of the report will be highly appreciated.

INTRODUCTION

1.1 Background

The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

The household Consumer Expenditure Survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 66th round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61st round (July 2004 - June 2005). DES Kerala is a partner in these surveys. DES conducted the 66th round survey for a one and half sample size compared to the central sample.

1.2 Objective of the survey

The NSS Consumer Expenditure Survey (CES) aims at generating estimates of average household Monthly Per Capita Consumer Expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at National and State/UT level, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population, and are used extensively for the study of poverty and inequality. Other uses of the CES include the use of budget shares as revealed by the NSS CES to prepare the weighting diagram for official compilation of Consumer Price Indices (CPIs), and the measurement of elasticity or responsiveness of demand to change in total expenditure. The data on quantities of consumption of different food items are used to study the level of nutrition of populations of different regions and disparities therein, and trends in nutritional intake over time.

1.3 Contents of this report

The household consumer expenditure schedule used for the survey collected information on quantity and value of household consumption with a reference period of last 30 days

preceding the date of interview. To minimize recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items.

In this report consumption patterns are studied in greater detail, as far as the item classification adopted in the schedule of enquiry permits. Monthly per capita expenditure estimates are presented here for all items of consumption for which data was separately recorded in the schedule, along with the estimated proportions of households consuming each item during the last 30 days and their relative standard errors. Estimates are presented at state and district levels, separately for rural and urban sectors. State level estimates presented in the report are based on state sample data and district level estimates are based on central and state sample pooled data of the survey. The method of pooling has been discussed extensively in the report: “Household Consumer Expenditure & Employment Unemployment situation in Kerala” based on NSS 66th round central and state sample pooled data, published by DES.

Following the present introductory chapter, Chapter Two explains the concepts, definitions and procedures of data collection and tabulation that are relevant to the study of nutritional intake. Chapter Three presents the salient findings on quantity and value of consumption of various goods and services, and on proportions of households possessing specific durable goods. The item-level estimates that are given for the State and its districts are available in Appendix A. Appendix B explains in detail the sample design and estimation procedure followed. Appendix C consists of the schedules of enquiry (Schedule 1.0, Type 2) that was canvassed in the surveyed households.

1.4 Features of the survey: schedules of enquiry

The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity and value of household consumption. The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert

Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption.

The present report is based on Schedule Type 2 only. This means that the data used for this report were collected with the following reference periods: Category I items: Last 365 days; Category II items: Last 7 days; Category III items: Last 30 days.

1.5 Features of the survey: scope and coverage

Geographical coverage:

The survey covered the whole of the state of Kerala

Population coverage:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.3.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

Sample size

Sample size: first-stage units: As is usual in the regular NSS rounds, Panchayath wards were the first stage units for Kerala State. For rural Kerala, 492 panchayath wards formed the state sample for this round. In the urban sector, the allocation for the state sample was 347 blocks.

Sample size: second-stage units: For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. While selecting the households in each selected first stage unit, the second-stage

stratification of households is in-built in the sample design. The features of the sample design are explained in Appendix B.

Table T1 shows the numbers of panchayath wards and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed. The samples surveyed by the state officials are called the “State sample” and the samples surveyed by the officials of NSSO are called the “Central sample”.

CONCEPTS and DEFINITIONS

2.1 Conceptual framework

2.1.1 Reference period: The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

2.1.2 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.1.2.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.1.2.2 For evaluating household consumption of all other items, a different approach is followed: the expenditure made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

2.1.2.3 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

2.1.2.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.1.2.5 To simplify data collection, consumption of food processed in the home from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.1.3 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item,

and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.2 Monthly per capita expenditure (MPCE)

2.2.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.2.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure \div household size). This measure serves as the indicator of the household's level of living.

2.2.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

2.3 Other concepts and definitions

2.3.1 **Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential

staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

2.3.2 Household size: The size of a household is the total number of persons in the household.

2.3.3 Deciles and decile classes of MPCE: The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 “decile classes of MPCE” as follows: those with MPCE below the 1st decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1st decile to the 2nd decile (the next 10%), from the 2nd decile to the 3rd decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States.

2.3.4 Uniform Reference Period MPCE (or MPCE_{URP}): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of “last 30 days” (preceding the date of survey).

2.3.5 Mixed Reference Period MPCE (or MPCE_{MRP}) This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of “last 365 days”, and expenditure on all other items is recorded with a reference period of “last 30 days”.

2.3.6 Modified Mixed Reference Period MPCE (or MPCE_{MMRP}) This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of “last 7 days”, expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of “last 365 days”, and expenditure on all other items is recorded with a reference period of “last 30 days”. *These in fact, are the reference periods that were used in Schedule Type 2 of the 66th round, from which the tables of this report have been generated.*

2.3.7 Consumption from PDS: For four consumption goods – rice, wheat, sugar and kerosene – consumption from “PDS purchase” and consumption from “other sources” were recorded against separate items in the schedule. Here PDS stands for Public Distribution System, which means the distribution of some essential commodities by the government at subsidised rates through ration shops, fair price shops and control shops. These shops may be owned by the government, local government, a government undertaking, the proprietor of a firm, co-operatives

or private persons (individually or jointly) or other bodies like club, trust, etc. The following procedure was followed while classifying a *purchase* as “PDS” or otherwise. “Super Bazaars” and co-operative stores were not generally be included under public distribution system. However, when these also sold rationed commodities at controlled prices against ration cards, they were taken as ration shops for particular commodities. For kerosene, “PDS” also included kerosene depots selling kerosene at controlled prices. Distribution of some controlled price commodities such as kerosene may in some areas be made without a system of presentation of ration card. Except in such situations, a purchase which was not made against a ration card was not considered as a PDS purchase. A purchase was considered as “PDS” irrespective of whether the household had used its own ration card or that of some other household. Purchase from PDS shops at prices higher than the PDS prices was also considered as purchase from PDS as long as the price paid was perceptibly lower than the market price.

NOTES ON COVERAGE OF DIFFERENT CONSUMPTION ITEMS 5

106 Other rice products: Foods which are obtained from rice by splitting, frying, powdering, or parching of the grain. Rice used for home preparation of sweets, etc., is shown against “rice” and not against this item.

114 Other wheat products: Does not include wheat preparations like biscuits, cakes, etc., which are shown separately in “beverages, etc.”

117 Maize products: This includes cornflakes, popcorn, etc., made of maize.

118 Barley products: This includes *sattu* prepared by frying and powdering of barley.

129 Cereals: Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether. Note also that the estimate of cereal consumption does not include the cereal content of food that is received by the household from outside in the form of meals obtained free or by purchase, or as cereal preparations or snacks (e.g. in purchased burgers, samosas, etc). Such food is accounted in “beverages, refreshments and processed food”. To the extent that such food forms part of the household’s consumption, its cereal consumption is understated in the estimate of cereals provided.

⁵ The number at the start of each paragraph is the code used for the item in the schedule of enquiry (see Appendix D: Schedule 1.0).

139 Cereal substitutes: This item includes tapioca, when consumed as a substitute for cereals, as is common in some parts of the country. Jackfruit seed, *mahua*, etc., when consumed as substitute

for cereals, will also be included here. Potato or sweet potato consumed as substitutes for cereals are, however, not shown here but included in “vegetables”.

150 Gram products: This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, a separate item (151).

152 Other pulse products: Includes soyabean meal and soya flour.

160 Milk: liquid: This covers milk as directly obtained from cow, buffalo, goat or any other livestock. Milk sold in bottle or polypack, as well as readily drinkable flavoured and bottled milk, is included. Milk transformed at home into curd, casein, *ghee*, butter, etc. for the purpose of household consumption is also included. Milk used in home preparation of sweetmeats, etc., is also accounted here.

161 Baby food: This covers only those baby foods of which the principal constituent is milk.

166 Ice-cream: This category covers only ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included.

190-194, 199 Edible oil: Excludes edible oils used for toilet purpose by the household.

268 Other fresh fruits: This includes sugarcane consumed like fruits.

296 Fruit juice and shake: Excludes fruit juice obtained at home by crushing the fruit.

298 Biscuits: This includes not only all kinds of biscuits but confectionery such as chocolate, toffee, lozenge, etc., and sugar substitutes like saccharine.

301 Prepared sweets: Excludes sweets prepared at home; consumption of such sweets is accounted against the ingredients.

302 Cooked meals received as assistance or payment: Meals received directly as full or partial payment in kind is included here, as well as (number and imputed value of) meals received free of charge from office or factory canteens. Further, (number and imputed value of) all meals received as assistance from Government, NGOs and charitable organizations, including meals received by schoolchildren as part of the Midday Meal scheme, are covered by this item.

303 Cooked meals purchased: This refers to cooked meals purchased from the market (e.g., from hotels and restaurants), as well as from office and factory canteens on payment. Valuation is at the purchase price (subsidized or otherwise).

305-308 Pickles, sauce, jam, jelly, etc.: Excludes pickles, jam, etc. prepared at home; these are accounted against the ingredients (flour, sugar, vegetables, oil, etc.).

308 Other processed food: Includes items like purchased snacks, food packets, chowmein (Cooked), soup powder, etc.

309 Beverages, etc.: Short for “beverages, refreshments and processed food”.

312 Ingredients for *pan*: Includes *supari*, lime, *katha*, etc., but excludes tobacco, *zarda*, *surti*, *kimam*, etc. even if consumed with *pan*, as these are accounted in the tobacco group.

322 Leaf tobacco: Includes all leaf tobacco consumed in any form, and also tobacco leaf burnt and powdered for brushing teeth.

330 Ganja: Includes *ganja* consumed in the form of cigarettes.

332 Country liquor: Note that country liquor prepared at home from its ingredients and consumed is accounted against the ingredients.

335 Other intoxicants: Includes drugs used for intoxication but excludes drugs used for medicinal purposes.

342 Electricity: Includes meter rent and surcharge for electricity. If electricity is generated at home using a diesel or petrol generator, consumption is not accounted against this item but against diesel or petrol.

352 Gobar gas: The value of gobar gas is imputed on the basis of value of inputs used for manufacturing gobar gas.

379 Clothing: Excludes raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are shown against “tailor” under “consumer services”. Imported ready-made garments, even if purchased second-hand, are shown as first-hand purchase. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

389 Bedding: Apart from bedding proper such as bed sheets, pillows and mosquito nets, this includes rugs, curtains, towels, mats, cloth for upholstery, etc.

390-395, 399 Footwear: This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

400, 401 Books, journals: Apart from books purchased for educational purposes, these items include novels and other fiction.

402 Newspapers, periodicals: Excludes newspapers and periodicals purchased second-hand, which, along with second-hand books, etc., are accounted against item 401.

404 Photocopying charges: Excludes photocopying charges incurred for non-educational purposes, which are accounted in item 491: miscellaneous expenses.

408 Other educational expenses: This includes expenditure on computer training, internet (exclusive of telephone charges); fees for music, dancing, swimming schools, etc; schools for typing, shorthand, etc; and training in physiotherapy, nursing, etc.

409 Education: This includes expenditure on books and journals, newspapers, paper, pen, pencil, etc., magazines, novels and other fiction, tuition fees, expenses on training in computer, typing, shorthand, music, nursing, etc., and expenditure on Internet other than telephone charges. All compulsory payments collected by educational institutions at the time of admission or along with the regular fees are regarded as part of the expenditure for education and included in “education”, even if termed “donations” by the institution collecting them. True donations to the school made voluntarily as charity are, however, excluded from consumer expenditure.

410-429 Medical: institutional and non-institutional expenditure: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (noninstitutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

468 Other washing requisites: This includes brushes, Scotch Brite and other utensil cleaners, steel wool, toilet cleaners, Pheneol and other floor cleaners, etc.

480 Domestic servant/ cook: This includes the value of both cash and kind payment. Imputed value of meals prepared in the home and consumed by a domestic servant/ cook is included here.

481 Attendant: This item records expenditure incurred on persons engaged by the household to look after an ailing member, or a child, or an aged person in the household. It excludes payment for medical services rendered by a nurse, even if performed within the household; such payment is accounted against item 424: other medical expenses.

491 Miscellaneous expenses: This includes expenses such as application fees for employment, etc., subscriptions to societies and similar organisations, e-mail charges, fax charges, photocopying charges (other than for education), cost of water purchased through tanker, porter, etc., but not insurance premium payments, which are not included in consumer expenditure.

496 Other consumer services excluding conveyance: Includes services of driver, coachman, cleaner, cobbler, blacksmith, unskilled labourers, etc., commission paid to the broker for purchase or sale of second-hand car/scooter etc., reconnection charge for electric/telephone line, and all other consumer services excluding conveyance.

513 Other conveyance expenses: Includes animal feed for animal-drawn carriage or vehicle. Does not include driver's or cleaner's salary, or garage rent.

519 Conveyance: Excludes expenditure on journeys undertaken on official or business tours, but includes journeys to commute to and from place of work. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

520 House rent, garage rent (actual): In case of quarters provided by the employer (including government accommodation), the portion of monthly emoluments forfeited on account of occupation of quarters is included in monthly house rent expenditure. *Salami/pugree* is not included in "rent".

521 Hotel lodging charges: Excludes expenditure on hotel stay during business tours and official tours covered by travelling allowance paid by the employer.

523 Other consumer rent: This item covers hiring charges for consumer goods like furniture, electric fans, crockery, utensils and charges for decoration on ceremonial occasions.

539 House rent, garage rent (imputed): For a household that resides in a house (or uses a garage) which it either owns or otherwise occupies without paying any rent, the value of this is imputed on the basis of prevailing rate of rent for similar houses in the locality or surrounding areas. This information is obtained for urban households only. "Imputed rent" is defined as zero for households which occupy hired accommodation. Estimate of per capita imputed rent (for non-hired accommodation) is, however, computed taking both non-zero and zero figures in the calculation. Note also that imputed rent is not included in the computation of household consumer expenditure and MPCE.

540 Water charges: This item covers water charges paid to the municipality or other local bodies. It does not include the cost of water purchased through tanker, etc.

541 Other consumer taxes and cesses: This category includes road cess, *chowkidari* tax, municipal rates, other taxes and cesses paid by the household as a domestic consumer, and consumer license fees such as fees paid for possession of firearms, vehicles, etc. It does not include income tax or sales taxes.

550-649, 659 Durable goods: Items included here all have a lifetime of one year or more.

However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in "other household consumables". Consumption expenditure on durable goods includes both expenditure on purchase and expenditure on repair and construction of

household durables. For land and residential building, only expenditure on repair and construction is included.

2.4 A note on data comparability

2.4.1 It was mentioned in Chapter One, Section 1.5, that reports similar to the present one are available based on data collected in the 50th (1993-94), 55th (1999-2000) and 61st (2004-05) rounds of NSS. In this context the following observations need to be made regarding comparability of data presented in this report with those from earlier rounds.

2.4.2 Consumption data collected on the same item from the same population have been found to vary depending on the length of the reference period used. One reason for the variation is that even when reporting is perfect, the use of short reference periods produces data reflecting fluctuations in consumption at the level of individual households. The level of consumption of salt by a household may be the same every week, but this may not be true of the consumption of fish or fruits, and certainly not of the consumption of clothing (as defined in NSS surveys) or durables. Use of longer reference periods such as a year irons out the short-term fluctuations and produces data that exhibits less variation over households.

2.4.3 Averages of consumption level for large populations should not be affected by the abovementioned systematic differences in inter-household variability found in data collected with different reference periods. However, averages of value and quantity of consumption also exhibit systematic differences for reasons which are more complex and less predictable. Data collected with longer reference periods may be affected by recall lapse. The term recall lapse covers not only the inability to remember the fact that a certain item was consumed but also the inability to remember the exact time when an item was consumed. While the former kind of error causes under-reporting of consumption, the other may cause either under- or over-reporting.⁶

⁶ The tendency to report items consumed outside the reference period as consumed within the reference period (called "telescoping") is common, and causes over-reporting.

2.4.4 The data on food, pan, tobacco and intoxicants collected through Schedule Type 2 of this survey differs from that collected in the earlier quinquennial surveys in that a reference period of "last 30 days" was used only for cereals, pulses, milk, sugar and salt, and for all other food items, as well as for pan, tobacco and intoxicants, a reference period of "last 7 days" was used. This was according to the recommendations of an Expert Group that had been formed to suggest a suitable reference period for each item of consumption. The Expert Group had noted that a 7-day reference period gives somewhat higher estimates of per capita consumption for the item groups for which it is used, and hence for the food group as a whole, as well as of household MPCE (all items) itself, but expected these estimates to be closer to the true consumption levels of households than are obtainable by the usual (30-day recall period) method.⁷ Users of the present

report interested in studying trends in consumption level over time would need to bear this fact in mind.

2.4.5 In case of clothing, footwear, education, medical care and durables (Category I items in Chapter One, Section 1.6), the reference period used in Schedule Type 2 of the 66th round was “last 365 days”. This was also the practice followed in the 55th round. In the 61st round, as well as the 50th), two sets of consumption data were collected from each surveyed household on the Category I items – one for “last 30 days” and the other for “last 365 days”. The 61st round report gives estimates based on “365 days” for items of durables, and estimates based on both data sets for other items. Clearly, only the “365 days” estimates should be used for comparison with the present round’s estimates. However, it needs to be mentioned here that when data are collected with a double reference period from the same household, the use of one reference period should be assumed (unless proved otherwise) to have an influence on the data collected with the other reference period.

2.4.6 For these reasons, comparisons with past data have generally been avoided in the present report, especially for estimates relating to food items. However, some discussion of changes over time has been attempted for estimates for items of miscellaneous goods and services – where “last 30 days” has been used in all the quinquennial surveys – and for estimates of “possession of durable goods” which are expected to be unaffected by reference period problems.

3

Summary of Findings

3.1 Introduction

As the household consumption of various goods and services in Kerala during the period of the survey was collected with three reference period of preceding 7 days, 30 days and 365 days for specified set of items of consumption basket, 66th round NSS brings out three different estimates of MPCE viz. $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ which have been described in chapter 2. Though there are three estimates of MPCE, the detailed results presented in this report are based on $MPCE_{MMRP}$ as it uses the reference period recommended by Expert Group on Non-Sampling Errors after suitable experimentation.

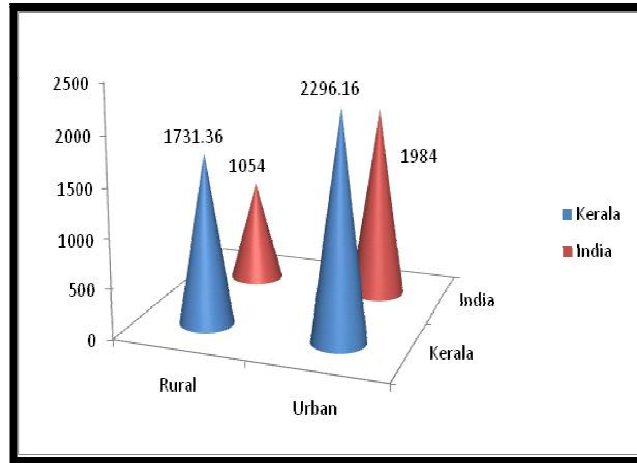

The discussion in this chapter covers average $MPCE_{MMRP}$, per capita expenditure estimates for 344 different items of consumption, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items and Monthly per capita quantity of consumption of selected commodities. These estimates are given separately for rural and urban areas of all 14 districts of Kerala. The district level estimates presented in this report are based on central and state sample pooled data of NSS 66th round. The method of pooling has been discussed extensively in DES Report no. 66/1 (say): Household Consumer Expenditure & Employment Unemployment situation in Kerala based on NSS 66th round central and state sample pooled data. The estimates of MPCE of food, non-food and total presented in this report are slightly differing from that of presented in report no.66/1 due to the issue of non-additivity of the component estimates with the estimate of total. To obviate this problem, we generated the pooled estimates of components first and then derive the estimate of total as sum of estimates of components.

3.2 Average MPCE

Average MPCE in 2009-10 was estimated as Rs.1731.36 in rural Kerala and Rs.2296.16 in urban Kerala. In nominal terms, and ignoring rural-urban price differences, if any, per capita expenditure level of urban population was on the average about 33% higher than that of rural population. Chart 3.2.1 explains that all India average rural MPCE was 39% less than that of

Kerala and all India average urban MPCE was 14% less than that of Kerala. It is also seen that rural-urban difference on the per capita expenditure at national level was much greater than that of Kerala. Per capita expenditure level of urban population was on the average about 88% higher than that of rural population at national level.

Chart 3.2.1. Average MPCE : Kerala and All India

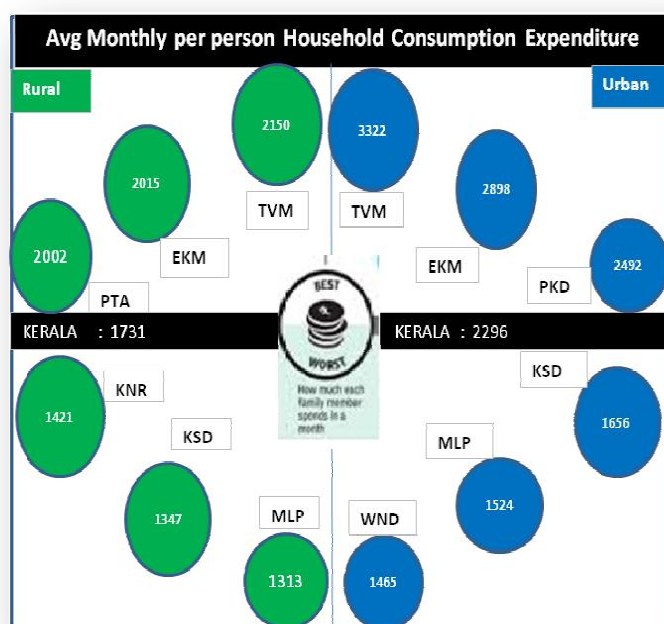

District wise MPCE is presented in chart 3.2.2. The chart says that the capital district, Thiruvananthapuram, had outdone other districts in the state by topping MPCE for both rural (Rs.2150.79) and urban (Rs.3322.80) sectors. It is also seen that rural MPCE was lowest in Malappuram (Rs.1313.06) and urban MPCE was lowest in Wayanad (Rs.1465.90).

kasaragode	1347.82	1656.64

The districts occupy the first and last three positions based on the ranking of districts by rural and urban MPCE were presented in the following figure.

Another important observation can be made from the charts 3.2.1 and 3.2.2 that per capita expenditure level of almost half of the total districts was less than that of state average both in rural and urban areas. The chart 3.2.2 also provides the information that average MPCE of most of the southern districts was greater than that of northern districts.

3.3. Household Consumption of Various goods and services in Kerala

To study the consumption pattern in much greater detail, per capita estimates in terms of quantity and value are presented in this report for 344 different items of consumption. Estimates of consumption in quantity terms are available for most items of food, clothing, bedding and fuel, but not for durables and a large number of minor “miscellaneous” articles, nor for services of any kind (including educational and medical services). Estimates of value of consumption in rupees per person per month are, however, available for every kind of item, and have been presented for every item, for rural and urban sectors of the State. Besides these estimates, number of sample households and estimates of proportion of households incurring consumer expenditure on different items are presented in this report.

It is important to note that the estimates for the items whose consumption was reported by very few sample households presented here are only for the sake of completeness. These estimates should obviously be used with more caution than estimates for items reported by a substantial number of households.

Following subsections will describe the consumption pattern of Kerala and its districts for different broad item groups.

3.3.1.Cereals

Chart 3.3.1.1 shows the state level monthly per capita consumption of cereals in quantity and value terms in 2004-05 and 2009-10. In 2009-10, monthly per capita consumption of cereals at state level was estimated 8.56 Kg in rural and 8.52 in urban Kerala. In value terms state level monthly per capita consumption of cereals was Rs. 147.99 in rural and Rs. 160.48 in urban.

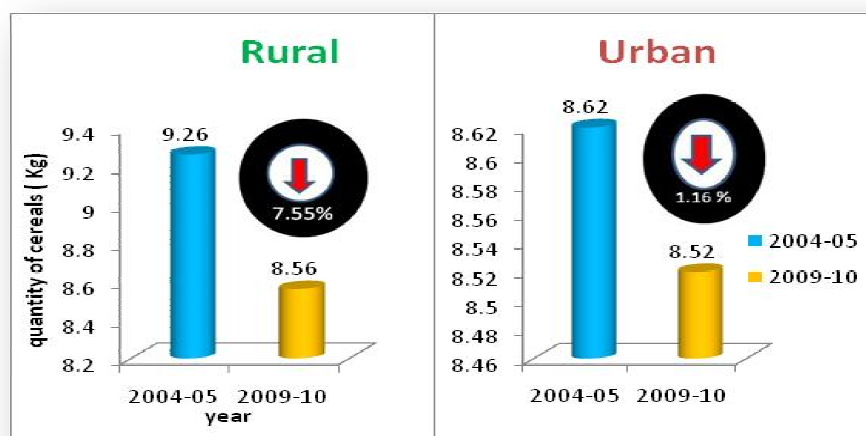

Chart 3.3.1.1 Consumption of cereals in 2004-05 and 2009-10, all-Kerala

	year	monthly per capita consumption			
		quantity (Kg)		Value (Rs)

	2009-10	8.56	8.52	147.99	160.48

There has been a decline in consumption of cereals between 2004-05 and 2009-10 in rural and urban areas of Kerala which is presented in the chart 3.3.1.2. It is seen from the chart that per capita consumption of cereals group has dropped since 2004-05 from 9.26 Kg to 8.56 Kg in rural sector (7.55 % decline) and from 8.62 Kg to 8.52 Kg in urban sector (1.16% decline).

Chart 3.3.1.2 Decline in Consumption of cereals, all-Kerala

Monthly Per Capita quantity and value of consumption of major cereals in Kerala during the survey period is presented in chart 3.3.1.3. The survey had collected information on consumption of rice & products, Wheat & products, Jowar & products, Bajra & Products, Maize & products, Barley & products, Small millets & products, Ragi & products and found that rice and wheat were the cereals commonly used both in rural and urban areas of Kerala. Chart 3.3.1.3 shows that there were only a slight variation in the consumption of cereals between rural and urban areas.

Others	0.01	0.02	0.45	0.82
Total	8.56	8.52	148.00	160.47

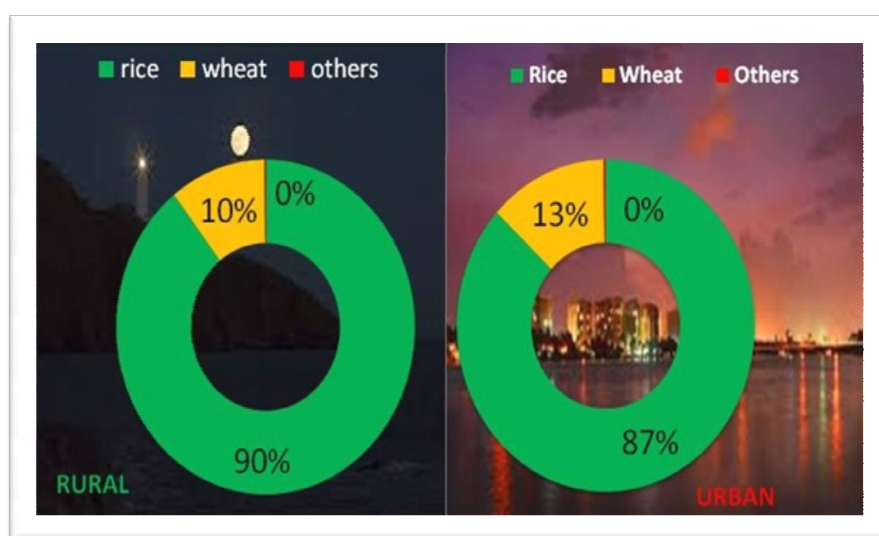

Fig 3.3.1.1 shows the composition of cereal consumption in rural and urban areas of Kerala in quantity terms. It is seen that rice accounted for 90% of consumption of cereals in rural Kerala and 87% in urban Kerala. While wheat contributed about 10% and 13% in rural and urban areas respectively, other cereals have a negligible share in the consumption of cereals as a whole. Note that rice and wheat mentioned here includes rice products and wheat products respectively.

Fig 3.3.1.1 Pattern of Cereals consumption, all Kerala

Moving to table 3.3.1.4 slight differences in cereal consumption can be observed among the districts. Monthly per capita quantity of consumption of cereals varied from 7.17 Kg (Kasragode) to 8.80 Kg (Thiruvananthapuram) in rural and 7.21 Kg (Kozhikkode) to 9.53 Kg (Alappuhza) in urban sector.

3.3.2. Pulses and Pulse Products

State level estimates of per capita consumption of pulses group in quantity and value terms in 2004-05 and 2009-10 are presented in chart 3.3.2.1. At state level, monthly per capita consumption of pulses group in 2009-10 was estimated as 0.63 Kg in rural and 0.72 Kg in urban sector. In value terms it was Rs. 34.44 in rural and Rs 39.93 in urban sector. The chart displays a decline in the consumption of pulses between 2004-05 and 2009-10 as it dropped since 2004-05 from 0.69 Kg to 0.63 Kg (8.7% decline) in rural and from 0.74Kg to 0.72 Kg (2.7% decline) in urban sector. From further examination of the chart we can see that per capita consumption of pulses in urban sector was higher than that of rural sector.

Chart 3.3.2.1 Consumption of Pulses in 2004-05 and 2009-10, all-Kerala

Note that consumption of pulses mentioned here excludes pulses only as part of meals prepared outside the household (in restaurants, in other households, etc). Chart 3.3.2.2 displays per capita consumption of most common pulse varieties: arhar, moong, masur, urd, gram(split),gram(whole), peas and khesari in terms of quantity and value for rural and urban sectors of Kerala. Full details, including district level estimates and relative standard error of estimates are available in Table 1, Appendix A. It is seen that monthly per capita consumption of an average person in urban sector of Kerala was higher than that of an average person in rural Kerala.

Figure 3.3.2.1 shows the shares of major pulses to the consumption of pulses as a whole in quantity terms. One can see almost similar pattern of pulse consumption in both rural and

urban sectors. Split gram (whole) had major share, as much as 22%, of total pulse consumption in both rural and urban areas. Urd accounted for 17%, 18% of total pulse consumption in rural area and urban area respectively. While Moong contributed 16% in rural and 18% in urban, the share of arhar,tur was 14% in rural and 13% in urban. All other pulses and pulse products had comparatively smaller share (below 10%) in both rural and urban areas.

Fig 3.3.2.1 Pattern of Pulse consumption, all Kerala

District wise consumption of pulses in rural and urban sectors of Kerala in 2009-10 is presented in table 3.3.2.1. If we rank the districts based on per capita quantity of consumption of pulses, Thiruvananthapuram (0.71 kg) and Pathanamthitta districts (.93kg) will attain the top most positions in rural and urban respectively and Malappuram will hold the bottom position in both rural and urban sectors with per capita quantity of consumption 0.38 kg and 0.31kg respectively. Figures against the districts tell us that for most of the districts per capita consumption of pulses was higher in urban sectors than in rural sectors.

3.3.3. Edible Oil

Estimates of per capita quantity and value of all Kerala edible oil consumption in 2004-05 and 2009-10 are presented in chart 3.3.3.1. It is seen that average monthly consumption of edible oil per person in 2009-10 was 0.623 Kg in rural and 0.647 Kg in urban. . In value terms state level monthly per capita consumption of edible oil was Rs. 35.26 in rural and Rs. 37.11 in urban.

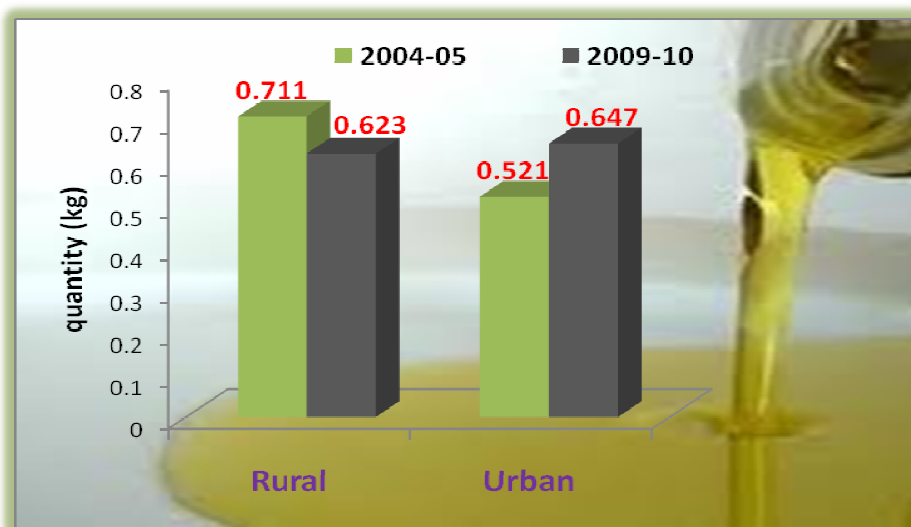

Chart 3.3.3.1 Consumption of edible oils in 2004-05 and 2009-10, all-Kerala

2009-10	0.623	0.647	35.26	37.11

One interesting observation can be drawn from chart 3.3.3.2 that monthly per capita quantity of consumption of edible oils decreased 12.4 % in rural and increased 24.18 % in urban between 2004-05 and 2009-10 as it falls from 0.711 kg to 0.623 kg in rural and raise from 0.521 kg to 0.647 kg in urban, ignoring the difference in reference periods used in 2004-05 and 2009-10. It is also seen that monthly per capita consumption of edible oils in 2004-05 was higher in rural than that in urban and had a reverse pattern in 2009-10.

Chart 3.3.3.2 Consumption of edible oils, all-Kerala

Consumption of four items of edible oils: vanaspati, mustard oil, ground nut oil and coconut oil and one residual item “edible oil: others” which includes all other edible oils such as

sun flower oil, linseed oil etc were collected in the survey. Per capita quantity and value of state level consumption of above mentioned oils for rural and urban sectors are given in chart 3.3.3.3.

Chart 3.3.3.3. Consumption of various edible oils in 2009-10, all Kerala

others	0.076	0.090	4.26	5.29
Total	0.623	0.647	35.26	37.11

Note that consumption of edible oils mentioned here excludes edible oils only as part of meals prepared outside the household (in restaurants, in other households, etc). Figure 3.3.3.1 shows the shares of various edible oils to the consumption of edible oil as a whole in quantity terms. The figure reveals that coconut oil had very large share in the consumption of edible oil as a group, 86% in rural and 85% in urban. While the contribution of vanaspati, mustard oil and ground nut oil are negligible, “edible oil: others” had 12% share in rural and 14% share in urban.

Fig 3.3.3.1 Pattern of edible oil consumption, all Kerala

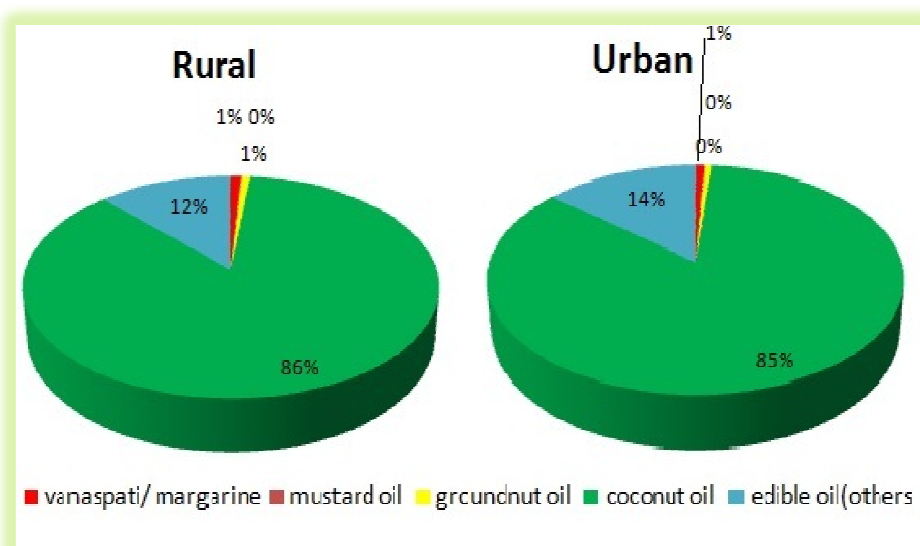

Table 3.3.3.1 provide district level estimates of consumption of edible oil group in quantity and value terms separately for rural and urban sectors. Slight differences in edible oil consumption can be observed among the districts. Monthly per capita quantity of consumption

of edible oil varied from 0.480 Kg (Kollam) to 0.718 Kg (Thrisur) in rural and 0.356 Kg (kasaragode) to 0.707 Kg (Thrisur) in urban sector.

3.3.4. Milk, Egg, Fish and Meat

Milk, egg, fish and meat, the four sources of animal-protein rich foods, all together commanded a share 27.42 % of total consumer expenditure for food items in rural and 28.93% in urban sector in 2009-10. In other words an average person in rural Kerala spent Rs. 239.11 and an average person in urban Kerala spent Rs. 239.11 for this “animal-protein rich food group”.

It is clear from the chart 3.3.4.1 that an average resident of Kerala spent more money for fish than the other items in the group as fish had a share of 13% of monthly per capita consumption expenditure for food items while others contributed below 10%. If we go through the national averages (NSS report no. 541), we can see a pattern different from the above statement that an average indian spent more money for milk and milk products than fish, egg and meat.

Chart 3.3.4.1 Monthly Per Capita Expenditure on Milk, Egg, Fish and Meat

% mentioned here are percentage of each item to total MPCE for food items

Chart 3.3.4.2 shows per capita quantity of consumption per month and percentage of households reporting consumption in 7 days of milk, egg, fish and meat in rural and urban sectors of Kerala. It may be noted that milk mentioned here includes milk products prepared in home from liquid milk. It is seen that consumption of all the items recorded in the table was higher in urban than in rural. Percentage of households reporting consumption is also seen to have same pattern except in case of fish where the number of households reporting consumption was higher in rural than in urban.

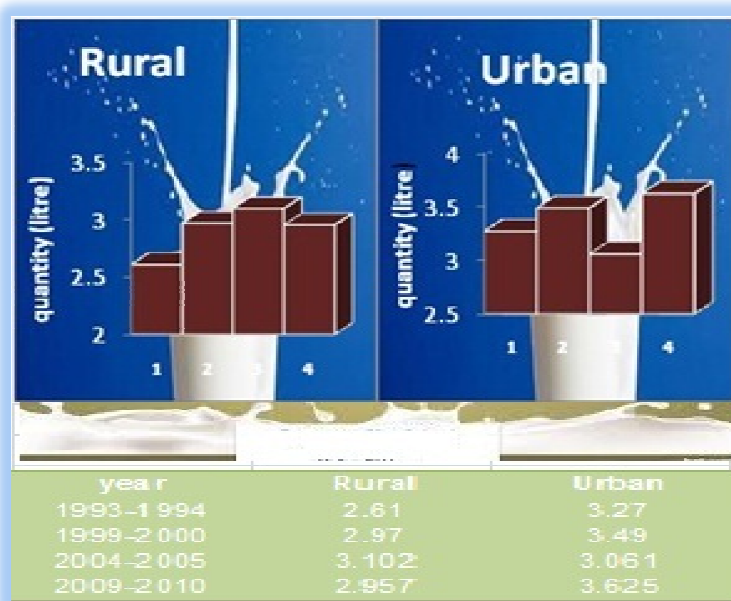

The chart reveals that while consumption of milk was reported by 75.1 % of rural and 83.1% of urban households during last 30 days preceding the date of survey, the per capita consumption of milk was 2.957 litres per month in rural Kerala and 3.625 litres in urban Kerala. In case of egg 50.4% of rural households and 54.9% urban households reported egg consumption in 7 days and per capita consumption was 3.7 and 3.9 eggs per month in rural and urban respectively. The table indicates that per capita consumption of fish, prawn was 2.467 kg in rural and 2.551 kg in urban and percentage of households reporting consumption in 7 days was 93.5 in rural and 90.3 in urban. Finally, looking at the figures against meat we can simply state that meat items like mutton, beef and chicken were not a daily food for an average resident of Kerala. *Note that for milk, figures against % of consuming households in chart 3.3.4.2 are % of households reporting consumption during the last 30 days.*

Directing our attention to the chronological data of milk consumption presented in chart 3.3.4.3, we can say that monthly per capita consumption of milk has an increasing trend though there was a dip in rural in 2009-10 and in urban in 2004-05. It may be noted that figures against the years 1993-94 and 1999-2000 are from NSS report no404 and 461 prepared by NSSO based on central sample and the figures against rest of the years are based on state sample prepared by DES.

District level estimates of consumption of Milk, egg, fish and meat are provided in table 1 of appendix A.

3.3.5. Vegetables

At state level, monthly per capita consumption of vegetables was estimated as Rs.85.32 in rural sector and Rs. 87.75 in urban sector, chart3.3.5.1says. Or to put it in another way, an average resident of rural Kerala spent 9.78% of his total food consumption expenditure and an average resident of urban Kerala spent 8.5% of his total food consumption expenditure.

Chart 3.3.5.1 Consumption of Vegetables, all Kerala

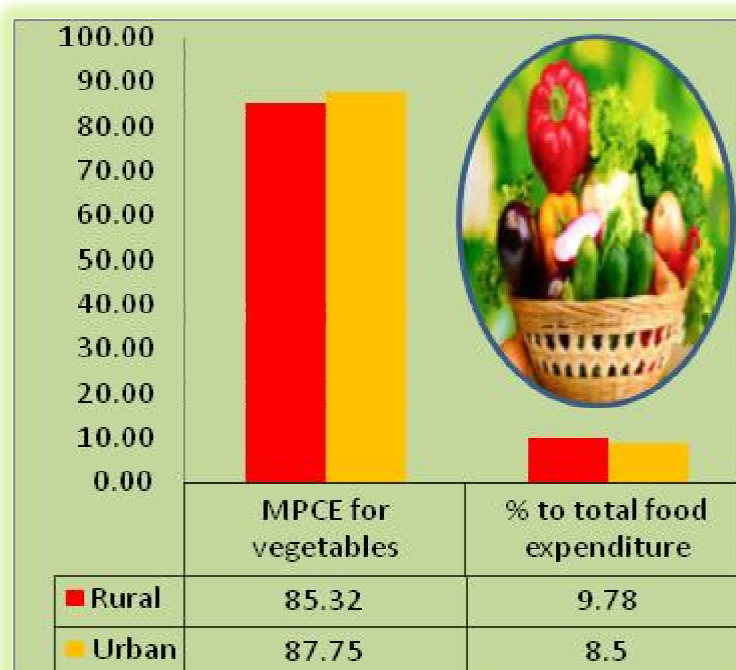

Table 3.3.5.1 shows for 19 commonly used vegetables, per capita consumption in quantity and value terms, as well as percentages of households reporting consumption during a period of 7 days, in rural and urban Kerala. Together, these variables accounted for around 83% of value of vegetables consumed in both rural and urban areas. Estimates for all other vegetables listed in schedule of enquiry are available in table 1 of Appendix A. It is seen from the table that consumption of vegetables listed here except carrot, cauliflower, french beans and lemon was more common in rural than in urban. Further, the table tells which of the vegetables were more consumed by an average resident of Kerala in 2009-10. An average resident of Kerala consumed about 700gm onion, 500gm tomato and 400gm potato per month.

3.3.6. Fruits and Nuts

The survey collected details of consumption of 18 fresh fruits including “other fresh fruits” and 9 dry fruits and nuts. Chart 3.3.6.1 tells us that these fruits and nuts altogether accounted for only 10% (Rs.87.4) of monthly per capita consumer expenditure for all food items in rural and 11% (Rs.115.53) in urban. Details of consumption of some of these fruits and nuts are shown in table 3.3.6.1.

Chart 3.3.6.1 Consumption of fruits & nuts, all Kerala

The fruits and nuts listed in the table altogether accounted for about 80% of the value of fruits and nuts consumed in both rural and urban areas. It is seen that per capita urban consumption of all commonly consumed fruits and nuts except coconut, papaya and mango exceeded rural consumption whether computed in terms of value or quantity. Rural urban disparities in consumption were relatively low in case of pineapple and coconut and very high in case of cashew nut. It is interesting to note that an average resident of rural Kerala consumed 5 bananas per month while an average resident of urban Kerala consumed 7 bananas per month.

3.3.7 Sugar, Salt and Spices

Sugar, Salt and Spices, the inevitable ingredients in Kerala's food, together commanded a share of 8.85% of consumer expenditure for food items in rural Kerala and 7.49% in Urban Kerala. It is seen from table 3.3.7.1 that an average resident of Kerala consumed around 800 gm sugar, around 250 gm salt and around 530 gm spices per month. Rural-Urban disparities in the consumption of these items were very low whether measured in terms of quantity or value. However, consumption of these items were slightly higher in urban than in rural. The table also provide information about which of the spices were more commonly used. They were dry chillies, garlic, tamarind and turmeric.

3.3.8 Beverages and Processed food

Details of major beverages “tea” and “coffee” and some processed foods are presented in this section. Details of all 6 kinds of beverages and 12 kinds of processed food listed in the schedule of enquiry are available in table 1 of appendix A. It is seen from the chart 3.3.8.1 that “tea” and “coffee” further sub divided into “tea: cups” and “tea: leaf” and “coffee-cups” and “coffee-powder” respectively- in other words into tea/coffee purchased in beverage form and tea/coffee made at home and processed foods further subdivided into two categories: those served in restaurants and those which are usually taken home and consumed. Taken together, beverages and processed food accounted for 18% of consumer expenditure for food items in rural and 20% in urban.

Chart tells us that 29% of the value of consumption of beverages and processed food in rural was contributed by tea and coffee and 37% was cooked meals. In urban sector, tea and coffee had a share of 24% and cooked meals had a share of 42% of consumer expenditure for beverages group. Looking at rural-urban figures, we can say that consumption of tea was higher in urban than in rural. But in case of coffee a reverse pattern can be observed.

The graphs using quantity and value of consumption of tea presented in chart 3.3.8.2 seems to be dissimilar and which leads to an interesting point that an average resident of Kerala(both in rural and urban) spent more money for the consumption of “tea: cups” (tea purchased in

beverage form) than “tea: leaf” (tea made at home) even though consumption of his/her “tea:cups” was less than that of “tea:leaf”.

District level estimates of consumption of beverages and processed food are provided in table 1 of appendix A.

3.3.9 Energy (excluding Vehicle fuels)

Energy (excluding vehicle fuels) used for heating, lighting and household appliances accounted for 12% (Rs.102.47) of consumer expenditure for non-food items in rural Kerala and 10% (Rs. 124.64) in urban Kerala. The survey reveals that 86% of fuel expenditure was contributed by firewood and chips, electricity, kerosene and L.P.G. Details of these items are presented in chart 3.3.9.1 and chart 3.3.9.2. Details of all other items including district level estimates are available in table 1 of appendix A.

Chart 3.3.9.1 monthly per capita expenditure on important household fuels (Rs.)

It is clear from chart 3.3.9.1 that an average resident of Kerala spent major share of his/her fuel expenditure for firewood and chips followed by electricity, L.P.G. and kerosene. In urban the picture is different, the above mentioned order was electricity, firewood and chips, L.P.G. and Kerosene.

Directing our attention to monthly per capita quantity of consumption in chart 3.3.9.2 we can state that consumption of firewood and chips and kerosene were higher in rural than in urban while consumption of electricity and L.P.G. were higher in urban than in rural. Moving to the last two columns in the chart we can see that nearly 98% households in urban and over 95% households in rural areas reported consumption of electricity for household use during the last 30 days.

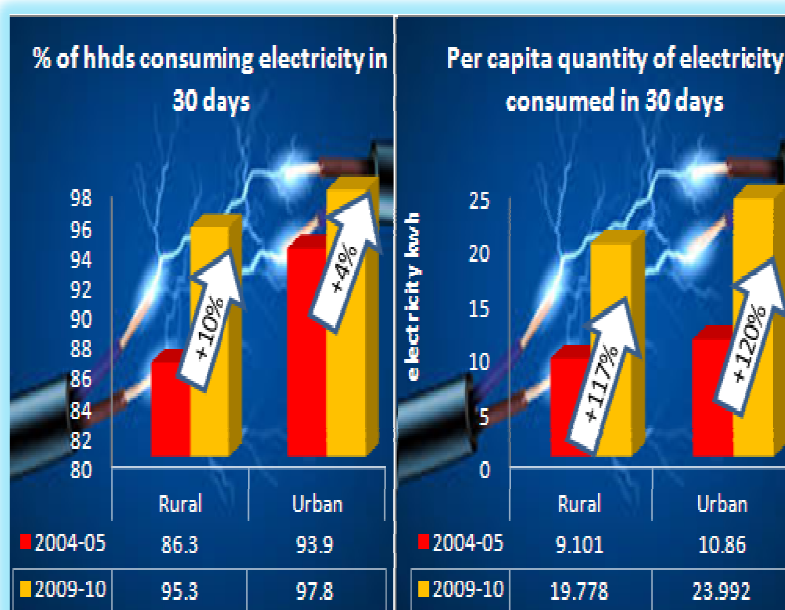

Chart 3.3.9.3 displays changes in consumption of LPG between 2004-05 and 2009-10. The rural sector shows an increase of 18% in the percentage of LPG consuming households and 10% increase in the quantity of per capita LPG consumption in 30 days. In the urban sector percentage of LPG consuming households shows a rise of 21% and quantity of per capita LPG consumption in 30 days shows a rise of 10% during the 5 year period. Note that figures against the year 2004-05 were taken from the report on National Sample Survey 61st round, Household consumer expenditure, published by DES.

Chart 3.3.9.3 Changes in consumption of LPG between 2004-05 and 2009-10

Like LPG, graphs of percentage of households consuming electricity and per capita quantity of electricity consumed in 30 days along with corresponding data are presented in chart 3.3.9.4. It is seen that percentage of households consuming electricity increases 10% in rural and 4% in urban from 2004-05 to 2009-10. In case of quantity of consumption of electricity the rise is very high, 117% in rural and 120% in urban. Here also the figures against the year 2004-05 were taken from the report on National Sample Survey 61st round, Household consumer expenditure, published by DES.

3.3.10 Clothing

The survey had collected information on consumption of clothing during 365-day period and estimated that monthly per capita expenditure for clothes in rural Kerala was Rs. 72.62 and in urban Kerala was Rs.91.91. The clothing expenditure accounted for 8.45% of consumption expenditure for non-food items in rural and 7.27% in urban. The main components of clothing expenditure are presented in figure 3.3.10.1 and chart 3.3.10.1.

Fig 3.3.10.1 Consumption expenditure on clothing, all Kerala

Shares of readymade garments, sari and cloths for trousers were greater for urban Kerala than for rural Kerala and shares of dhoti, lungi and cloths for shirts were greater for rural than for urban, figure shows. Chart 3.3.10.1 tells us that an average resident of rural Kerala spent Rs.14.27 for sari and Rs.21.15 for readymade garments per month while an average resident of urban Kerala spent Rs.20.17 for sari and Rs.30.48 for readymade garments per month

3.3.11 Education

Educational expenditure commanded 7.33% share (Rs.63.02) in total non-food expenditure in rural Kerala and a share of 9.22 % (Rs. 116.59) in urban Kerala. Concentrating rural-urban disparities, we can say that per capita educational expenditure in urban sector was almost double than that in rural sector. It is clear from the table 3.3.11.1 that educational expenditure which includes expenditure on newspapers, stationery and books of all kinds apart from school and college education expenses was reported by about 73% of rural and 84% of urban households.

As the table shows, books, journals (2nd hand), library charges and educational CD were the minor components of educational expenses and the largest component was tuition and other fees, which had a share of 47% in rural sector and 54% in the urban sector. Private tuition contributed 12% to educational expenditure in both sectors.

3.3.12 Medical Care

As explained in chapter 2, expenditure on medical care has two components: institutional and non-institutional. The distinction between institutional and non institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Data were collected with a reference period of 365 days for the institutional component and 30 days for other.

Institutional and non-institutional medical expenses all together accounted for 14% of expenditure for non-food items in rural Kerala and 12% in urban Kerala. Table 3.3.11.1 shows that institutional medical expenditure during 365 days was reported by 26% of rural and 28% of urban households. It is seen from the table that 46% (Rs.22.53) of institutional medical expenses

in rural sector and 45% (Rs.26.63) in urban sector was contributed by medicine. Rural- urban figures in the table point out that institutional medical expenditure was little bit higher in urban than in rural.

Table 3.3.12.2 provides information on non-institutional medical expenditure during 30 days. It is seen that non-institutional medical expenditure of an average resident of Kerala was greater than his/her institutional medical expenditure. The major component of non-institutional medical expenditure was medicines which had a share of 83 % of non-institutional medical expenditure in both rural and urban sectors. Non-institutional medical expenditure during 30 days was reported by 73% of rural and 70% of urban households.

3.3.13. Consumer Services and Miscellaneous goods

Consumption data on group “Miscellaneous goods and services” in value terms were collected with a reference period of “last 30 days”. The group includes transport, minor entertainment goods, toiletry, various household consumables and petty durables and hired accommodation besides non-institutional medical care. For this category of items, no data on quantity consumed were collected. The expenditure on these items is, of course, affected by price movements, and the real change over time in consumption of any of the items cannot be separated out from the change in expenditure incurred. Nevertheless, the growth of expenditure on any of these items relative to the growth of total consumption expenditure throws light on the increase or reduction in importance of the item over time.

Change in per capita expenditure (in nominal terms), and the change in proportion of households incurring expenditure on the selected items of the “miscellaneous” category in rural and urban Kerala between 2004-05 and 2009-10 are presented in table 3.3.13.1. The change in per capita expenditure on all consumption items (MPCE) is also shown, using the MRP reference period for both 2004-05 and 2009-10. For items which appear above the “all consumption items” row, the growth in per capita expenditure has been faster than the growth in overall MPCE, implying that the budget share of the item has increased. For items below the “all consumption items” row, the growth in per capita expenditure has been slower than the growth in overall MPCE, implying that the budget share of the item has fallen over the 5-year period. The increasing proportion of households incurring expenditure has also been computed as a percentage; thus, a figure of 100 in last column would mean that the proportion of households incurring expenditure on the relevant item has doubled, and a figure of minus 50 would mean that the proportion has been halved.

It may be noted that the estimate for “all consumption items” given in table 3.3.13.1 is the Mixed Reference Period (MRP) estimate based on Schedule Type 1 for both rural and urban sectors, which was canvassed in a different sample of households from the sample on which this report is based. Because of this, the estimates for “all consumption items” shown in Table 1 of appendix A differ from those shown in Table 3.3.13.1. The reason for giving the MRP estimates in Table T16 is to ensure comparability of estimates of “all consumption items” across rounds 61 (2004-05) and 66 (2009-10).

Table 3.3.13.1 changes since 2004-05 in nominal expenditure on selected miscellaneous goods and services, all Kerala.

Table 3.3.13.1 throws lights on certain facts which are presented in the following chart.

Rural per capita expenditure on cable TV subscription increased in 2009-10 to more than double times(115%) the same in 2004-05. per capita expenditure on cable TV subscription in urban Kerala increased about 1.8 times (81%) during the same period.

% of households subscribing cable TV connection was also increased in 2009-10 when compared to 2004-05 , 105% in rural and 62% in urban.

Both in rural and urban sectors, telephone expenditure per person in 2009-10 was almost double than that in 2004-05. In case of 2009-10, it is important to note that mobile phones accounted for around 62% of rural expenditure and 65% of urban expenditure.

While 55% of the rural households reported telephone expenditure in 2004-05 , the proportion of households in 2009-10 reporting expenditure on mobile phones alone was about 82%. In case of urban the above mentioned percentages are 58% and 88% respectively.

Rural per capita expenditure on taxis and autorickshaws rose by 34% between 2004-05 and 2009-10.

Urban per capita expenditure on taxis and autorickshaws rose by 63% between 2004-05 and 2009-10

Rural per capita petrol expenditure rose in 2009-10 to about Rs. 35, 1.67 times its level in 2004-05. Petrol per capita expenditure in urban increased about 2.95 times during the same period from Rs.26.91 to Rs.79.25.

While % of increase in households reporting petrol expenditure between 2004-05 to 2009-10 in rural and urban sector were about 16% and 66% respectively.

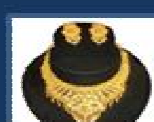

3.3.14. Durable goods

The consumer expenditure survey schedule listed 51 items of durable goods in order to help the informant to recall and report each item on which expenditure was incurred. Per capita expenditure on durable goods including expenditure on construction, repair and maintenance of such goods was estimated as Rs.76.51 (9% of MPCE for all non-food items) in rural Kerala and

Rs.165.05 (13% MPCE for all non-food items) of in urban Kerala. Details of expenditure on some important durable goods are presented in table 3.3.14.1. Details of all other durable goods are available in table 1 of appendix A.

It is seen that urban monthly per capita expenditure of all items mentioned in table 3.3.14.1 was greater than their rural monthly per capita expenditure. MPCE for “durable: total” in urban sector was about 2.16 times its value in rural sector. Gold ornaments seem to have highest share in durables expenditure as this was estimated nearly 35% in rural and 30% in urban. Cost of repair and maintenance of residential buildings made up nearly 28% of per capita expenditure on durables in rural Kerala, compared to 25% in urban Kerala. In urban Kerala, motorcars, too, had a share of over 20% and motorized two-wheelers had a share of 6%. In rural Kerala motorized two-wheelers accounted for 4% of durable goods expenditure, motor cars and jeeps for 7%, and bicycles for 0.5%. Mobile phone handsets made up 3% of expenditure on durables in both rural and urban sectors. Note that all expenditure figures, as well as percentage of households reporting expenditure, take into account not only expenditure on purchases but also expenditure on construction, repair and maintenance.

3.4 Conclusion

In the preceding section, consumption pattern of major item groups were discussed. To summarise, share of each 20 major item groups are presented in chart 3.4.1 separately for rural

and urban sectors. The Chart gives an idea about how an average resident of Kerala spent his/her money for consumption of various goods and services in a month. It is seen that he/she spent more money for egg, fish and meat followed by beverages and cereals compared to other item groups.

**SAMPLE DESIGN
and
ESTIMATION
PROCEDURE**

Sample Design and Estimation Procedure

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1st July 2009 to 30th June 2010.

2. Outline of survey programme

2.1 **Subject coverage:** The 66th round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61st round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Poonch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2009 and ending on 30th June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61st round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

2.5 Participation of States: In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

3. Sample design

3.1 Outline of sample design: A stratified multi-stage design was adopted for the 66th round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

3.2 Sampling frame for first stage units: *For the rural sector*, the list of 2001 Census villages (henceforth the term 'village' will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

3.3 Stratification: Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

3.4 Sub-stratification: Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers (p) $> 2P$ (where P is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

3.5 Total sample size (FSUs): At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a

minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

3.8 Allocation to strata/sub-strata: Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

3.9 Selection of FSUs: For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

3.10 Formation and selection of hamlet-groups/sub-blocks

3.10.1 Criterion for hamlet-group/sub-block formation: Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact ‘hamlet-groups’ (having more or less equal population) in the rural sector and ‘sub-blocks’ in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

3.10.2 Selection of hamlet-groups/sub-blocks: Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61st round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2: For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
Rural			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
Urban			
SSS 1	households having MPCE of top 10% of urban population ($MPCE > B$)	2	1
SSS 2	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3	households having MPCE of bottom 30% of urban population ($MPCE < A$)	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k^{th} household in the j^{th} second stage stratum of the d^{th} hg/sb (d = 1, 2) of the i^{th} FSU belonging to the m^{th} sub-sample for the t^{th} sub-stratum of s^{th} stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

7.2.1 Rural

(i) For j^{th} second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) will be obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

7.2.2 Urban

(i) For j^{th} second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note: $N = 1$ in the above formula in the case of Leh and Kargil districts of J&K.

7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate \hat{Y} at the State/UT/all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/UT/all-India.

7.5 Estimates of ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) was obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

7.6 Estimates of error

The estimated variances of the above estimates were as follows:

7.6.1 For aggregate \hat{Y}

$Var(\hat{Y}) = \sum_s Var(\hat{Y}_s)$ where $Var(\hat{Y}_s)$ is given by

$Var(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$ for rural stratum, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$Var(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$ for urban stratum, \hat{Y}_{s1} and \hat{Y}_{s2} being the stratum estimates for sub-sample 1 and 2 respectively.

7.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[(\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

7.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{smj}} \times \frac{1}{z_{smi}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{Z_{st}}{n_{smj}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$,	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$,

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, $D_{smi}^* = 0$ in the relevant multipliers and there was only one multiplier for the village (see paragraph 7.2.1.1).
